Vorwort

In den letzten Jahren ist das Angebot an Datenbanken, besonders in Europa, stark gestiegen. Daran sind zu einem erheblichen Teil die Länder der Europäischen Gemeinschaft beteiligt.

Angesichts der Vielzahl der Quellen und Hersteller ist es deshalb nicht einfach, sich die gewünschten Informationen zu beschaffen.

Eurostat hat sich im vorliegenden Katalog die Aufgabe gestellt, in einem Teilbereich das Angebot an Datenbanken transparent zu machen. Dank der Mitarbeit von ca. 30 Nationalen Statistischen Ämtern und Internationalen Organisationen sind über 80 Datenbanken erfaßt und dargestellt worden. Ausschließlich öffentlich zugängliche Datenbanken der „Amtlichen Statistik“ sind in diese Dokumentation aufgenommen worden.

Die in den Datenbanken gespeicherten Informationen decken nahezu alle Bereiche der Volkswirtschaft ab.

Nicht immer sind Datenbanken unterschiedlichen Benutzerkreisen in allen Formen zugänglich. Es wurde versucht, möglichst genau zu beantworten, über welchen Anbieter und in welcher Form der jeweilige Benutzer die Information beziehen kann.

Dieses Verzeichnis wendet sich an einen internationalen Abnehmerkreis, es soll die Kommunikation untereinander verbessern und das Informationsbedürfnis innerhalb der EG-Mitgliedstaaten, der EFTA-Länder und der Staaten Mittel- und Osteuropas erfüllen.

Eventuelle Korrekturen und Ergänzungen senden Sie bitte an:

Preface

The number of databanks has risen sharply over the past few years, particularly in Europe. This increase is attributable in large part to the countries of the European Community.

In view of the large number of sources and data producers, it is not easy to obtain the information one requires.

Through this catalogue Eurostat has endeavoured to provide an overview of the databanks available in one particular field. With the assistance of some 30 national statistical offices and international organizations, over 80 databanks have been identified and presented. These include only publicly accessible databanks within the field of 'official statistics'.

The information stored in the databanks covers virtually all sectors of the economy.

Databanks cannot always be accessed in all forms by different user groups. Every effort has been made to specify as precisely as possible via which hosts and in what form users can obtain the information they require.

This directory is intended for an international public. It aims to improve communication and meet the requirement for information within the EC Member States, the EFTA countries and the countries of central and eastern Europe.

Any corrections or additions should be sent to

Eurostat

Avant-propos

Ces dernières années, l'offre de banques de données a fortement augmenté, en particulier en Europe. Les Etats membres de la Communauté européenne prennent une part considérable dans cette évolution.

Compte tenu de la multitude des sources et du grand nombre de producteurs, il n'est pas simple d'obtenir les informations que l'on souhaite.

Avec le présent catalogue, Eurostat s'est fixé pour tâche de rendre transparente l'offre de banques de données dans un secteur déterminé. Grâce à la collaboration de quelque 30 Offices statistiques nationaux et d'organisation internationales, il a été possible de répertorier et de présenter plus de 80 banques de données. Cette documentation regroupe exclusivement les banques de données de la «statistique officielle» accessibles au public.

Les informations mémorisées dans les banques de données couvrent la quasi-totalité des secteurs économiques.

Les banques de données ne sont pas toujours accessibles sous toutes les formes aux divers groupes d'utilisateurs. On s'est efforcé d'indiquer aussi précisément que possible aux différents utilisateurs sous quelle forme et par l'intermédiaire de quel serveur l'information peut être obtenue.

Ce répertoire s'adresse à un public international et a pour but de faciliter la communication entre les utilisateurs et de combler le besoin d'informations dans les Etats membres des Communautés européennes, dans les pays faisant partie de l'AELE et dans les pays d'Europe centrale et orientale.

Les éventuels rectifications et compléments d'informations sont à envoyer à :

INFORMATION:

ISIS is the Austrian national statistical databank. Most of the data stored on it stem from surveys carried out by the Austrian Central Statistical Office; a smaller part of the data stems from external

sources such as the National Bank. ISIS consists of sequential files, which include microdata (no on-line access) and direct access files which include segments for online access.

Segments are multidimensional tables in which up to 6 criteria and time as an additional dimension are linked together as cross tables. Segments are derived from aggregating microdata.

Volume: Online: about 4 050 segments (= multidimensional tables) c. 4 gigabytes; microdata: c. 20 gigabytes

Time period: earliest data: 1869 (Census) to the present day

Updating period: monthly, quarterly or yearly (depending on the data)

NAME OF DATABANK:

GEOSTAT: Geokodierte, raumrelevante, statistisch-geographische Informationen
Geocoded, spacially relevant, statistical-geographical information

DOMAINS:

- land cover and land utilization
- administrative and political boundaries
- elevation, slope, exposition: Digital Terrain Model
- population, households, buildings and apartments, employ-

ment (data from Swiss Population Censuses)

- geology, geomorphology, soils
- lakes and waterways
- planning regions
- nature protection areas
- traffic and communication lines (planned)

REGIONAL BREAKDOWN:

All information is geocoded and stored in a geographic information system (GIS). Some data are vector-based, usually digitized from maps of 1: 25,000 scale, others are raster-oriented with 100X100 m grid cells. In general, spatial resolution is assumed to be around 100 m or better. Any arbitrary geographic or regional data

subsets can be generated according to user requirements (i. e. communities or cantons as well as e. g. 'all land areas within 1 km distance from lakes larger than 5 square km').

INFORMATION:

GEOSTAT collects digital geographic data from many governmental and some private data suppliers and maintains a consistent, comprehensive data base where this information can be viewed, analysed, and printed in combination. Data subsets in digital form as well as in the form of lists, tables and graphs, data combinations, and data analyses are provided by the GEOSTAT users communication group to the Swiss federal administration, to cantonal and local authorities, to students, universities and schools, and to interested private companies as well as individuals.

The GEOSTAT data base – which is still in an early stage of being established and assuming its target

function in an operational manner – comprises presently about 10 relevant layers of data covering entire Switzerland.

More detailed information is available in a periodically updated Users Handbook (in german or french).

Time period: covered ranges from about 1970 until present.

Updating: cycles vary according to the type of information and according to the priorities of the original data suppliers.

INFORMATION:

CSO DATABANK is the service offered by the Central Statistical Office (CSO) to users of macroeconomic time series data who wish to use information in computer-readable form.

CSO DATABANK currently contains about 17,500 annual, quarterly or monthly time series, some seasonally adjusted.

These series are prepared by a wide variety of sources including the CSO itself, other Government Departments and the Bank of England.

The data available through the Databank cover the main economic indicators, their components and most of the other major statistical series published for example in *Economic Trends*, *Monthly Digest* and *Financial Statistics*.

CSO does not offer an online service but a list of hosts offering this facility is available on request.

Volume: 17,500 time series

Periodicity: monthly, quarterly and annual

Updating: on release of figures by CSO

INFORMATION:

NOMIS is the Employment Department's online system housed at the university of Durham. It currently contains local data over employment, unemployment, vacancies and population. Other

data sets (cf Education, tables from the Labour Force Survey) will be added shortly.

Currently there are 400 users from government departments local government, universities and polytechnics, commercial sector. A small charge is made for accessing the database. Tables can be built up to provide data on specific areas of interest.

Maps can also be produced.

The database can be accessed by Microcomputers.

Volume: 24 GBytes

Time period: 1971-date

Updating: From Government Departments. Aim is to online data at publication date
