Foreword

1. Introduction

Trade statistics – both detailed and general results – have proved their worth. They are an instrument of prime importance for both public and private users. For instance, they enable Community authorities to prepare for multilateral and bilateral negotiations on common trade policy, they help European businesses carry out market surveys and thus improve their competitiveness and they are an essential source of information for statistics on the balance of payments, the national accounts and short-term economic studies. This non-exhaustive list highlights the variety of users and their requirements.

The yearbook on external and Intra-European Union trade, published by Eurostat in the A series, Yearbooks, sets out to provide data on long-term trends in the trade of the European Union (EU) and its Member States. It contains data on the trade flows, broken down by major product group, of the EU with its main trading partners on the one hand and between the Member States on the other. Using a modernized production tool, this new version of the yearbook aims to provide the reader with more information, in a more readable format.

This publication comprises seven parts:

- Analysis of recent trends in European Union trade
- The European Union and world trade
- The trading partners of the European Union
- Goods traded in Extra-EU trade
- Goods traded in Intra-EU trade
- The Member States and EU trade
- The external trade of the Member States

The environment in which trade statistics are collected has changed radically in recent years, leading to a detailed revision of the regulations. For statistics on trade with third countries, the introduction in 1988 of the Combined Nomenclature of goods (CN) and the Single Administrative Document led to considerable methodological changes. However, the major change came with the introduction of the Single Market on 1 January 1993. With the abolition of customs formalities between the Member States, the traditional source of trade statistics, came the introduction of a special collection system called INTRASTAT.

While the first four parts (partially in the case of the first one) refer exclusively to EU trade (taken as a whole) with

third countries, a comparison is made in the last two parts between the statistics on Intra-EU trade and those on Extra-EU trade. However, since the creation of Intrastat, the two types of statistics follow discrete methodologies and their aggregation may, therefore, involve risks.

Statistics on external trade and Intra-EU trade at the most detailed classification level are published monthly on CD-Rom (Series B: Intra and Extra-EU trade). They are also available on-line from the Comext database.

2. Intra-EU trade

Statistics on trade between the Member States are based on Council Regulation (EC) N° 3330/91 of 7 November 1991 and on the various implementation regulations which have supplemented it or laid down rules on methodology, thresholds and forms. The system set up for the collection of information on trade between the Member States as from 1 January 1993 is commonly known as Intrastat. Its main features are:

- monthly statistical declarations sent directly by businesses to the competent national authorities;
- a system of thresholds abolishing all statistical formalities for almost two thirds of businesses;
- a close link with the tax system.

With the introduction of this new system, the comparability of Intra-EU results before and after 1 January 1993 is limited, owing to a degree of under-estimation of flows. This is because of some businesses' failure to respond and the introduction of thresholds which exclude the smallest businesses. To correct this under-estimation, which varies according to the Member State, some countries make adjustments at an aggregate level (in general by partner country). Arrivals, i.e. imports from other EU countries, are particularly under-estimated. Consequently, Eurostat considers dispatches now to be the most reliable gauge of Intra-EU trade.

If the dispatches of a given Member State are compared with the corresponding arrivals of its partners, differences may emerge, mainly for the following reasons:

- the effect of the thresholds: a business may be obliged to provide statistical information in one Member State while its client or supplier, depending on the case, in the partner country may be exempted from providing any or certain types of statistical information (e.g. product

classification), thus preventing comparison at the most detailed level;

- the link with tax: a time-lag between the recording of dispatches and that of the corresponding arrivals may result from the link with tax. In addition, for certain special transactions (e.g. triangular transactions or outside processing) distortions may arise because of the difficulty in obtaining information on the partner country or on the statistical value of the goods. Tax fraud may have an effect, which is difficult to assess, on statistical declarations (under-assessment of arrivals, over-assessment of dispatches, or failure to make a declaration);
- there may be other reasons for discrepancies (goods classified under different headings of the product nomenclature, different statistical values for dispatches and arrivals, etc.) and in addition there may be mistakes or omissions which are unavoidable despite the constant efforts by Eurostat and the Member States to improve the quality and timeliness of statistical information.

3. Extra-EU trade

Member States send to Eurostat statistics on trade outside the European Union in accordance with a uniform methodology provided for in Council Regulation (EEC) No 1736/75 and the regulations deriving from it.

External trade statistics are usually recorded on the basis of customs declarations submitted by the declarant when clearing customs. The Single Administrative Document is used for this purpose. In some Member States, certain businesses are allowed to make a summary declaration.

Statistics on external trade and Intra-EU trade are compiled on the basis of Community regulations. The same regulations are generally the basis for the compilation of statistics published nationally by each Member State. Nevertheless, methodological differences do arise and consequently Community statistics and national statistics do not match exactly.

Methodological notes and sources

1. Data sources

The tables in this publication on EU trade and that of the Member States were compiled by Eurostat using the detailed data forwarded by the Member States. Eurostat would like to take the opportunity to thank the departments concerned in the Member States for their cooperation, which makes it possible to compile these harmonized statistics and guarantee their quality.

The tables describing the development of external trade as declared by the main EU trading partners were compiled from data taken from the tapes sent each month by the International Monetary Fund.

2. Coverage

2.1 Intra-EU trade

Statistics on trade between the Member States cover the arrivals and dispatches of movable property recorded by each Member State. Arrivals and dispatches are defined as follows:

- *arrivals* are goods in free circulation within the European Union which enter the statistical territory of a given Member State;
- *dispatches* are goods in free circulation within the European Union which leave the statistical territory of a given Member State to enter another Member State.

Goods placed under the customs arrangements of inward processing or processing under customs control (for working, processing, or repairs) are also regarded as arrivals or dispatches.

Consequently, statistics on trade between the Member States do not cover goods in transit or trade between Member States and the French overseas departments or the Canary Islands.

2.2 Extra-EU trade

Statistics on trade with third countries cover movable property imported and exported by the European Union. The definitions are as follows:

- *imports* are goods which enter the statistical territory of the European Union from a third country and are placed under the customs procedure for free circulation (as a general rule goods intended for consumption), inward processing or processing under customs control (goods for working, processing or repair) immediately or after bonded warehousing;
- *exports* are goods which leave the statistical territory of the European Union for a third country after being placed under the customs procedure for exports (definitive export) or outward processing (goods for working, processing or repair).

Statistics on trade with third countries do not, therefore, include goods in transit or those placed under a customs procedure for bonded warehousing or temporary entry (for fairs, exhibitions, tests, etc.) nor do they include re-export following entry under one of these procedures.

The field covered by statistics on trade with third countries corresponds to "special" trade. This method of accounting differs from that of "general" trade, which includes all goods entering the statistical territory and those leaving it, with the exception of goods in transit. Goods placed in bonded warehouses and exports of goods after bonded warehousing are included in the definition of general trade.

3. Statistical data

3.1. Statistical territory

The statistical territory of the European Union comprises the customs territory of the European Union, excluding the French overseas departments (Guadeloupe, Guyane, Martinique and Réunion) and the Canary Islands, which are therefore considered as third countries. Likewise, Greenland, Ceuta and Melilla are not covered, nor are the overseas countries and territories which are not part of the EU customs territory.

From October 1990, the external trade data of Germany refer to the Federal Republic of Germany in its borders as of 3 October 1990, i.e. after reunification.

3.2. Trading partners: countries and economic areas

The results are broken down by country and area in accordance with the "Country nomenclature for statistics on European Union external trade and trade between its Member States", referred to as the Geonomenclature (Geonom). For the purposes of presenting the results, Eurostat has defined geographical and economic areas.

In the case of exports (or dispatches), the country (or Member State) of final destination of the goods is the partner country.

The trading partner in the case of an Intra-European Union arrival is always the country of consignment of the goods, even when the goods originate in third countries and have been placed in free circulation in the country of consignment. For imports (Extra-EU trade) the statistics show, except in certain cases (returned goods, works of art, etc.), the country of origin. Where two or more countries were involved in the production of certain goods, the country where the final processing or substantial working took place is considered to be the country of origin.

3.3. Goods classification

The most detailed results published by Eurostat and accessible to the public on magnetic medium are broken down according to the subheadings of the Combined Nomenclature (CN). This tariff and statistical nomenclature is based on the international nomenclature of the Harmonized System (HS) and comprises around 10 000 eight-digit codes.

In this publication, the results are broken down by the sections and divisions of the UN Standard International Trade Classification (SITC Rev. 3 since 1988) by means of conversion tables drawn up by Eurostat on the basis of the CN.

3.4. Estimate of the statistical value

Although the data are collected in units of national currency, the values set out in this bulletin have been expressed, after conversion, in European Units of Account (ecus). The ecu is a "basket" currency unit based on the market exchange rates of a specific quantity of each European Union currency according to a weighting system involving the five-year average of each Member State's gross national product and Intra-EU trade balance. The rates used in this bulletin are averages of daily rates. The Annex to the bulletin contains a table showing the conversion rates used.

3.4.1 Intra-European Union trade

The statistical value is based on the assessment basis for taxation purposes or the transaction value of the goods. It is the FOB (free on board) value for dispatches and the CIF (cost, insurance, freight) value for arrivals. It comprises only those subsidiary costs (freight and insurance) which relate, for dispatches, to the journey within the territory of the Member State from which the goods are dispatched and, for arrivals, to the journey outside the territory of the Member State into which the goods enter.

In the case of arrivals or dispatches under an inward or outward processing arrangement and those for outside processing, it is always the total value of the goods that is recorded and not simply the added value.

3.4.2 Extra-European Union trade

The statistical value is based on the customs value or, failing that, the transaction value of the goods. It is the FOB value for exports and the CIF value for imports. It comprises only those subsidiary costs (freight and insurance) which relate, for exports, to the journey within the territory of the Member State from which the goods are exported and, for imports, to the journey outside the territory of the Member State into which the goods are imported.

In the case of imports or exports under an inward or outward processing arrangement and those for outside processing, it is always the total value of the goods that is recorded and not simply the added value.

3.5 Statistical secrecy

Most Member States take measures to guarantee the confidentiality of certain flows of goods. The legislation, the procedures for implementing it, and the range of goods subject to secrecy vary from one Member State to another.

This confidentiality applies to the most detailed level of the classification used for collecting the data: it may therefore refer to all or only part of a subheading of the Combined Nomenclature. Similarly, confidentiality may apply to imports only or to exports only and to only some of the variables recorded (value, statistical procedure, quantities, partner country, etc.).

Measures are taken during collection and during processing by Eurostat to minimize the effect of these headings on the results; therefore trade data under these headings are included at higher levels of aggregation and in totals.

4. Indices

4.1. Introduction

Changes over time in the value of trade are influenced by changes in prices and the quantities marketed. Eurostat calculates Fisher's annual chain indices to measure these two effects. This publication sets out the indices calculated according to the SITC for each Member State on a strictly comparable basis. These indices may be consulted on the TREND database.

4.2. Data sources

The data transmitted for external trade and Intra-European Union trade statistics are used at the most detailed level for calculating the indices. The indices of unit values (values divided by quantities) are used as price change indicators. The computer programs contain a system for automatically identifying extreme unit values pointing to unlikely price movements.

Two rules are applied to exclude unlikely price behaviour. The first is that, given the general level of inflation, the price of a product will not change significantly compared with its level the previous year. Any change of five points or more is considered suspect. The second rule – which is more restrictive – is that the change in the price of a product compared with the closest month available will not differ significantly from the average change in the price of similar products. The application of these rules prevents extreme changes due to factors unrelated to prices which, otherwise, would lead to a distortion of the unit value index. For products whose unit values are rejected, the changes are drawn up according to those of similar products.

Symbols and abbreviations used

Comments

1. Extra-EU trade

1.1 Total extra-EU trade flows

The trend for the last thirty-six years shows that extra-EU trade increased from 1960 to 1996, and only in 1986 and 1987 (partly due to exchange rate movements and the drop in the price of raw materials) did the volume of trade decrease. However, as the figures are measured in nominal terms, it is sometimes difficult to assess the

actual size of the increase, especially when there has been high inflation as in the 70s.

With regard to the extra-EU balance, since 1960, extra-EU trade has generally shown a structural deficit and only since 1993 has there been a shift to a surplus.

Source: Eurostat-Corext

Between 1960 and 1975, in a period of economic growth and relative price stability, the average annual growth rate in extra-EU exports was 10.9%. In the next period, 1975-1985, the rate was even higher: 12.5%. Nevertheless, as mentioned above, when there is no price stability, growth rates become more difficult to evaluate if they have been calculated from current figures.

During the period 1985-1996, the average annual growth rate for extra-EU exports was only 4.8%. This figure is due to the combination of stagnation during the 2nd half of the 80s, a sluggish trend during the early 90s and a sharp upturn in EU sales to non-member countries starting in 1993. In actual fact, in 1996 extra-EU exports were quite dynamic, with a growth rate of 8.9% over the previous year.

Among the Member States, except at the beginning of the period under consideration,

Germany has always been the main extra-EU exporter, accounting for 28.3% of the total in 1996, and reaching a peak in 1991 with 30% of total exports. France, Italy and the United Kingdom follow with shares of 14.5%, 14.2% and 13.8% respectively in 1996. However, it must be pointed out that Italy and the United Kingdom had very different results between 1960 and 1996. On one hand, Italy had remarkable growth in its extra-EU exports share from 8.1% in 1960 to 14.2% in 1996 (very close to France in the final year). On the other hand, the United Kingdom's share fell sharply from 30.5% in 1960 to 13.8% in 1996.

In the last period analysed: 1985-1996, the total share of the four leaders remained almost stable from 71.2% to 70.8%, because the reduction in the German, French and British share was offset by the Italian increase.

With regard to extra-EU imports, the general trend has been an increase since 1960, but the growth rates have been quite different depending on the period under consideration. Between 1960 and 1975 the average annual growth rate was 10.8%, while in 1975-1985 with a sharp rise in primary goods prices, it was 11.7%. During the more recent period, 1985-1996, in which inflation was lower and the prices of raw materials were more moderate, the average annual growth rate reached 3.5%. After declining in 1992, EU purchases from non-member countries started rising slightly in 1993 and registered a sharp increase in 1994 (10.3%). In 1996, extra-EU

imports grew by 6.5%, which means 3 percentage points over the average annual growth rate for the period 1985-1996.

Germany was the main outlet for exports from non-member countries to the Union, with around a quarter of the total in 1996, followed by the United Kingdom (17.9%), France (12.7%) and Italy (11%). The total share of these four countries together was stable during the period 1985-1996, representing approximately two-thirds of total extra-EU imports, mainly because the reduction in Italy's share was offset by Germany's increase.

With regard to the extra-EU balance, as mentioned above, the general trend over the period 1960-1996 was for deficits to be made. These deficits were greater during the early 80s and 90s. In the last period, 1985-1996, and although in 1986 and 1987 the extra-EU trade balance showed a surplus, there was a remarkable deficit from 1988 to 1992. However, since 1993 the extra-EU trade deficit has been made up, and a surplus of ECU 43.4 billion was reached in 1996 (an increase of ECU 16 billion over the previous year).

At present, it should be pointed out that while the extra-EU trade flows are in surplus, the balances of some individual Member States are widely divergent.

Germany, in line with tradition, recorded the greatest surplus among the Member States. During the more recent period, and after absorbing the shock of reunification in the early 90s, it showed again the greatest extra-EU

surpluses, reaching a maximum of ECU 32.6 billion in 1996 (ECU 5.9 billion increase over the previous year), Italy ranked in second place (ECU 24.7 billion) and France was third (ECU 16.4 billion). These latter two countries, however, showed quite different trends. While France's extra-EU balance as from 1985 was always in surplus except in 1990-1991, the Italian structural deficit with non-EU countries (already existing in 1960) was made up only after the 1992 monetary crisis and the consequent devaluation of the lira. This fact led Italy to overtake France and reach the second place with an impressive increase of ECU 10 billion in its surplus in 1996 compared to the previous year (only ECU 1 billion for France).

By contrast, the Netherlands and the United Kingdom registered, as almost always, the highest deficits from 1960 to 1996, totalling ECU 27.2 billion and ECU 17.2 billion in 1996 respectively. Nevertheless, the Dutch deficit should be seen in the light of its intra-EU surplus and the country's transit role in EU trade.

Source: Eurostat-Correx and IMF-DOTS

Between 1960 and 1996 the group of partners made up of the USA, Japan and EFTA represented the main market for the EU as a whole. However, a major change in the structure of extra-EU exports has occurred in the last few years. The total share of the USA, Japan and EFTA in exports fell from the 42.8% registered in 1990 to 35.6% in 1996. Since 1985, the USA and EFTA markets have become less important in relative terms, while the share of exports to Japan increased from 3.1% in 1985 to 5.7% in 1996. Nevertheless, it must be pointed out that the USA is still the main individual partner for extra-EU exports with an 18.3% share in 1996.

By contrast, the export share of the Asian markets (the Dynamic Asian Economies (DAE), China, and other Asian countries) grew from 21.3% in 1985 to 24.7% in 1996. The share of exports to the DAE and China increased over the more recent years, and this was only partially offset by a reduction in the share of exports to other Asian countries. However, other points need to be mentioned about the Asian markets. First, the remarkable performance of EU exports to the DAE countries over the last eleven years must be highlighted, growing from 4.8% in 1985 to 11.2% in 1996. Secondly, EU exports to other Asian countries reached the highest percentage shares between 1975 and 1985 when sharp increases in oil prices took place (it should be remembered that other Asian countries' partners include states

such as Saudi-Arabia, Kuwait and the United Arab Emirates, which are oil producers and saw an impressive growth in their incomes between 1975 and 1985). Finally, in relative terms, the low share of extra-EU exports to China in comparison to other partners should be noted.

The Central and Eastern European countries (CEEC) and the Commonwealth of Independent States (CIS) together received 15.3% of extra-EU exports in 1996 - an over 5 percentage point increase over 1985, but approximately the same share as in 1975. However, these two partners have had different trends in EU-exports over the last few years. On the one hand, the CIS share went down from 4.7% in 1985 to 4% in 1996, mainly because of the dramatic recession that followed the collapse of the former USSR in the early 90s. On the other hand, CEEC figures increased sharply from 5.1% in 1985 to 11.3% in 1996, showing a reorientation of the trade of these former Comecon countries towards the EU. Furthermore, from the figures, it can be seen that the trade links of the EU with CEEC partners were always stronger than with the CIS over the thirty-six year period under consideration.

African markets dramatically reduced their share by more than ten percentage points between 1960 and 1996, partly due to the fall in the primary goods prices and the loosening of the colonial economic ties in this period.

As for Latin America, its extra-EU exports share went down from 10% in 1960 to 5.7% in 1996. However, the biggest fall took place during the 80s when the international debt crisis hit Latin American economies hard. In the early 90s, with

their economic recovery, the EU exports share to these countries stabilised at around 6%. With regard to Oceania, its extra-EU exports share fell during the 60s and 70s, and since 1991 it has remained at around 2.3%.

Source: Eurostat-Correx and IMF-DOTS

The group of industrialised countries constituted by the USA, Japan and EFTA are by far the most important suppliers of the European Union. Their extra-EU imports share went up from 31.1% in 1960 to 41.3% in 1996, although since 1990 (45.8%) this share has been decreasing. This decline is due to the fall in Japan's share, from 12.1% in 1991 to 9% in 1996, while the USA and the EFTA share have remained much more stable (at around 19% and 13% respectively during the same period). The fact that the share of these countries still represents more than 40% of total extra-EU imports along with the increased share of EU-imports coming from some newly industrialised countries (especially the DAE countries) can be partially explained by the growing importance of intra-industry trade over the last twenty years. Furthermore, the downward trend in raw materials prices over the 80s was the main cause of the notable reduction in the share of EU imports from some partner areas, such as OPEC, Africa and Latin America. For instance, OPEC accounted for only 7.8% in 1996, compared with 18.7% in 1985 and 29.4% in 1975.

The CEEC and CIS partners, which accounted for

7.6% in 1960 and 9.9% in 1990, accounted together for 13.2% of total extra-EU imports in 1996. However, this growth between 1990 and 1996 took place mainly because the increase in the CEEC share offset the decline in the CIS's percentage. This trend reflects the economic changes which occurred in these countries during these years. As already mentioned, after the crisis that followed the dissolution of Comecon, the Central and Eastern European countries quickly redirected their trade towards the EU markets: in 1996, their share of total extra-EU imports went up to 8.6% compared with 5.4% in 1990. By contrast, as with exports, the imports share of the CIS fell from 4.5% in 1990 to 4.1% in 1992 following the political dissolution of the Soviet Union. In 1996 the CIS share registered the same level as in 1990.

As for the DAE, China and other Asian countries taken together, their share reached a peak in 1975 and 1980 (29.2% and 28.6% respectively) during the oil price rises, mainly because, as already mentioned, some partners of other Asian countries belong to OPEC. After a fall in the mid-80s, its share grew to 24.2% in 1996.

The DAE countries and China have become very important suppliers to the European Union in more recent times. Their shares of total EU imports went up from 5.2% and 1% in 1985 to 9.9% and 5.2% in 1996 respectively. The impressive increase of the DAE countries shows, once more, the growing importance of intra-

industry trade. As regards other Asian countries, their extra-EU imports share dropped from 11.2% in 1985 to 9.1% in 1996.

Africa, Latin America and Oceania all saw a decrease in their shares during the period 1960-1996.

The EU's trade balance with the group of countries made up by the USA, Japan and EFTA in general showed a deficit over the period 1960-1996. However, it was almost in balance in 1986, and turned into a huge deficit during the late 80s, totalling ECU 17.2 billion in 1996. Nevertheless, in the last four years, considerable improvements have been recorded, mainly due to the remarkable reductions in the bilateral deficits with Japan and the USA.

Trade with Japan still registered the biggest deficit in 1996, with a value of ECU 16.8 billion. However, in relative terms (as a percentage of trade with

each country), it was bilateral trade with China which recorded the biggest deficit in 1996 (34.3%), whereas Japan ranked in second place for the same year (19.1%).

The European Union has registered remarkable improvements in its trading positions with the CEEC and CIS. Taken together, their deficit, accounting for ECU 9.1 billion in 1985, shifted to a surplus of ECU 19.1 billion in 1996. However, it must be pointed out that this improvement was mainly due to the increased surplus with CEEC partners, which in relative terms represented 17.2% in 1996 (ECU 20.5 billion).

* imports + exports

The EU balance has also shown improvements with the DAE and other Asian countries in the last few years, reaching surpluses of ECU 12.5 billion and ECU 16.2 billion in 1996 (9.8% and 13.3% in relative terms respectively).

Since 1993 Africa and Latin America have both registered surpluses, representing 1.1% and 8% in relative terms in 1996. Finally, the EU surplus with Oceania went up from 1992 to ECU 6.6 billion in 1996. This was the biggest surplus in relative terms (29.7%).

The European Union is a traditional exporter of manufactured products and this specialisation has increased over the last two decades: in 1980, the share of manufactured products in total extra-EU exports was 71%, while in 1996 this figure reached 87.5%.

Among manufactured products, the biggest share of extra-EU exports was accounted for by machinery and transport equipment (45.2% of total extra-EU exports in 1996), showing constant growth since 1985. During the period under

consideration, the share of chemical products grew slightly (from 9.3% in 1980 to 12.9% in 1996), while the group "Other manufactures" remained stable at around 29%.

The corresponding reduction in the share of raw materials was mainly due to the declining importance of extra-EU exports of fuel products (from 4.9% in 1980 to 2.5% in 1996). Meanwhile, exports of agri-food products and crude material were fairly stable at around 7% and 2% respectively.

The trend in extra-EU imports clearly shows the growing role of manufactured products. Raw materials, still representing a share of 53.1% of total extra-EU imports in 1980, accounted for only 28% in 1996. During the last two decades, various factors (such as the decline in primary goods

prices in the mid-80s and the growing importance of intra-industry trade) substantially modified the EU import structure and consequently the share of manufactured imports increased from 32.1% in 1980 to 69.3% in 1996.

* imports + exports

In the early 80s, fuel products were the most relevant category (34.3% share of total extra-EU imports). However, as from 1985 when raw materials prices fell, the share of machinery and transport equipment started increasing and it became the most important group of products imported, reaching 32.3% in 1996 compared with 13.7% for fuel products the same year. Other manufactured products achieved a remarkable increase, from 16.7% in 1980 to 29.3% in 1996. As mentioned above, these figures show the increasing importance of intra-industry trade in the EU's commercial relations.

The European Union economy, based on the manufacturing industry, has a structural deficit in the primary sector. Nevertheless, this deficit improved in relative terms, from 65.6% to 39.9% of total extra-EU trade in raw materials, between 1980 and 1996.

As far as manufactured products are concerned, the relative surplus fell from 24.9% in 1980 to 15.1% in 1996. Once more, this is additional evidence of the growing importance of intra-industry flows in EU external trade relations.

2.1 Intra-EU trade

The *Intrastat* system was introduced on 1 January 1993 due to the abolition of customs formalities within the EU. Since that date, data have been collected directly from firms. As the *Intrastat* system for collecting data is different from the system used in previous years, the change in the figures from 1992 to 1993, 1994 and 1995 should be interpreted with caution.

2.1 Share of intra-EU trade in total EU trade flows

Intra-EU trade has always represented more than 50% of the EU's total trade, and at present it is almost two-thirds. Since 1970, there have been three periods when intra-EU trade declined as a percentage of total EU trade. During the periods 1973-1975 and 1979-1981, the relative importance of intra-EU trade fell sharply due to increases in primary goods prices. As a result, the total value of extra-EU imports went up, raising total extra-EU trade figures in comparison with intra-EU trade. In 1993, in spite of implementation of the internal market another decline in the

relative importance of intra-EU trade occurred. It must be pointed out that since 1993, when the internal market was introduced, the collection of intra-EU data has been reorganised. A substantial drop in intra-EU figures, implying a certain degree of under-estimation of flows, corresponded with the introduction of *Intrastat*. In particular, arrivals are under-estimated, and dispatches are considered the most reliable figure of intra-EU trade. However, it is difficult to assess whether the shift in 1993 is a purely statistical phenomenon.

Furthermore, it must be stressed that the volume of intra-EU trade did in fact increase significantly with the enlargement of the EU in 1995, since the trade of Austria, Sweden and Finland is strongly geared to the EU market. Thus, the intra-EU share of total EU trade before the three new Member States joined the EU was 58% in 1994. One year later, in 1995, when the enlargement took place, the share of intra-EU trade reached around 64%. It must be pointed out that the EU

time series presented in this statistical yearbook does not show this shift, because it is calculated as if all 15 Member States had belonged to the EU since the beginning in order to keep the time series stable. Nevertheless, the time series reflects the increasing importance of intra-EU trade within total EU trade. This has become possible because the links among Member States' economies have become stronger over the last few decades.

* arrivals + imports

The share of intra-EU trade varies widely from one Member State to another. As a general rule, for relatively small countries such as Portugal, Belgium-Luxembourg, the Netherlands and

Austria, the shares are higher, while Germany and the United Kingdom have lower ratios. Some countries like France are in an intermediate position.

As mentioned above, dispatches are considered the most reliable figure for analysing intra-EU trade. Manufactured goods registered the highest share of total intra-EU trade: 78.6% in 1996. As in the case of extra-EU trade, the most dynamic product category in the last ten years has been machinery and transport equipment, which grew from 31.8% in 1986 to 37.2% in 1996, while

chemicals products increased only two percentage points during the same period.

With regard to raw materials, their intra-EU share decreased from 21.7% in 1986 to 16.8% in 1996. Inside this group, all product categories went down between one and two and a half percentage points during the period under consideration.

* intra + extra

In 1996, intra-EU trade as a percentage of total EU trade in raw materials and manufactured products was fairly similar (around 60% and 64%), although from 1986 until 1992 the ratio for manufactured products was always significantly higher. This reflects the fact that extra-EU trade in manufactured goods is becoming more important.

Major differences can be found between product categories. In the case of raw materials the intra-

EU ratios for food products were conspicuously higher (71% in 1996) than those for fuel products and crude material (around 44% and 57% respectively), which are more oriented to extra-EU trade.

As for manufactured products, the intra-EU ratios for chemicals were significantly higher (68%) than those for machinery and transport equipment (62%).

2.2 Intra-EU trade balance

Before 1993 and the introduction of the Intrastat System (see note above), the sums of the intra-EU surpluses and deficits recorded by the Member States did not tally as they should almost have done theoretically. From 1993 new statistical problems occurred, mainly because of non-response from firms and the threshold system introduced.

As far as the threshold system is concerned, the import (arrival) flow is in principle less concentrated than the export (dispatch) flow and this could partially explain the under-estimation of arrivals: with Intrastat, the smaller companies are no longer obliged to make a statistical declaration. In fact, only a few Member States produce "corrected" figures which take account of the threshold effect.

Source: Eurostat-Correx

The statistical discrepancies in intra-EU trade flows make it difficult to assess the development of intra-EU trade balances by Member States. This applies particularly to the transition from 1992 and 1993. However, the following can be concluded:

Since 1985 the most significant intra-EU surplus has almost always been recorded by the Netherlands. In 1996 it reached ECU 37.3 billion, followed by Germany (ECU 19 billion), Belgium-Luxembourg (ECU 12.4 billion) and Italy (ECU 10 billion). Nevertheless, the Netherlands is a special case, as an important part of its trade is "in transit" (i.e. coming from outside the EU and going to another Member State). This is consistent with its large extra-EU deficit. As for Germany, the fall in its intra-EU surplus which occurred in 1991 after

reunification had taken place is evident. In addition, Italy has shown a remarkable performance since 1993 after the devaluation of the lira, shifting from deficit to surplus.

Greece, Austria, United Kingdom and Spain recorded the largest intra-EU deficits among the EU countries since the early 90s, totalling ECU 8.7 billion, ECU 11.4 billion, ECU 8.2 billion and ECU 6.9 billion respectively in 1996.

Finally, it should be pointed out that for some countries in different periods, their global deficits (their extra-EU deficits must be added) have had a dramatic increase in comparison with the size of their economies (e.g. Italy in the early 80s and Spain in the early 90s).

(1) In particular in 1992, the declaration of external trade with the countries of the former USSR may have resulted in the overestimation of trade with Russia and the under-estimation of trade with the other former USSR republics.

(2) In 1992, Yugoslavia included only Serbia, Montenegro and the former Yugoslav Republic of Macedonia.

(3) South Africa includes Namibia up to 31.12.1993.

(4) Including Estonia, Latvia and Lithuania since 1.1.1992.

(5) Including Entree since 1.1.1994 and Namibia since 1.1.1990.

(1) In particular in 1992, the declaration of external trade with the countries of the former USSR may have resulted in the overestimation of trade with Russia and the under-estimation of trade with the other former USSR republics.

(2) In 1992, Yugoslavia included only Serbia, Montenegro and the former Yugoslav Republic of Macedonia.

(3) South Africa includes Namibia up to 31.12.1989.

(4) Including Estonia, Latvia and Lithuania since 1.1.1992.

(5) Including Eritrea since 1.1.1994 and Namibia since 1.1.1990.

(1) In particular in 1992, the declaration of external trade with the countries of the former USSR may have resulted in the overestimation of trade with Russia and the under-estimation of trade with the other former USSR republics.

(2) In 1992, Yugoslavia included only Serbia, Montenegro and the former Yugoslav Republic of Macedonia.

(3) South Africa includes Namibia up to 31 12 1989.

(4) Including Estonia, Latvia and Lithuania since 1 1 1992.

(5) Including Eritrea since 1 1 1994 and Namibia since 1 1 1990.

(1) "Cover rate" is the export value index divided by the import value index.

(2) "Volumes ratio" is the export volume index divided by the import volume index.

(3) "Terms of trade" is the unit value export index divided by the unit value import index.

The indices, which are annually linked, relate to reporter EUR9 until 1981, EUR10 until 1984, EUR12 until 1995 and EUR15 thereafter. They only cover SITC 0-8 products until 1986, and all the products thereafter.

(1) The ECU is a 'basket' monetary unit based on the market exchange rates of certain quantity of each European Union currency weighted on the basis of the average gross national product over five years and of the intra-EU trade of each Member State. The rates used here are averages of the daily rates.

LIST OF PRODUCTS : SITC, REV. 3

0 Food and live animals

- 00 Live animals other than animals of division 03
- 01 Meat and meat preparations
- 02 Dairy products and birds' eggs
- 03 Fish (not marine mammals), crustaceans, molluscs and aquatic invertebrates and preparations thereof
- 04 Cereals and cereal preparations
- 05 Vegetables and fruit
- 06 Sugars, sugar preparations and honey
- 07 Coffee, tea, cocoa, spices, and manufactures thereof
- 08 Feeding stuff for animals (not including unmilled cereals)
- 09 Miscellaneous edible products and preparations

1 Beverages and tobacco

- 11 Beverages
- 12 Tobacco and tobacco manufactures

2 Crude materials, inedible, except fuels

- 21 Hides, skins and fur skins, raw
- 22 Oil seeds and oleaginous fruits
- 23 Crude rubber (including synthetic and reclaimed)
- 24 Cork and wood
- 25 Pulp and waste paper
- 26 Textile fibres (other than wool tops and other combed wool), and their wastes (not manufactured into yarn or fabric)
- 27 Crude fertilizers, other than those of division 56, and crude minerals (excluding coal, petroleum and precious stones)
- 28 Metalliferous ores and metal scrap
- 29 Crude animal and vegetable materials, n.e.s.

3 Mineral fuels, lubricants and related materials

- 32 Coal, coke and briquettes
- 33 Petroleum, petroleum products and related materials
- 34 Gas, natural and manufactured
- 35 Electric current

4 Animal and vegetable oils, fats and waxes

- 41 Animal oils and fats
- 42 Fixed vegetable fats and oils, crude, refined or fractionated
- 43 Animal or vegetable fats and oils, processed; waxes of animal or vegetable origin; inedible mixtures or preparations of animal or vegetable fats and oils, n.e.s.

5 Chemicals and related products, n.e.s

- 51 Organic chemicals
- 52 Inorganic chemicals
- 53 Dyeing, tanning and colouring materials
- 54 Medical and pharmaceutical products
- 55 Essential oils and resinoids and perfume materials; toilet, polishing and cleaning preparations
- 56 Fertilizers (other than those of group 272)
- 57 Plastics in primary forms
- 58 Plastics in non-primary forms
- 59 Chemical materials and products, n.e.s.

6 Manufactured goods classified chiefly by material

- 60 Complete industrial plant appropriate to section 6
- 61 Leather, leather manufacture, n.e.s., and dressed fur skins
- 62 Rubber manufacture, n.e.s.
- 63 Cork and wood manufacture (excluding furniture)
- 64 Paper, paperboard and articles of paper pulp, of paper or of paperboard
- 65 Textile yarn, fabrics, made-up articles, n.e.s., and related products
- 66 Non-metallic mineral manufactures, n.e.s.
- 67 Iron and steel
- 68 Non-ferrous metals
- 69 Manufacture of metals, n.e.s.

7 Machinery and transport equipment

- 70 Complete industrial plant appropriate to section 7
- 71 Power-generating machinery and equipment
- 72 Machinery specialized for particular industries
- 73 Metal working machinery
- 74 General industrial machinery and equipment, n.e.s., and machine parts, n.e.s.
- 75 Office machines and automatic data-processing machines
- 76 Telecommunications and sound recording and reproducing apparatus and equipment
- 77 Electrical machinery, apparatus and appliances, n.e.s. and electrical parts thereof (including non-electrical counterparts n.e.s. of electrical household type equipment)
- 78 Road vehicles (including air-cushion vehicles)
- 79 Other transport equipment

8 Miscellaneous manufactured articles

- 80 Complete industrial plant appropriate to section 8
- 81 Prefabricated buildings; sanitary plumbing, heating and lighting fixtures and fittings, n.e.s.
- 82 Furniture and parts thereof; bedding, mattresses, mattress supports, cushions and similar stuffed furnishings
- 83 Travel goods, handbags and similar containers
- 84 Articles of apparel and clothing accessories
- 85 Footwear
- 87 Professional, scientific and controlling instruments and apparatus, n.e.s.
- 88 Photographic apparatus, equipment and supplies and optical goods, n.e.s.; watches and clocks
- 89 Miscellaneous manufactured articles, n.e.s.

9 Commodities and transactions not classified elsewhere in SITC

- 91 Postal packages not classified according to kind
- 93 Special transactions and commodities not classified according to kind
- 94 Complete industrial plant, not elsewhere specified
- 96 Coin (other than gold coin) not being legal tender
- 97 Gold, non-monetary (excluding gold, ores and concentrates)

European Commission

**External and intra-European Union trade
Statistical yearbook 1958-1996**

Luxembourg: Office for Official Publications of the European Communities

1997 — 183 pp. — 21 x 29.7 cm

Theme 6: Foreign trade (red)
Series A: Yearbooks and yearly statistics

ISBN 92-828-1424-6

Price (excluding VAT) in Luxembourg: ECU 30

The environment in which trade statistics are collected has changed radically in recent years, leading to a detailed revision of the regulations. For statistics on trade with third countries, the introduction in 1988 of the Combined Nomenclature of goods (CN) and the Single Administrative Document led to considerable methodological changes. However, the major change came with the introduction of the Single Market on 1 January 1993. With the abolition of customs formalities between the Member States, the traditional source of trade statistics, came the introduction of a special collection system called INTRASTAT.

The yearbook on external and intra-European Union trade sets out to provide data on long-term trends in the trade of the European Union (EU) and its Member States. It contains data on the trade flows, broken down by major product groups, of the EU with its main trading partners on the one hand and between the Member States on the other. Using a modernized production tool, this new version of the yearbook aims to provide the reader with more information, in a more readable format.

This publication comprises seven parts:

- Analysis of recent trends in European Union trade
- European Union and world trade
- European Union trading partners
- Goods traded extra-EU
- Goods traded intra-EU
- Member States and EU trade
- External trade by Member State
