NOTE

Symbols of United Nations documents are composed of capital letters combined with figures.

The designations used in this publication have been provided by the competent authorities. Those designations and the presentation of material in this publication do not imply the expression of any opinion whatsoever on the part of the Secretariat of the United Nations concerning the legal status of any country, territory, city or area or of its authorities, or concerning the delimitation of its frontiers or boundaries.

Where the designation "country or area" appears in the headings of tables, it covers countries, territories, cities or areas.

(c) National definitions of urban-rural 4

B. Notes on the Statistical Tables 26

C. Notes on the Figures 57

List of Tables

1. Population by sex, rate of population increase, surface area and density 60

2. Population by age and sex: country or area, urban-rural areas, cities 68

3. Economically active population by sex and industry: country or area, urban-rural areas, cities 140

4. Economically active population by sex and occupation: country or area, urban-rural areas, cities 162

5. Resident population by sex and duration of residence: country or area, urban-rural areas, cities 180

6. Population, number of households, number of living quarters, average size of household, average number of households in living quarters and average number of persons in living quarters: country or area, urban-rural areas, cities 194

7. Population by sex, number of households and number of living quarters by type of living quarters: country or area, urban-rural areas, cities 208

8. Homeless population by sex, number of homeless households and number of squatter households: country or area, urban-rural areas, cities 264

(List of tables - continued) Page

9. Population age 5-24 years attending school by sex and age: country or area, urban-rural areas, cities 268

10. Illiterate and total population aged 15 years and over by sex: country or area, urban-rural areas, cities 294

11. Population estimates, projections and growth rates for 1995 and 2000: 100 world's largest agglomerations, ranked by population size in 1995 300

12. Land use in thousands hectares, 1987 and 1992: world, region, country or area 302

13. Urban land use: urban areas, cities in square kilometres 312

14. Number of dwellings constructed annually, number and rate per thousand population: country or area, urban-rural areas, cities 316

15. Number of dwellings constructed by type of building in which dwellings are located and total number of constructed rooms: country or area, urban-rural areas, cities 324

16. Occupied housing units by number of rooms per housing unit, number and percentage, total number of rooms, average size of housing unit and average number of persons per room: country or area, urban-rural areas, cities 350

17. Number of households in occupied housing units by tenure: country or area, urban-rural areas, cities 370

18. Occupied housing units by water supply system and toilet installation: country or area, urban-rural areas, cities 380

19. Occupied housing units by type of lighting and cooking facilities: country or area, urban-rural areas, cities 398

20. Occupied housing units by fuel used for cooking: country or area, urban-rural areas, cities 416

21. Reported criminal offences by type of criminal offences and rate per 1000 population: country or area, urban-rural areas, cities 434

22. Sentenced perpetrators of criminal offences by type of criminal offence: country or area, urban-rural areas, cities 444

23. Number of road vehicles by type: cities 454

24. Number of hospital establishments, number of physicians and rate per 1000 population, crude birth rate, crude death rate and infant mortality rate: cities 460

25. Telephone lines, TV's and circulation of daily newspapers, number and rate per 1000 population, number of cinemas, number of public parks and area (in square kilometers): cities 466

26. Consumption of water (in thousand cubic meters) and litres per capita per day, consumption of electricity (in thousand KWh), total, in households, Kilowatt-hours per day per capita and percentage of household consumption in total consumption, number of schools by type: cities 472

27. Percentage of population residing in urban areas 1980-2025: country or area 478

28. Urban population, number of urban agglomerations and percentage of urban population by the size of urban agglomeration by major area and region, 1980-2015 484

29. Population (in thousands) of urban agglomeration comprising 750,000 or more inhabitants in 1990 for country or area, 1980-2015 498

30. Percentage of total population residing in urban agglomerations with 750,000 or more inhabitants in 1990 for country or area, 1980-2015 510

LIST OF FIGURES

1. Annual rate of population increase 1985-1992 (in percent) 59

2. Population by age and sex 67

3. Economically active population by sex 139

4. Economically active population by occupation 161

5. Population resident since birth as percent of total resident population 179

6. Average number of persons per living quarters 193

7. Share of occupied and vacant dwellings in total number of conventional dwellings 207

8. Share of squatter households in total number of households 263

9. Population aged 5-24 attending school as a percent of total population of the same age by sex 267

10. Illiterate population aged 15 years and over as percent of population of same age by sex 293

11. One hundred world's largest agglomeration by country or area 299

(List of figures - continued) Page

12. Land use, 1992 301

13. Built-up areas in cities by land use 311

14. Number of dwellings constructed annually - rate per thousand population 315

15. Index of total number of constructed dwellings 323

16. Average number of persons per room in occupied housing units 349

17. Percentage of households by tenure 369

18. Percentage of occupied housing units without piped water and without toilet of any type 379

19. Percentage of occupied housing units with non-electrical lighting and without kitchen or other space for cooking 397

20. Percentage of housing units using electricity or gas as a cooking fuel 415

21. Rate of reported criminal offences against life and limb and against property per 1000 population 433

22. Percentage of sentenced perpetrators of criminal offences by type of criminal offence 443

23. Percentage of road vehicles by type 453

24. Physicians per 1000 population 459

25. TV sets/receivers per 1000 population 465

26. Consumption of water - liters per capita per day 471

27. Percentage of population residing in urban areas by region, 1980-2025 477

28. Percentage of urban population residing in urban agglomerations by the size of agglomeration and region, 1980-2015 483

29. Urban agglomerations with population 750,000 and over in 1990 by country or area 497

30. Percentage of total population residing in urban agglomerations with 750,000 or more inhabitants in 1995, by country or area 509

Inquiries and comments concerning the scope, content and organization of the *Compendium of Human Settlements Statistics* are welcome. They should be addressed to the Director, Statistical Division, United Nations, New York, 10017 or to the Research and Development Division, United Nations Centre for Human Settlements (Habitat), P.O. Box 30030, Nairobi, Kenya.

INTRODUCTION

This issue of the *Compendium of Human Settlements Statistics* has been prepared as a joint publication by the United Nations Statistical Division (UNSD), Department for Economic and Social Information and Policy Analysis (DESIPA) and the United Nations Centre for Human Settlements (Habitat), pursuant to the action taken at the twenty-eight session of the Statistical Commission. The first issue of the *Compendium of Human Settlements Statistics*[1] replaced the former *Compendium of Housing Statistics*, of which three issues were published from 1974 to 1980.

The purpose of the *Compendium of Human Settlements Statistics* is to assist Governments in reviewing human settlements conditions, in formulating national policies and programmes to address urbanization and other major issues, and in promoting the systematic and sustainable development of human settlements. It is also intended to serve as a statistical foundation for the Global Report on Human Settlements and its Statistical Annex, which the General Assembly, in its resolution 34/114 of 14 December 1979, requested the United Nations Centre for Human Settlements (Habitat) to prepare on a regular basis. The Global Report on Human Settlements should contain a description of the main challenges and concerns of urbanization, identify human settlements development constraints at local, national and international levels, and build, on the basis of all available knowledge, a vision of sustainable human settlements and adequate shelter for all.

Recognizing the vital importance of sustainable development of human settlements, the General Assembly, in its resolution 47/180 of 22 December 1992 convened the second United Nations Conference on Human Settlements (Habitat II), to be held 3-14 June 1996 in Istanbul, Turkey. The objectives, as stated in the Resolution, *inter alia* are:

- "in long term, to arrest the deterioration of global human settlements conditions and ultimately create conditions for achieving improvements in the living environment of all people on a sustainable basis, with special attention to the needs and contributions of women and vulnerable social groups whose quality of life and participation in development have been hampered by exclusion and inequality, which affect the poor in general;
- to adopt a general statement of principles and commitments and formulate a related global plan of action suitable for guiding national and international efforts through the first two decades of the next century..."

In the context, this issue of the *Compendium of Human Settlements Statistics* aims to cover a variety of human settlements topics and thus to contribute to Habitat II.

The selection and organization of the contents of the *Compendium* were undertaken by the Statistical Division in close consultation with the City Data Programme Team of UNCHS (Habitat), which is supported by the Government of Italy, and the statistical services of the regional commissions and specialized agencies. The United Nations Centre for Human Settlements (Habitat) also sponsored an Expert Group Meeting on Human Settlements Statistics in 1987 in Nairobi, Kenya, and the recommendations of this Meeting were taken into account while preparing this issue of the *Compendium*. The statistics have been organized in five general areas: (a) population; (b) land use; (c) housing; (d) infrastructure and services; and (e) crime.

In addition, as a special feature, this publication presents estimates and projections of urban population and for large urban agglomeration prepared by the Population Division of the Department for Economic and Social Information and Policy Analysis.[2]

TECHNICAL NOTES

A. GENERAL REMARKS

1. *Sources and time periods of the statistics*

Human settlements statistics for 243 countries or areas and 338 cities are presented in this issue of the *Compendium* through the cooperation of national statistical services. The sources of data presented in this publication are as follows:

- Human Settlements Statistics Questionnaire 1992 was developed and finalized by the United Nations Statistical Division in close cooperation with United Nations Centre for Human Settlements (Habitat) and was dispatched to over 220 national statistical offices in 1992. The questionnaire consisted of 18 tables requesting human settlements statistics at national, urban-rural and city level. On the basis of data collected by this Questionnaire a computerized Statistical Database on Housing and Human Settlements (DATAHOUSE) was developed by United Nations Statistical Division and used as a basis for tabulations presented in this Compendium.

- United Nations Demographic Yearbook and Demographic and Social Statistics Database (DSSD) were also extensively used to supplement population data not covered by the Human Settlements Statistics Questionnaire 1992. The UN Demographic Yearbook is a comprehensive collection of international demographic statistics, prepared by the United Nations Statistical Division through the cooperation of national statistical services. In addition, the computerized Demographic and Social Statistics Database (DSSD), developed by the United Nations Statistical Division, was also used to complement data for the present publication.

- FAO Production Yearbook 1993 was used as a source for Table 12 of the Compendium displaying data on land use. This FAO publication is a compilation of statistical data on basic agricultural products and related information. Statistical information in the Yearbook is based primarily on data provided to the Statistical Division of Food and Agricultural Organization by national agencies through questionnaires or in official statistical publications.

- World Urbanization Prospects - The 1994 Revision prepared by the United Nations Population Division, Department for Social and Economic Information and Policy Analysis presents estimates and projections of urban and rural populations and of urban agglomerations. The publication also contains revised estimates and projections for all urban agglomerations that had at least 750,000 inhabitants in 1994. This publication was used as source for tables 11, 27, 28, 29 and 30 of the present Compendium.

The reference year is, as a rule, presented to indicate the period covered by data displayed. When the source of data was different than census or survey, i.e. administrative records, several consecutive years are shown in order to permit comparison over time. In general, the reference year of data has been entered after the name of the country. In case where the reference years for data at country level and for data at city level differ, then the appropriate year has been entered after the name of the city.

2. *Geographical classification and nomenclature*

In most cases the statistics give national or area total with an urban-rural breakdown. In addition, for each country or area, data for the capital city and three (or less) largest cities are also shown if provided. The nomenclature and arrangement of countries or areas and cities are explained in subsection (a) below. The selection and definition of cities or urban agglomeration are explained in

subsection (b) below. The national definitions of urban-rural are given in subsection (c) below.

(a) *Nomenclature and arrangement of countries or areas and cities*

Because of space limitations, the country or area names listed in the tables are generally the commonly employed short titles in use in the United Nations as at 31 December 1994, the full titles being used only when a short form is not available.

In so far as possible, all data, including time series data, relate to the territory within 1992 boundaries. Exceptions to these are footnoted in individual tables.

Data relating to the People's Republic of China generally include those for Taiwan Province in the field of statistics relating to population, surface area, natural resources, etc. In other fields of statistics, they do not include Taiwan Province unless otherwise stated.

Data relating to Ethiopia in this publication, unless otherwise indicated, include data for Eritrea.

Through accession of the German Democratic Republic to the Federal Republic of Germany with effect from 3 October 1990, the two German States have united to form one sovereign State. As from the date of unification, the Federal Republic of Germany acts in the United Nations under the designation of "Germany". All data shown which pertain to Germany prior to 3 October 1990 are indicated separately for the Federal Republic of Germany and the former German Democratic Republic based on their respective boundaries at the time indicated.

Data displayed under Yugoslavia, former Socialist Federal Republic of, refer to the period prior to April 1992, and include data for six republics (Bosnia-Herzegovina, Croatia, Macedonia, Montenegro, Serbia and Slovenia). Data displayed under Yugoslavia refer to the Federal Republic of Yugoslavia.

Data presented for the Holly See refer to Vatican City.

Countries or areas are listed in English alphabetical order within the following continents: Africa, North America, South America, Asia, Europe and Oceania.

The designations employed and the presentation of the material in this publication were adopted solely for the purpose of providing a convenient geographical basis for the accompanying statistical series. The same qualification applies to all notes and explanations concerning the geographical units for which data are presented.

Name of cities are presented in the original language of the country or area in which the cities are located. In cases where the original names are not in Roman alphabet, they have been Romanized. Cities are listed in alphabetical order. The names of capital cities are printed in capital letters. The designation of any specific city as a capital city is done solely on the basis of the designation as reported by country or area.

Owing to the rounding of figures, the totals and sub-totals shown in the tables do not always correspond exactly to the sums of their component items.

Explanatory notes concerning selected figures are indicated by footnote indicators shown against the name of the relevant countries or areas and are indicated by the numbers. The corresponding texts will be found at the end of each table.

(b) *Selection and definition of cities*

Since the main purpose of this publication is to provide basic statistics of human settlements, data at the level of cities or urban agglomerations were requested from countries or areas for most tables of the *Compendium*. The criteria used to determine the number of cities to be covered were set taking into account data availability within national statistical services and size of countries or areas and cities. Consequently, in a majority of countries or areas, data for the capital city and the three other largest cities were requested. In some countries, fewer than four cities are shown when fewer than three cities have a population with 100,000 or more inhabitants. Therefore, for some countries and areas data for capital city and two other were collected, and in some cases only data for the capital city.

The city, for the purpose of data collection and presentation in this publication, is defined as an administrative city. An administrative city is defined according to legal/political boundaries established in each country for cities. If data for urban agglomeration were received, they are displayed and footnoted. An urban agglomeration comprises the city or town proper and also suburban fringe or thickly settled territory lying outside, but adjacent to, its boundaries. Where data refer to some other administrative unit (e.g. provinces, metropolitan area, etc.) they are so footnoted.

(c) *National definitions of urban-rural*

The traditional distinction between urban and rural areas within a country used to be based on the assumption that urban areas provide a different way of life and usually a higher level of living than is found in rural areas. International comparability of urban-rural distributions is seriously impaired by the wide variation among national definitions of the concept of 'urban', as can be seen from the definitions shown below.

An historical overview of national definitions is presented as available within the Statistical Division to show changes in defining urban areas in different countries and areas overtime. The definition used for preparation of this publication is generally for the latest year available.

Included are all national definitions, regardless of whether data presented in tables of the *Compendium* incorporate urban-rural breakdown for a specific country or area.

DEFINITION OF URBAN AREAS

AFRICA

Algeria

1954: Forty-six important communes having local self-government.
1960: Fifty-five of the most important communes having local self-government.
1966: All communes having a chef-lieu either a city, a rural town or an urban agglomeration.
1977: All communes having a chef-lieu either a city, a rural town or an urban agglomeration.
1987: All communes having a chef-lieu either a city, a rural town or an urban agglomeration.

Angola

1960: Agglomerations of 2,000 or more inhabitants.

Benin

1961: Towns of Cotonou, Porto-Novo, Ouidah, Parakou and Djougou.
1979: Towns of Cotonou, Porto-Novo, Ouidah, Parakou and Djougou.

Botswana
1964: Not available.
1971: The cities of Gaberone and Labotsi and the urban agglomeration of Francistown.
1981: Agglomeration of 5,000 or more inhabitants where 75 per cent of the economic activity is of the non-agricultural type.

Burkina Faso
1975: Not available.
1985: The sum of 14 towns.

Burundi
1979: Commune of Bujumbura.

Cameroon
1976: Urban centres.
1987: Urban centres.

Cape Verde
1970: Not available.
1980: Praia.

Central African Republic
1975: 20 principal centres with a population of over 3,000 inhabitants.

Chad
1964: Towns of 5,000 or more.

Comoros
1980: Administrative centres of prefectures and localities of 5,000 or more inhabitants.

Congo
1960: Not available.
1974: Not available.
1984: Sum of the Brazzaville and Pointe- Noire communes.

Côte d'Ivoire
1975: Urban agglomeration of 10,000 or more inhabitants and agglomerations of 4,000 to 10,000 inhabitants with 50 per cent of households engaged in non-agricultural activities.

Egypt
1960: Governorates of Cairo, Alexandria, Port Said, Ismailia, Suez, frontier governorates and capitals of other governorates as well as district capitals (Markaz).
1976: Governorates of Cairo, Alexandria, Port Said, Ismailia, Suez, frontier governorates and capitals of other governorates as well as district capitals (Markaz).
1986: Governorates of Cairo, Alexandria, Port Said, Ismailia, Suez; frontier governorates and capitals of other governorates as well as district capitals (Markaz).

Equatorial Guinea
1983: District centres and localities with 300 dwellings and/or 1,500 inhabitants or more.

Ethiopia
1984: Localities of 2,000 or more inhabitants.

Gabon
1960: Towns having a population of over 2,000 inhabitants.

Gambia
1963: Banjul only.
1973: Banjul only.
1983: Banjul only.

Ghana
1960: Localities of 5,000 or more inhabitants.
1970: Localities of 5,000 or more inhabitants.
1984: Localities of 5,000 or more inhabitants.

Guinea
1955: Urban centres.
1962: Urban centres.
Kenya
1969: Towns of 2,000 or more inhabitants.
1979: Towns of 2,000 or more inhabitants.
Liberia
1962: Not available.
1974: Localities of 2,000 or more inhabitants.
Libyan Arab Jamahiriya
1964: Total population of Tripoli and Benghazi plus the urban parts of Beida and Derna.
1973: Not available.
1984: Baladiyas (municipalities).
Madagascar
1966: Centres having more than 5,000 inhabitants.
1975: Centres having more than 5,000 inhabitants.
Malawi
1966: All townships and town planning areas and all district centres.
1977: All townships and town planning areas and all district centres.
Mali
1976: Localities of 5,000 or more inhabitants and district centres.
1987: Localities of 5,000 or more inhabitants and district centres.
Mauritania
1977: Urban centres.
1988: Urban centres.
Mauritius
1952: Localities with legally defined limits, administered by a locally nominated body or a municipal corporation.
1962: Proclaimed townships, according to enlarged limits as of August 1963, plus the town of Makebourg.
1972: Towns with proclaimed legal limits.
1983: Towns with proclaimed legal limits.
Morocco
1960: 117 urban centres.
1971: Not available.
1982: 184 urban centres.
Namibia
1960: Localities (towns, villages and townships) large enough to be treated as separate units, whether having local government or not.
Nigeria
1952: The 40 largest towns.
1963: The 40 largest towns.
1991: Not available.
Réunion
1954: Administrative centres of communes having more than 2,000 habitants.
1961: Agglomerations in communes of which the administrative centres have more than 2,000 inhabitants.
Rwanda
1970: Kigali, the capital, administrative centres of prefectures, important agglomerations and their surroundings.

1978: Kigali, the capital, administrative centres of prefectures, important agglomerations and their surroundings.

St. Helena

1976: Jamestown, the capital.

Senegal

1976: Agglomerations of more than 10 000 inhabitants.

Seychelles

1960: Port Victoria, the capital.

1971: Port Victoria, the capital.

1977: Port Victoria, the capital.

Somalia

1987: Not available.

South Africa

1951: All areas of 500 or more inhabitants and adjoining suburban areas, excluding predominantly rural agricultural settlements, temporary villages for construction work in rural areas and alluvial diamond diggings; well-established towns with specified urban characteristics with fewer than 500 inhabitants but having at least approximately 100 white inhabitants; 'rural' portions of certain districts in which large metropolitan areas fall and where the percentage of the rural population is small compared with the urban and a considerable proportion of the workers follow urban-type occupations.

1960: All areas of 500 or more inhabitants and adjoining suburban areas, excluding predominantly rural agricultural settlements, temporary villages for construction work in rural areas and alluvial diamond diggings; well-established towns with specified urban characteristics with fewer than 500 inhabitants but having at least approximately 100 white inhabitants; 'rural' portions of certain districts in which large metropolitan areas fall and where the percentage of the rural population is small compared with the urban and a considerable proportion of the workers follow urban-type occupations.

1970: All areas of 500 or more inhabitants and adjoining suburban areas, excluding predominantly rural agricultural settlements, temporary villages for construction work in rural areas and alluvial diamond diggings; well-established towns with specified urban characteristics with fewer than 500 inhabitants but having at least approximately 100 white inhabitants; 'rural' portions of certain districts in which large metropolitan areas fall and where the percentage of the rural population is small compared with the urban and a considerable proportion of the workers follow urban-type occupations.

1980: Places with some form of local authority.

1985: Places with some form of local authority.

Sudan:

1973: Localities of administrative and/or commercial importance or with population of 5,000 or more inhabitants.

1983: Localities of administrative and/or commercial importance or with population of 5,000 or more inhabitants.

Swaziland

1986: Localities proclaimed as urban.

Togo

1958: Seven urban communes.

1970: Localities having been given the status of communes.

Tunisia

1956: Localities having been given the status of communes.

1966: Population living in communes.

1984: Population living in communes.

Uganda

1959: The population of all settlements as small as trading centres with populations as low as 100 persons.

1969: Not available.

United Republic of Tanzania

1967: 16 gazetted townships.

1978: 16 gazetted townships.

Tanganyika

1967: 15 gazetted townships.

Zanzibar

1967: Administratively gazetted township of Zanzibar.

Zaire

1955: Agglomerations of 2,000 or more where the predominant economic activity is of the non-agricultural type and also mixed agglomerations which are considered urban because of their type of economic activity but are actually rural in size.

1984: Agglomerations of 2,000 or more where the predominant economic activity is of the non-agricultural type and also mixed agglomerations which are considered urban because of their type of economic activity but are actually rural in size.

Western Sahara

1970: Not available.

Zambia

1963: Main towns and as many small townships as could be separately identified.

1969: Localities of 5,000 or more inhabitants, the majority of whom all depend on non-agricultural activities.

1980: Localities of 5,000 or more inhabitants, the majority of whom all depend on non-agricultural activities.

Zimbabwe

1982: Towns and places of 2,500 or more inhabitants.

AMERICA, NORTH

Antigua

1960: City of St. John's.

1970: City of St. John's.

Bahamas

1963: Island of New Providence.

Barbados

1960: Bridgetown

1970: Bridgetown

1980: Bridgetown

Belize

1961: Legally established towns.

Canada

1951: Cities, towns and villages of 1,000 or more inhabitants, regardless of whether incorporated or unincorporated, including the suburban parts of the major agglomerations ('metropolitan areas'), incorporated cities, towns and villages of all sizes.

1956: Cities, towns and villages of 1,000 or more inhabitants, regardless of whether incorporated or unincorporated, including the suburban parts of the major agglomerations ('metropolitan areas'), incorporated cities, towns and villages of all sizes.

1961: Cities, towns and villages of 1,000 or more inhabitants, regardless of whether incorporated or unincorporated, including the suburban parts of the major agglomerations ('metropolitan areas'), incorporated cities, towns and villages of all sizes.

1966: Cities, towns and villages of 1,000 or more inhabitants, regardless of whether incorporated or unincorporated, including the suburban parts of the major agglomerations ('metropolitan areas'),

incorporated cities, towns and villages of all sizes.

1971: Incorporated cities, towns and villages of 1,000 or more inhabitants, and their urbanized fringes; unincorporated places of 1,000 or more inhabitants, having a population density of at least 1,000 per square mile or 390 per square kilometer, and their urbanized fringes.

1976: Incorporated cities, towns and villages of 1,000 or more inhabitants, and their urbanized fringes; unincorporated places of 1,000 or more inhabitants, having a population density of at least 1,000 per square mile or 390 per square kilometer, and their urbanized fringes.

1981: Places of 1,000 or more inhabitants, having a population density of 400 or more per square kilometer.

1986: Places of 1,000 or more inhabitants, having a population density of 400 or more per square kilometer.

Cayman Islands

1970: Not available.

Costa Rica

1950: Administrative centres of cantons.

1963: 'Metropolitan areas' of San José city (excluding rural sector of district of Las Pavas), Cartago city, and administrative centres of all cantons except San Pablo (province of Heredia), Nandayure (province of Guanacaste) and Buenos Aires (province of Puntarenas).

1981: Civil Parish of St. Peter Port.

Jersey

1951: Civil Parish of St. Helier.
1961: Civil Parish of St. Helier.

Czechoslovakia

1951: Communities of 2,000 or more inhabitants.

1961: Large towns, usually of 5,000 or more inhabitants, having a density of more than 100 persons per hectare of built-up area, three or more living quarters in at least 15 per cent of the houses, piped water and a sewerage system in the major part of the town, and not more than 10 per cent of the total population active in agriculture; small towns of usually 2,000 or more inhabitants, having a density of more than 75 persons per hectare of built-up area, and not more than 15 per cent of the population active in agriculture. Agglomerated communities which have the characteristics of small towns in regard to size; population density, housing, water supply, and sewerage, and the percentage of the population active in agriculture, but which lack such town characteristics as educational facilities, cultural institutions, health services and trade and distributive services, because these facilities and

services are supplied by a town in the vicinity.

1980: Large towns, usually of 5,000 or more inhabitants, having a density of more than 100 persons per hectare of built-up area, three or more living quarters in at least 15 per cent of the houses, piped water and a sewerage system in the major part of the town, and not more than 10 per cent of the total population active in agriculture; small towns of usually 2,000 or more inhabitants, having a density of more than 75 persons per hectare of built-up area, and not more than 15 per cent of the population active in agriculture. Agglomerated communities which have the characteristics of small towns in regard to size; population density, housing, water supply, and sewerage, and the percentage of the population active in agriculture, but which lack such town characteristics as educational facilities, cultural institutions, health services and trade and distributive services, because these facilities and services are supplied by a town in the vicinity.

Denmark

1950: Urban agglomeration of 250 or more inhabitants.

1955: Urban agglomeration of 250 or more inhabitants.

1960: Provincial capitals plus capital city.

1965: Provincial capitals plus capital city.

1970: Agglomerations of 200 or more inhabitants.

1981: Not available.

Estonia

1959: Cities, towns and urban-type localities.

1970: Cities and urban-type localities, officially designated as such by each of the constituent Republics, usually according to the criteria of number of inhabitants and predominance of agricultural, or number of non-agricultural workers and their families.

1979: Cities and urban-type localities, officially designated as such, usually according to the criteria of number of inhabitants and predominance of agricultural, or number of non-agricultural workers and their families.

1989: Cities and urban-type localities, officially designated as such, usually according to the criteria of number of inhabitants and predominance of agricultural, or number of non-agricultural workers and their families.

Faeroe Islands

1960: Towns of more than 200 inhabitants.

1966: Towns of more than 200 inhabitants.

1970: Thorshavn.

Finland

1950: Localities legally established as towns or market towns (kaupungit, kauppalat).

1960: Urban communes.

1970: Localities.

1985: Settlements of 200 or more inhabitants where buildings are not more than 200 meters apart.

France

1954: Communes having 2,000 or more inhabitants in the administrative centre.

1962: Communes containing an agglomeration of more than 2,000 inhabitants living in contiguous houses or with not more than 200 meters between houses, also communes of which the major portion of the population is multicommunal agglomeration of this nature.

1968: Communes containing an agglomeration of more than 2,000 inhabitants living in contiguous houses or with not more than 200 meters between houses, also communes of which the major portion of the population is multicommunal agglomeration of this nature.

1982: Communes containing an agglomeration of more than 2,000 inhabitants living in contiguous houses or with not more than 200 meters between houses, also communes of which the major portion of the population is multicommunal agglomeration of this nature.

Germany

1992: *Kreisfreie Städte,* towns not attached to *Landkreise* (administrative districts).

Former German Democratic Republic

1950: Communities with 2,000 or more inhabitants.
1964: Communities with 2,000 or more inhabitants.
1971: Communities with 2,000 or more inhabitants.
1981: Communities with 2,000 or more inhabitants.

Hungary

1949: Autonomous cities and county towns.
1960: Budapest and all legally designated towns.
1970: Budapest and all legally designated towns.
1980: Budapest and all legally designated towns.
1990: Budapest and all legally designated towns.

Iceland

1950: Agglomerations of 200 or more inhabitants.
1960: The capital with suburbs.
1970: Localities of 200 or more inhabitants.

Ireland

1951: Cities and towns including suburbs of 1,500 or more inhabitants.
1956: Cities and towns including suburbs of 1,500 or more inhabitants.
1961: Cities and towns including suburbs of 1,500 or more inhabitants.
1966: Cities and towns including suburbs of 1,500 or more inhabitants.
1971: Cities and towns including suburbs of 1,500 or more inhabitants.
1986: Cities and towns including suburbs of 1,500 or more inhabitants.

Isle of Man

1951: Towns of Castletown, Douglas, Peel and Ramsey.
1961: Towns of Castletown, Douglas, Peel and Ramsey.
1966: Towns of Castletown, Douglas, Peel and Ramsey.
1971: Towns of Castletown, Douglas, Peel and Ramsey.
1976: Towns of Castletown, Douglas, Peel and Ramsey.
1986: Borough of Douglas, town and village districts.

Italy

1961: Not available.

Latvia

1959: Cities, towns and urban-type localities.

1970: Cities and urban-type localities, officially designated as such by each of the constituent Republics, usually according to the criteria of number of inhabitants and predominance of agricultural, or number of non-agricultural workers and their families.

1979: Cities and urban-type localities, officially designated as such, usually according to the criteria of number of inhabitants and predominance of agricultural, or number of non-agricultural workers and their families.

1989: Cities and urban-type localities, officially designated as such, usually according to the criteria of number of inhabitants and predominance of agricultural, or number of non-agricultural workers and their families.

Lithuania

1959: Cities, towns and urban-type localities.

1970: Cities and urban-type localities, officially designated as such by each of the constituent Republics, usually according to the criteria of number of inhabitants and predominance of agricultural, or number of non-agricultural workers and their families.

1979: Cities and urban-type localities, officially designated as such, usually according to the criteria

of number of inhabitants and predominance of agricultural, or number of non-agricultural workers and their families.

1989: Cities and urban-type localities, officially designated as such, usually according to the criteria of number of inhabitants and predominance of agricultural, or number of non-agricultural workers and their families.

Luxembourg

1960: Communes having more than 2,000 inhabitants in the administrative centre.

1966: Communes having more than 2,000 inhabitants in the administrative centre.

1970: Communes having more than 2,000 inhabitants in the administrative centre.

Malta

1948: Old walled cities and their outgrowths bordering the Grand Harbour.

1957: Old walled cities and their outgrowths bordering the Grand Harbour.

1967: Towns of 1,500 or more inhabitants.

Netherlands

1961: Urban: Municipalities with a population of 2,000 and more inhabitants. Semi-urban: Municipalities with a population of less than 2,000 but with not more than 20 per cent of their economically active male population engaged in agriculture, and specific residential municipalities of commuters.

1971: Urban: Municipalities with a population of 2,000 and more inhabitants. Semi-urban: Municipalities with a population of less than 2,000 but with not more than 20 per cent of their economically active male population engaged in agriculture, and specific residential municipalities of commuters.

Norway

1950: Including suburbs and other agglomerations of 100 or more inhabitants (or 20 dwelling units).

1960: Town municipalities.

1970: Localities of 200 or more inhabitants.

1980: Localities of 200 or more inhabitants.

Poland

1950: Towns, i.e., localities having an urban administrative organization with a mayor or president.

1960: Towns and settlements of urban type, e.g. workers' settlements, fishermen's settlements, health resorts.

1970: Towns and settlements of urban type, e.g. workers' settlements, fishermen's settlements, health resorts.

1978: Towns and settlements of urban type, e.g. workers' settlements, fishermen's settlements, health resorts.

1988: Towns and settlements of urban type, e.g. workers' settlements, fishermen's settlements, health resorts.

Portugal

1950: Agglomerations of 2,000 or more inhabitants.

1960: Agglomerations of 2,000 or more inhabitants.

1981: Agglomerations of 10,000 or more inhabitants.

Republic of Moldova

1959: Cities, towns and urban-type localities.

1970: Cities and urban-type localities, officially designated as such by each of the constituent Republics, usually according to the criteria of number of inhabitants and predominance of agricultural, or number of non-agricultural workers and their families.

1979: Cities and urban-type localities, officially designated as such, usually according to the criteria of number of inhabitants and predominance of agricultural, or number of non-agricultural workers and their families.

1989: Cities and urban-type localities, officially designated as such, usually according to the criteria

of number of inhabitants and predominance of agricultural, or number of non-agricultural workers and their families.

Romania

1948: Cities and towns, i.e., places with urban status regardless of size.

1956: Cities and towns established by law.

1966: Cities, towns and 183 other localities (comprising 13 per cent of total urban population) having urban socio-economic characteristics.

1977: Cities, towns and 183 other localities (comprising 13 per cent of total urban population) having urban socio-economic characteristics.

Russian Federation

1959: Cities, towns and urban-type localities.

1970: Cities and urban-type localities, officially designated as such by each of the constituent Republics, usually according to the criteria of number of inhabitants and predominance of agricultural, or number of non-agricultural workers and their families.

1979: Cities and urban-type localities, officially designated as such, usually according to the criteria of number of inhabitants and predominance of agricultural, or number of non-agricultural workers and their families.

1989: Cities and urban-type localities, officially designated as such, usually according to the criteria of number of inhabitants and predominance of agricultural, or number of non-agricultural workers and their families.

San Marino

1976: Not available.

Spain

1970: Not available.

1981: Municipios of 2,000 or more inhabitants.

Sweden

1950: Administrative towns, not including market towns and municipalities.

1960: Built-up areas with at least 300 inhabitants and usually not more than 200 meters between houses.

1965: Built-up areas with at least 300 inhabitants and usually not more than 200 meters between houses.

1970: Built-up areas with at least 300 inhabitants and usually not more than 200 meters between houses.

1975: Built-up areas with at least 300 inhabitants and usually not more than 200 meters between houses.

Switzerland

1950: Communes of 10,000 or more inhabitants, including suburbs.

1960: Communes of 10,000 or more inhabitants, including suburbs.

1970: Communes of 10,000 or more inhabitants, including suburbs.

1980: Communes of 10,000 or more inhabitants, including suburbs.

Ukraine

1959: Cities, towns and urban-type localities.

1970: Cities and urban-type localities, officially designated as such by each of the constituent Republics, usually according to the criteria of number of inhabitants and predominance of agricultural, or number of non-agricultural workers and their families.

1979: Cities and urban-type localities, officially designated as such, usually according to the criteria of number of inhabitants and predominance of agricultural, or number of non-agricultural workers and their families.

1989: Cities and urban-type localities, officially designated as such, usually according to the criteria of number of inhabitants and predominance of agricultural, or number of non-agricultural workers and

their families.

United Kingdom

England and Wales

1951: Cities, municipal boroughs and urban districts classified as such for local government purposes.

1961: Area classified as urban for local government purposes, i.e., county boroughs, municipal boroughs and urban districts.

1971: Area classified as urban for local government purposes, i.e., county boroughs, municipal boroughs and urban districts.

Northern Ireland

1951: Cities, municipal boroughs and urban districts.

1961: Administrative county boroughs, municipal boroughs and urban districts.

1966: Administrative county boroughs, municipal boroughs and urban districts.

1971: Administrative county boroughs, municipal boroughs and urban districts.

Scotland

1951: Cities and all burghs, towns and villages of 1,000 or more inhabitants.

1961: Cities and burghs.

1966: Cities and burghs.

1971: Cities and burghs.

1981: Agglomerations of 1,000 or more inhabitants.

Yugoslavia (former SFRY)

1948: Administrative units governed by a City People's Committee.

1953: Administrative units governed by a City People's Committee.

1961: Localities of 15,000 or more inhabitants; localities of 5,000-14,999 inhabitants of which at least 30 per cent are not engaged in agriculture; localities of 3,000-4,999 inhabitants of which at least 70 per cent are not engaged in agriculture; and localities of 2,000-2,999 inhabitants of which at least 80 per cent are not engaged in agriculture.

1971: Not available.

1981: Localities officially designated as such.

OCEANIA

Australia

1954: Capital cities of states and territories, other cities which are separately incorporated and other agglomerations within boundaries determined for census purposes and classified as urban.

1961: For the larger urban centres: Population clusters of 1,000 or more persons having a minimum density of 500 persons per square mile and some areas of lower population and/or density classified on other grounds (e.g., holiday areas). For other urban centres: Built-up area as determined from aerial photographs.

1966: For the larger urban centres: Population clusters of 1,000 or more persons having a minimum density of 500 persons per square mile and some areas of lower population and/or density classified on other grounds (e.g., holiday areas). For other urban centres: Built-up area as determined from aerial photographs.

1971: Population clusters of 1,000 or more inhabitants and some areas of lower population (e.g. holiday areas), if they contain 250 or more dwellings of which at least 100 are occupied.

1981: Population clusters of 1,000 or more inhabitants and some areas of lower population (e.g. holiday areas), if they contain 250 or more dwellings of which at least 100 are occupied.

1986: Population clusters of 1,000 or more inhabitants and some areas of lower population (e.g. holiday areas), if they contain 250 or more dwellings of which at least 100 are occupied.

Fiji

1956: Suva city, towns and townships.

1966: Not available.
1976: Not available.
1986: Not available.

Guam

1970: Localities of 2,500 inhabitants or more.

Kiribati

1968: Not available.
1973: Not available.

New Caledonia

1963: City of Nouméa.
1976: Centres with population of 500 or more with commerce, administrative centres or other public places.
1983: Nouméa and communes of Païta, Dumbéa and Mont-Dore.
1989: Nouméa and communes of Païta, Dumbéa and Mont-Dore.

New Zealand

1951: Localities defined as central cities, adjacent boroughs and the urbanized parts of contiguous counties, according to revision of boundaries made in 1951.
1956: Cities, boroughs and all town districts.
1961: Cities, boroughs and all town districts.
1968: Cities, boroughs and all town districts.
1971: All cities, plus boroughs, town districts, townships and country towns with a population of 1,000 or more.
1986: All cities, plus boroughs, town districts, townships and country towns with a population of 1,000 or more.

Niue

1977: Not available.
1981: Not available.

Papua New Guinea

1966: Centres with population of 500 or more but excluding separately located schools, hospitals, missions, plantations, rural settlements and rural villages regardless of population size.
1971: Centres with population of 500 or more but excluding separately located schools, hospitals, missions, plantations, rural settlements and rural villages regardless of population size.
1980: Centres with population of 500 or more but excluding separately located schools, hospitals, missions, plantations, rural settlements and rural villages regardless of population size.
1991: Urban agglomerations of 1,000 or more persons.

Samoa

1951: Urban area of Apia, comprising the Falpule districts of Valmauga West and Foleata East.
1956: Urban area of Apia, comprising the Falpule districts of Valmauga West and Foleata East.
1961: Urban area of Apia, comprising the Falpule districts of Valmauga West and Foleata East.
1966: Urban area of Apia, comprising the Falpule districts of Valmauga West and Foleata East.
1971: Urban area of Apia, comprising the Falpule districts of Valmauga West and Foleata East.
1976: Urban area of Apia, comprising the Falpule districts of Valmauga West and Foleata East.

Solomon Islands

1970: Township of Honiara.
1976: Honiara and three other townships.

Tonga

1986: Greater Nuku'alofa (Kolomotu'a and Kolofo'ou Districts).

Vanuatu

1967: Not available.
1989: Luganville centre and Vila urban.

B. NOTES ON THE STATISTICAL TABLES

Although it is the aim of the present *Compendium* to present data in a form which is as internationally comparable as possible, there are sometimes significant differences among countries in the concepts, definitions and classifications used. To facilitate comparisons, definitions recommended by the United Nations are given in the following notes on each table, and, as far as possible, general departures from these definitions in the tables are noted as they occur.

The main benchmark data sources for most population and housing statistics are national population and housing censuses. The internationally recommended concepts and definitions for carrying out population and housing censuses are published in *the Principles and Recommendations for Population and Housing Censuses*[3] and also in *Supplementary Principles and Recommendations for Population and Housing Censuses*[4].

Table 1

Table 1 presents for each country or area of the world the total, male and female population enumerated at the latest population census, estimates of the mid-year total population for 1985 and 1992, the average annual exponential rate of increase (or decrease) for the period 1985 to 1992, and the surface area and the population density for 1992.

The total, male and female population is, unless otherwise indicated, the de facto (present-in-area) population enumerated at the most recent census for which data are available. The date of this census is given. Unless otherwise indicated, population census data are the results of a nation-wide enumeration. If, however, a nation-wide enumeration has never taken place, the results of a sample survey, essentially national in character, are presented. Results of surveys referring to less than 50 percent of the total territory or population are not included.

Mid-year population estimates refer to the de facto population on 1 July. In some areas the mid-year population has been calculated by the United Nations Statistical Division as the mean of two year-end official estimates. Mid-year estimates, calculated in this manner, are assumed to be sufficiently similar to official estimates for the population on 1 July; they, therefore, have not been footnoted.

Mid-year estimates of the total population are those provided by national statistical offices, unless otherwise indicated. As needed, these estimates are supplemented by mid-year population estimates prepared by the Population Division of the United Nations Secretariat[5] when, for example, official mid-year estimates of the total population either are not available or have not been revised to take into account the results of a recent population census or sample survey. The United Nations Secretariat estimates are identified with a superscript (x) and are based on data available in 1992 including census and survey results, taking into account the reliability of base data as well as available fertility, mortality, and migration data.

The policy of using United Nations Secretariat estimates is designed to produce comparable mid-year estimates for population for 1985 and 1992. Unrevised official estimates as well as results of censuses or surveys and estimates for dates other than the mid-year have been eliminated in favor of the United

Nations Secretariat consistent mid-year estimates.

Surface area, expressed in square kilometers, refers to the total surface area, comprising land area and inland waters (assumed to consist of major rivers and lakes) and excluding only polar regions and uninhabited islands. Exceptions to this are noted. Surface areas, originally reported in square miles, have been converted to square kilometers using a conversion factor of 2.589988.

The annual rate of increase is the average annual percentage rate of population growth between 1985 and 1992, computed using the mid-year estimates (unrounded) presented in this table using an exponential rate of increase.

Although mid-year estimates presented in this table appear only in thousands, unrounded figures, when available, have been used to calculate the rates of population increase. It should be noted that all United Nations Secretariat estimates used to calculate these rates are rounded.

Density is the number of persons in the 1992 total population per square kilometer of total surface area.

Each country or area has been asked to provide information on the method it has used in preparing the official mid-year population estimates shown in this table. Information referring to the 1992 estimates has been coded and appears in the column entitled 'Type'. The four elements of the quality code which appear in this column relate to the nature of the base data, the recency of the base data, the method of time adjustment and the quality of that adjustment, respectively. This quality code is explained in detail below.

As early as the beginning of 1950's a code was developed to describe the manner in which the estimates of total population were constructed. This code has subsequently been modified and expanded. The present code was instituted in 1958, and it is constructed to take into account four elements which have been recognized as affecting the reliability of population estimates: (1) the nature of the base measurement of the population, (2) the time elapsed since the last measurement, (3) the method of time adjustment by which the base figure was brought up to date, and (4) the quality of time adjustment. The revised code is thus composed of four parts, namely, the nature of the base data, their recency, the nature of time adjustment and its quality[6]. The symbols of the code are listed below:

Part I. Nature of base data (capital letter)
A -> Complete census of individuals.
B -> Sample survey.
C -> Partial census or partial registration of individuals.
D -> Conjecture.
... -> Nature of base data not determined.

Part II. Recency of base data (subscript numeral following capital letter)
Numeral indicates time elapsed (in years) since establishment of base figure.

Part III. Method of time adjustment (lower-case letter)
a -> Adjustment by continuous population register.

[6] For detailed explanation of the content of each category of the code, see Demographic Yearbook 1964 (United Nations publication, Sales No. 65.XIII.1).

b -> Adjustment based on calculated balance of births, deaths and migration.
c -> Adjustment by assumed rate of population increase.
d -> No adjustment: base figure held constant at least two consecutive years.
... -> Method of time adjustment not determined.

Part IV. Quality of adjustment for types a and b (numeral following letter a or b)
1 -> Population balance adequately accounted for.
2 -> Adequacy of accounting for population balance not determined but assumed to be adequate.
3 -> Population balance not adequately accounted for.

Quality of adjustment for types c (numeral following letter c)
1 -> Two or more censuses taken at decennial intervals or less.
2 -> Two or more censuses taken, but latest interval exceeds a decennium.
3 -> One or no census taken.

In addition to these four points, it would have been desirable to consider the probable error in the base measurement of the population. However, this has not been possible as an indication or it is so rarely available.

This quality code is the basis of determining which mid-year estimates are considered reliable. In brief, reliable mid-year population estimates are those which are based on a complete census (or a sample survey) and have been adjusted by a continuous population register or adjusted on the basis of the calculated balance of births, deaths and migration. Mid-year estimates of this type are considered reliable. Mid-year estimates which are not calculated on this basis are considered less reliable. Estimates for years prior to 1992 are considered reliable or less reliable on the basis of the 1992 quality code.

All surface area data are assumed to be reliable. Population density data, however, are considered reliable or less reliable on the basis of the reliability of the 1992 population estimates used as the numerator.

Statistics on the total population enumerated at the time of the census, estimates of the mid-year total population and surface area data are subject to the same qualifications as have been mentioned above.

Regarding the limitations of census data, it should be noted that although census data are considered reliable, the actual quality of census data varies widely from one country or area to another. When known, an estimate of the extent of over-enumeration or underenumeration is given. In the case of sample surveys, a description is given of the population covered.

A most important limitation affecting mid-year population estimates is the variety of ways in which they have been prepared. As described above, the column entitled 'Type' presents a quality code which provides information on the method of estimation. The first element of the quality code refers to the type of base data used to prepare estimates. This may give some indication of the confidence which may be placed on these estimates. Other things being equal, estimates made on the basis of codes 'A' or 'B' are better than estimates made on the basis of codes 'C' or 'D'. However, no distinction has been made with respect to the quality of these base data. Another indicator of quality may be obtained from the second element of the quality code which provides information on the recency of the base data used in preparing estimates.

It is important to keep in mind that information used to prepare these codes may be inadequate or

incomplete in some cases. These codes, once established, may not always reflect the most current estimating procedures used by individual countries or areas.

It should be emphasized that, as an assessment of the reliability of some of the small populations, the codes are quite inadequate. This is so because some small populations are estimated by methods not easily classifiable by the present scheme, and others are disproportionately affected by the frequent arrival and departure of migrants, visitors, and so forth, with consequent relatively large variations between de facto and de jure population.

Because the reliability of the population estimates for any given country or area is based on the quality code for the 1992 estimate, the reliability of estimates prior to 1992 may be overstated.

The mid-year estimates prepared by the Population Division of the United Nations Secretariat, used to supplement official data in this table, have the advantage of being prepared by a consistent methodology. However, it is very important to note that, among countries or areas, the actual amount of data and the quality of those data upon which the estimates were based vary considerably.

Percentage rates of population growth are subject to all the qualifications of the population estimates mentioned above. In some cases, they admittedly reflect simply the rate calculated or assumed in constructing the estimates themselves when adequate measures of natural increase and net migration were not available. Despite their shortcomings, these rates do provide a useful index for studying population change and, used with proper precautions, they can be useful also in evaluating the accuracy of vital and migration statistics.

Because no indication in the table is given to show which of the mid-year estimates are rounded and which are not, the rates calculated on the basis of these estimates may be much more precise in some cases than in others.

With respect to data on population density, it should be emphasized that density values are very rough indexes, inasmuch as they do not take account of the dispersion or concentration of population within countries or areas nor the proportion of habitable land. They should not be interpreted as reflecting density in the urban sense nor as indicating the supporting power of a territory's land and resources.

Table 2

Table 2 presents population by age and sex for country or area, urban-rural areas and cities for the latest available year between 1980 and 1992.

Data in this table either are from population censuses or are estimates some of which are based on sample surveys. Data refer to the de facto population unless otherwise noted.

Age is defined as age at last birthday, that is, the difference between the date of birth and the reference date of the age distribution expressed in completed solar years. The age classification used in this table is the following: under 1 year, 1-4 years, 5-year groups through 80-84 years, and 85 years and over and age unknown. In the case where data refered to more than one group, figures were displayed as shaded.

The urban-rural classification of population by age and sex is that provided by each country or area; it is presumed to be based on the national census definitions of urban population that have been set

forth at the section 2(c) of these Technical Notes.

Estimates of population by age and sex presented in this table have been limited to countries or areas for which estimates have been based on the results of a sample survey or have been constructed by the component method from the results of a population census or sample survey. Distributions which result when the estimated total population is distributed by age and sex according to percentages in each age-sex group at the time of a census or sample survey are not acceptable, and they have not been included in this table.

Statistics on population by age and sex are subject to the same qualifications as have been set forth for population statistics in general and age distributions in particular.

Comparability of population data classified by age and sex is limited in the first place by variations in the definition of total population, and by the accuracy of the original enumeration. Both of these factors are more important in relation to certain age groups than to others. For example, under-enumeration is known to be more prevalent among infants and young children than among older persons. Similarly, the exclusion from the total population of certain groups which tend to be of selected ages (such as the armed forces) can markedly affect the age structure and its comparability with that for other countries or areas. Consideration should be given to the implications of these basic limitations in using the data.

In addition to these general qualifications are the special problems of comparability which arise in relation to age statistics in particular. Age distributions of population are known to suffer from certain deficiencies which have their origin in irregularities in age reporting. Although some of the irregularities tend to be obscured or eliminated when data are tabulated in five-year age groups rather than by single years, precision still continues to be affected, though the degree of distortion is not always readily discernible.

Another factor limiting comparability is the age classification employed by the various countries or areas. Age may be based on the year of birth rather than the age at last birthday, in other words, calculated using the day, month and year of birth. Distributions based on the year of birth only are footnoted when known.

The absence of frequencies in the unknown age group does not necessarily indicate completely accurate reporting and tabulation of the age item. It is often an indication that the unknowns have been eliminated by assigning ages to them before tabulation, or by proportionate distribution after tabulation.

The comparability of data by urban-rural residence is affected by the national definitions of urban and rural used in tabulating these data. When known, the definitions of urban used in national population censuses are presented in section 2(c). As discussed, these definitions vary considerably from one country or area to another.

Table 3

Table 3 presents economically active population by industry and sex for country or area, urban-rural areas and cities.

The definition of "Economically active", as adopted by the Eighth International Conference of Labour Statisticians in 1954 and developed in *Principles and Recommendations for Population and Housing*

Censuses[7], refers to all persons of either sex who furnish the supply of labour for the production of goods and services during the time reference chosen for the investigation. In brief, it comprises all persons above a specified minimum age engaged in or actively seeking productive work in some branch of the economy during a specified period of time. The labour force is composed of two groups which are generally defined as follows:

"Employed persons" comprise all persons, including unpaid family workers, who worked during the time-reference period established for data on economic characteristics or who had a job in which they had already worked but from which they were temporarily absent because of illness or injury, industrial dispute, vacation or other leave of absence, absence without leave or disorganization of work for reasons such as bad weather or mechanical breakdown.

"Unemployed persons " consist of all persons who, during the reference period, were not working but were seeking work for pay or profit, including those who never worked before. Also included are persons who, during the reference period, were not seeking work because of temporary illness, because they had made arrangements to start a new job subsequent to the reference period or because they were on temporary or indefinite lay-off without pay. Where employment opportunities are very limited, the unemployed may also include persons who were not working and were available for work, but were not seeking it because they believed that no jobs were open. Under this definition, members of the armed forces are considered as economically active and are included in labour force. However, in some countries or areas data on economically active population exclude members of the armed forces.

The not economically active population comprises persons with no economic activity during the reference period. This group normally includes homemakers and students not economically active, retired persons (with or without income), inmates of institutions, all children below the specified minimum age for inclusion in the labour force and so forth.

In recent decades the concept described above was used by a number of national statistical offices in designing censuses and surveys. National experiences in implementing this concept have pointed to, inter alia, the following limitations. First, the notion of seeking work is not applicable in the agricultural and informal sectors of most developing countries. Moreover, in many areas people must create some work to make a living since they are neither fully employed nor fully unemployed. Second, the economic role of women is not treated adequately, and, consequently, the measurement of female labour force is subject to wide margin of error and incompleteness.

The Thirteenth International Conference of Labour Statisticians, which met in October 1982, adopted a new resolution concerning statistics of the economically active population, employment, unemployment and under-employment. This approach has been elaborated in detail in *Supplementary Principles and Recommendations for Population and Housing Censuses*[8]. Conceptually, the "economically active population" comprises all persons of either sex who provide the supply of labour force for the production of economic goods and services, as defined by the United Nations systems of national accounts, during a specified time reference period. According to these systems, the production of economic goods and services includes all production and processing of primary products, whether for the market, for barter or for own consumption, the production of all other goods and services for the market and, in the case of households that produce such goods and services for the market, the corresponding production for own consumption. Production of economic goods and services also

[7] United Nations publication No. E.80.XVII.8.
[8] United Nations publication No. E.90.XVII.9.

includes own-account construction.

Conforming to the above enlarged concept of production of economic goods and services and recognizing the possibility of measuring the economically active population in many different ways, two useful measures of the economically active population were included: (a) the "usually active population", measured in relation to a long reference period such as a year, and (b) the "currently active population" or, equivalently, the "labour force", measured in relation to a short reference period such as one week or one day.

"Usually active population" comprises all persons above a specified age whose main activity status, as determined in terms of number of weeks or days during a long specified period (such as preceding 12 months or the preceding calendar year) was "employed" or "unemployed" as described below.

"Currently active population" (i.e. the labour force) comprises all persons who fulfill the requirements for inclusion among the "employed" or the "unemployed" measured in relation to a short reference period such as one week or one day.

Therefore, both the "usually active" and "currently active" population comprise all persons employed or unemployed during the relevant reference period.

Under the new standards, "employed" comprises all persons above a specified age who were in the following categories:

(a) Paid employment:

- At work: persons who during the reference period performed some work for wage or salary, in cash or kind;

- With a job but not at work: persons who, having already worked in their present job, were temporarily not at work during the reference period and had a formal attachment to their job as evidenced by, for example, a continued receipt of wage/salary, an assurance of return to work following the end of the contingency, an agreement on the date of return following the short duration of absence from the job, etc.

(b) Self-employment:

- At work: persons who during the reference period performed some work for profit or family gain, in cash or in kind;

- With an enterprise but not at work: persons with an enterprise, which may be a business enterprise, a farm or a service undertaking, who were temporarily not at work during the reference period for any specific reason.

"Unemployed" comprises all persons above a specified age who during the reference period were:

(a) Without work, i.e., were not in paid employment or self-employment as defined above.

(b) Currently available for work, i.e., were available for paid employment or self-employment during the reference period.

(c) Seeking work, i.e., had taken specific steps in a specified recent period to seek employment or self-employment. The specific steps may include registration at a public or private employment exchange; application to employers; checking at work sites, farms, factory gates, market or other assembly places; placing or answering newspapers advertisements; seeking assistance of friends and relatives; looking for land, building, machinery or equipment to establish own enterprise; arranging for financial resources; applying for permits and licenses, etc.

"Population not economically active" comprises all persons, irrespective of age, including those below the age specified for measuring the economically active population, who were not "economically active" as specified above. Consistent with the approach for economically active population, the "not economically active population" refers to "population not usually active" and "population not currently active".

The "population not usually active" comprises all persons whose main activity status during the longer reference period was neither employed nor unemployed. It comprises the following functional categories:

(a) Home makers: Persons of either sex, not economically active, who are engaged in household duties in their own home, for example, housewifes and other relatives responsible for the care of the home and children;

(b) Students: Persons of either sex, not economically active, who attend any regular educational institution, public or private, for systematic instruction at any level of education;

(c) Income recipients: Persons of either sex, not economically active, who receive income from property or investments, interest, rents, royalties or pensions from former activities;

(d) Others: Persons of either sex, not economically active, who are receiving public aid or private support, and all other persons not falling into any of the above categories, such as children not attending school.

The "population not currently active" or, equivalently, population not in the labour force, comprises all persons who were neither employed nor unemployed during the short reference period. They are not currently active for reasons of (a) attendance at educational institutions, (b) engagement in household duties, (c) retirement or old age, or (d) other reasons such as infirmity or disablement.

Statistics on economically active population by industry displayed in Table 3 of this *Compendium* refer to the period 1980-1992 and therefore were compiled using one of the two approaches described above. Whenever the information on the concept applied for collecting these data was available, it was described in the footnote. In general, data referring to the most recent years were compiled on the basis on the "currently active population" as described above.

Industry refers to the activity of the establishment in which an employed person worked during the time reference period established for data on economic characteristics (or last worked, if unemployed).

The *International Standard Industrial Classification of All Economic Activities, Revision 3*[9] was used as a source for the classification of industries in Table 3.

[9] United Nations publication No. E.90.XVII.11.

Table 4

Table 4 presents economically active population by occupation and sex for country or area, urban-rural areas and cities.

For detailed explanation of "economically active population" see Technical Notes for Table 3.

Occupation refers to the type of work done during the time reference period by the person employed (or the type of work done previously, if unemployed), irrespective of the industry or the status in employment in which the person should be classified.

Occupational categories displayed in Table 4 are taken from the International Standard Classification of Occupations 1968[10].

Table 5

Table 5 presents resident population by duration and sex for country or area, urban-rural areas and cities.

The concept of resident population is developed on the basis of the "place of usual residence", which is the geographical place where the person usually resides. This may be different from the place where he or she enumerated. There are two different concepts of total population, de facto and de jure. The de facto population includes all persons physically present in the country or area at the reference date. The de jure population, by contrast, includes all usual residents of the given country or area, whether or not they were physically present there at the reference date.

Depending of the concept in use in the specific country or area, the resident population may have different characteristics. For example, civilian aliens temporarily in a specific country or area as short-term workers may officially be considered residents after a stay of a specified period of time or they may be considered as non-residents throughout their stay; at the same time, the same persons may be officially considered as residents or non-residents of the country or area from which they came, depending on the duration and/or purpose of their absence. Furthermore, regardless of the official treatment, individual respondents may apply their own interpretation of residence in responding to the inquiry. In addition, there may be considerable differences in the accuracy with which countries or areas are informed about the number of their residents temporarily out of country or area.

The duration of residence is the interval of time up to the date of enumeration, expressed in completed years, during which each person has lived in the place of usual residence. The emphasis is on the length of residence in an administrative unit, rather than in the particular housing unit.

Data presented in Table 5 refer to resident population. Wherever information and additional explanations are available they are displayed in the footnotes.

Table 6

Table 6 presents data on population, number of households, number of living quarters, average size of households, average number of households in living quarters and average number of persons in living

[10] ISCO-68, International Labour Office, Geneva 1968

quarters for country or area, urban-rural areas and cities.

This table is an introductory table for the part of the *Compendium* focusing on housing conditions in countries or areas and large cities.

Population comprises either all usual residents of the country or area or all persons present in the country or area at the time of enumeration (for more details on de facto and de jure population, see Technical Notes for Table 5).

The concept of "household" is based on the arrangements made by persons, individually or in groups, for providing themselves with food or other essentials for living. A household may be either (a) a one-person household, that is, a person who makes provision for his or her own food or other essentials for living without combining with any other person to form part of a multiperson household or (b) a multiperson household, that is, a group of two or more persons living together who make common provision for food or other essentials for living. The persons in the group may pool their incomes and have a common budget to a greater or lesser extent; they may be related or unrelated persons or a combination of both.

Data displayed in Table 6 refer in general to households as defined above. Whenever the unit of enumeration differs, it is footnoted.

"Living quarters" are structurally separate and independent places of abode. They may (a) have been constructed, built, converted or arranged for human habitation, provided that they are not at the time of the enumeration used wholly for other purposes and that in the case of mobile housing units, improvised housing units and collective living quarters, they are occupied at the time of the enumeration or (b) although not intended for habitation, actually be in use as such at the time of the enumeration.

The essential features of living quarters are separateness and independence. An enclosure may be considered as separate if surrounded by walls, fences etc. and covered by a roof so that a person or group of persons can isolate themselves from other persons in the community for the purposes of sleeping, preparing and taking their meals or protecting themselves from the hazards of climate or environment. Such an enclosure can be considered as independent when it has direct access from the street or from a public or communal staircase, passage, gallery or grounds, i.e. when the occupants can come in or go out of their living quarters without passing through anybody else's premises.

Attached rooms having an independent entrance, or detached rooms for habitation which have clearly been built, rebuilt, converted etc., to be used as a part of living quarters should be considered as part of living quarters. Thus, the living quarters may consist of rooms or groups of rooms with independent entrances or of separate buildings.

Living quarters may be permanent or semi-permanent buildings or parts of buildings intended for habitation, or natural shelters not intended for habitation but actually used as places of abode at the time of the enumeration. Living quarters originally intended for habitation and used wholly for other purposes at the time of the enumeration should not be normally considered as living quarters, while shelters not intended for habitation but occupied at the time of the enumeration should be considered as living quarters.

The use of separate concepts for household and living quarters permits the identification of groups of persons in need of a separate dwelling. If the household is defined as a group of persons occupying a set of living quarters, the number of households in living quarters and the number of occupied living

quarters will always be equal and there will be no apparent housing need in terms of doubled-up households requiring separate living quarters. If living quarters are defined as the space occupied by a household, the number of households in living quarters will again be equal to the number of living quarters, with the added disadvantage that there will be no record of the number of structurally separate living quarters. However, this approach of using separate concepts of household and living quarters was not applied in most of enumeration exercises conducted by countries or areas, usually leading to the same number of households and living quarters.

The "average size of household" refers to the average number of persons per household. This rate is obtained by dividing the total population by the number of households.

The "average number of households per living quarters" refers to the number of households per living quarters and was obtained by dividing the total number of households by the total number of living quarters. The purpose of this rate was to focus on the need for housing. As discussed above, in relation to separate concepts in enumerating households and living quarters, respectively, the number of households was most usually equal to the number of living quarters, and the rate took the value of 1.

The "average number of persons in living quarters" represents the number of persons per living quarters. It has been obtained by dividing the total number of population by the total number of living quarters. The purpose of displaying this ratio is to enable comparison of crowdedness in living quarters. When data on population and living quarters are not available, data on "population in housing units" and "number of housing units" are shown and footnoted.

Table 7

Table 7 presents data on population by sex, number of households and number of living quarters by type of living quarters for country or area, urban-rural areas and cities.

Population comprises either all usual residents of the country or area or all persons present in the country or area at the time of enumeration (for more details on de facto and de jure population, see Technical Notes for Table 5).

The concept of "household" is based on the arrangements made by persons, individually or in groups, for providing themselves with food or other essentials for living (for more details see Technical Notes for Table 6).

"Living quarters" are structurally separate and independent places of abode (for detailed discussion on the basic definition, see Technical Notes for Table 6). Living quarters are either housing units or collective living quarters.

A "housing unit" is a separate and independent place of abode intended for habitation by one household or not intended for habitation but occupied as living quarters by a household at the time of enumeration. Thus it may be an occupied or vacant dwelling, an occupied mobile or improvised housing unit or any other place occupied as living quarters by a household at the time of the enumeration. This category includes housing of various levels of permanency and acceptability and therefore requires further classification as displayed in Table 7.

"Conventional dwelling" is a room or suite of rooms (for the definition of "room" see Technical Notes for Table 16) and its accessories in a permanent building or structurally separated part thereof, which

by the way it has been built, rebuilt or converted, is intended for habitation by one household and is not, at the time of enumeration, used wholly for other purposes. It should have a separate access to a street (direct or via garden or grounds) or to a common space within the building (staircase, passage, gallery and so on). Examples of conventional dwellings are houses, flats, suits or rooms, apartments, etc. A permanent building is understood to be a structure that may be expected to maintain its stability for 10 years or more.

Therefore, a conventional dwelling is limited to a housing unit located in a permanent building and designed for occupancy by one household. Although a conventional dwelling is a housing unit intended, constructed or converted, for habitation by one household it may, at the time of enumeration, be vacant or occupied by one or more households or by a part of a household.

An "unconventional dwelling" refers to a housing unit that does not meet the criteria of a conventional dwelling but was occupied and used as a housing unit at the time of the enumeration. This category covers several subcategories:

(a) "Mobile housing unit" is any type of living accommodation that has been made to be transported (such as a tent) or is a moving unit (such as a ship, boat, barge, vessel, railroad car, caravan, trailer, yacht, etc.) occupied as a living quarters at the time of enumeration. Mobility in itself is not necessarily a measure of quality.

(b) "Improvised housing unit" is an independent, makeshift shelter or structure built of waste materials and without a predetermined plan, for the purpose of habitation by one household, which is being used as living quarters at the time of enumeration. This type of housing unit is usually found in urban and suburban areas, particularly at the peripheries of the principal cities.

(c) "Housing units in permanent buildings not intended for human habitation" refer to units that have not been built, constructed, converted or arranged for human habitation but which are actually in use as living quarters at the time of the census. These include housing units in stables, barns, mills, garages, warehouses, offices, booths and so forth.

(d) "Other premises not intended for human habitation" refer to living quarters that are not intended for human habitation nor located in permanent buildings but are nevertheless used as living quarters at the time of enumeration. Caves and other natural shelters fall within this subcategory.

As mentioned above, living quarters are either housing units, as described above, or collective living quarters. "Collective living quarters" include structurally separate and independent places of abode intended for habitation by large groups of individuals or several households and are occupied at the time of the enumeration. Such quarters usually have certain common facilities, such as cooking and toilet installations, baths, lounge rooms or dormitories, which are shared by the occupants. Collective living quarters may be further classified as follows:

(a) "Hotels, rooming houses and other lodging houses" comprise permanent structures which provide lodging on a fee basis and in which the number of boarders or lodgers exceeds five. Hotels, motels, inns, boarding houses, pensions, lodging houses etc. fall within this category.

(b) "Institutions" cover any set of premises in a permanent structures designed to house groups (usually large) of persons who are bound by either a common public objective or a common personal interest. In this type of living quarters, persons of same sex frequently share dormitories. Hospitals, military barracks, boarding schools, convents, prisons etc. fall within this category.

(c) "Camps" are set of premises originally intended for the temporary accommodation of persons with common activities or interests. Included in this category are military camps, refugee camps and camps established for the housing of workers in mining, agriculture, public works or other types of enterprises.

(d) "Other" refers to the residual category for collective living quarters which may not conform to the definitions of those included in groups (a) to (c) above.

Whenever the definitions of the categories in Table 7 differed from these presented above, an explanation is displayed in footnotes at the end of the table.

Table 8

Table 8 presents data on homeless population by sex, homeless households and squatter households for country or area, urban-rural areas and cities.

"Homeless population" refers to persons without a shelter that would fall within the category of living quarters, as described in Technical Notes for Table 6 and Table 7.

"Homeless household" refers to a household without a shelter that would fall within the category of living quarters. Members of homeless households carry their few possessions with them, sleeping in the street, in doorways or on piers or in any other space on a more or less random basis.

"Squatter household" refers to a household IN a squatter settlement. "Squatter settlements" refer to housing units constructed or erected on land to which the occupants do not have legal claim. Those housing units most usually fall within the category "unconventional dwellings" as described in Technical Notes for Table 7 and are erected in groups bordering large cities. However, in some countries or areas these settlements may consist of a mixture of conventional and unconventional dwellings.

Only a few countries or areas provide data on homelessness and squatter settlements which raises the need for further development of data collection on these topics.

Table 9

Table 9 presents data on population aged 5-24 attending school by sex for country or area, urban-rural areas and cities.

Population comprises either all usual residents of the country or area or all persons present in the country or area at the time of enumeration (for more details on de facto and de jure population, see Technical Notes for Table 5). Age is defined as age at last birthday, that is, the difference between the date of birth and the reference date of the age distribution expressed in completed solar years (for more details on age distribution see Technical Notes for Table 2).

In general, data presented in Table 9 refer to the population aged 5-24 years. However, this range was not identical for all the countries or areas and cities and whenever it differed, it was so listed in the first column of this table.

"School attendance" is defined as attendance at any regular accredited educational institution, public or private, for systematic instruction at any level of education at the time of the enumeration, or if the enumeration was taken during the vacation period at the end of school year, during the last school year.

Instruction in particular skills, which is not part of the recognized educational structure of the country (e.g. in-service training courses in factories) is not considered as "school attendance" for enumeration purposes.

Table 9 presents data on population aged 5-24 of both sexes, and separately for male and female population, that attended school as defined above during the reference year. This table displays percentage distribution for each of these categories, i.e. a percentage of total population of the above specified age attending school and separate percentage for male and female population of the same age attending school.

Table 10

Table 10 presents data on total and illiterate population aged 15 years and over by sex for country or area, urban-rural areas and cities.

Population comprises either all usual residents of the country or area or all persons present in the country or area at the time of enumeration (for more details on de facto and de jure population, see Technical Notes for Table 5). Age is defined as age at last birthday, that is, the difference between the date of birth and the reference date of the age distribution expressed in completed solar years (for more details on age distribution see Technical Notes for Table 2).

In general, data presented in Table 10 refer to the population aged 15 years and over. However, this range was not identical for all the countries or areas and cities and whenever it differed, it was so footnoted and displayed at the end of the table.

"Literacy" is the ability both to read and write. A person is literate who can, with understanding, both read and write a short, simple statement on his or her everyday life. Hence, a person capable of reading and writing only figures and his or her own name should be considered illiterate, as should a person who can read but not write and one who can read and write only a ritual phrase which has been memorized. Because of the possible reluctance of some illiterate persons to admit to their illiteracy and the difficulties of applying a test of literacy, the data collected may not be highly accurate.

Table 10 presents data on population aged 15 years and over of both sexes, and separately for male and female population, that were illiterate as defined above during the reference year. This table displays percentage distribution for each of these categories, i.e. a percentage of total population of the above specified age that was illiterate and separate percentage for illiterate male and female population of the same age.

Table 11

Table 11 presents data on population estimates, projections and growth rates for 1995 and 2000: 100 world's largest agglomerations, ranked by population size in 1995.

The source of data for this table is United Nations Population Division's publication *World Urbanization Prospects - The 1994 Revision* [11] . The method used for projecting city populations is presented in detail in *Patterns of Urban and Rural Population Growth* [12] and also in *Estimates and*

[11] World Urbanization Prospects - The 1994 Revision, United Nations Publication Sales No. E.95.XIII.12, New York, 1995
[12] Patterns of Urban and Rural Population Growth, United Nations Publication No. E.79.XIII.9, New York, 1980

Projections of Urban, Rural and City Populations, 1950-2025: The 1980 Assessment [13].

Projection of city populations is fraught with hazards. It is a commonplace observation in the social and physical sciences that the behavior of large aggregates is more predictable and regular than that of the individual elements which constitute the aggregate. This dictum surely applies to urban aggregates and the individual places that comprise them. A city may experience sudden growth or decline from a huge number of local factors, some of which may become continuing features of the environment and others of which may be transitory. The annual growth rate refers to the percentage of population increase per annum.

For the purposes of projecting city populations the use of estimates approximating the concept or urban agglomeration, as it is described in Section (b) of these Technical Notes, was applied. The goal of using the urban agglomeration concept in every instance could not be achieved, as for many countries data on administrative city areas only are available. Even these data can be quite adequate in many countries where local administrative changes occur with sufficient frequency so that it can be assumed that city boundaries tend to be widened in conformity with the expansion of the growing agglomerations. In many other countries, however, the local administrative limits are more rigid, so that this does not usually happen. For a number of countries, two types of data were found, namely, for administrative (city proper) and for metropolitan areas (urban agglomerations); in these instances, the metropolitan data were usually preferred because they may differ from the agglomeration to a lesser extent than the administrative data, even though the size of the agglomeration may thereby be somewhat exaggerated. For these and other reasons, it cannot be claimed that strictly comparable population estimates have been achieved for all cities; hence, comparisons of their population sizes and trends should be made with all necessary reservations.

The method used for projecting city populations is similar to that used for urban populations (for more details see Technical Notes for Table 27). The city growth rate was successively modified during the projection period to approach linearly an expected value that is based on the size of the city and the urban growth rate for the country or area.

Table 12

Table 12 presents data on land use in thousands hectares, 1987 and 1992 for world, regions, country or area.

The source for this table is Food and Agriculture Organization of the United Nations Production Yearbook 1993, Vol.47.[14]

It should be borne in mind that definitions used by reporting countries vary considerably and items classified under the same category often relate to greatly differing kinds of land.

"Total area": the total area of the country or area, including area under inland water bodies. Possible variations in the data regarding the previous issue of this *Compendium* may be due to updating and revisions of the country data and not necessarily to any change of area.

---

[13] Estimates and Projections of Urban, Rural and City Populations, 1950-2025: The 1980 Assessment, United Nations Publication ST/ESA/SER.R/45, New York, 1982

[14] FAO Statistics Series No. 117, Food and Agriculture Organization of the United Nations, Rome, 1994.

"Land area": total area, excluding area under inland water bodies. The definition of inland water bodies generally includes major rivers and lakes. If land area is not shown, the area under inland water bodies is included in the category "Other land".

"Arable land": land under temporary crops (double-cropped areas are counted only once), temporary meadows for mowing or pasture, land under market and kitchen gardens (including cultivation under glass) and land temporarily fallow (less than five years). The abandoned land resulting from shifting cultivation is not included in this category. Data for arable land are not meant to indicate the amount of land that is potentially cultivable.

"Land under permanent crops": land cultivated with crops that occupy the land for long period and need not be replanted after each harvest, such as cocoa, coffee and rubber; this category includes land under shrubs, fruit trees, nut trees and vines, but excludes land under trees grown for wood and timber.

"Permanent meadows and pastures": land used permanently (five years or more) for herbaceous forage crops, either cultivated or growing wild (wild prairie or grazing land). The dividing line between this category and the category "Forests and woodland" is rather indefinite, especially in the case of shrubs, savannah, etc., which may have been reported under either of these two categories.

"Forests and woodland": land under natural or planted stands of trees, whether productive or not. This category includes land from which forests have been cleared but that will be reforested in the foreseeable future. The question of shrub land, savannah, etc. raises the same problem as in the category "Permanent meadows and pastures".

"Other land": any other land not specifically listed under items above. This category includes built-up areas, roads, barren land, etc., for which no specific data are available.

The following are specific country notes pertaining to land-use categories:

Australia - Data on arable land include about 27 million hectares of cultivated grassland.
Cuba - Data on arable land and land under permanent crops refer to the state sector and to entailed land only.
Egypt - "Other land" includes rough grazing land.
Germany - Data on arable land and land under permanent crops, permanent meadows and pastures, and forests and woodland are for holdings of 1 hectare and above and holdings of less than 1 hectare whose production market value exceeds a fixed minimum.
Greenland - "Total area" refers to area free from ice.
Mauritius - Data on total area exclude dependencies.
Portugal - Data on arable land and land under permanent crops include about 800,000 hectares of temporary crops grown in association with permanent crops and forests.
Russian Federation - Data on total area exclude the portion of land under the White Sea and the Azov Sea.
Switzerland - Data from 1992, with the exception of "Total area" are not comparable with those of the previous years because of a new statistical method recently applied by the country.

Table 13

Table 13 presents data on urban land use for country or area and cities.

"Total urban land area": This category refers to two cases. In the first case, when data refer to the

country or area, this category comprises all urban land area within the specific country or area, including inland and internal waters (rivers, lakes, ponds) in the boundaries of urban areas of the country or area (for definition of urban area, see item 2(c) of these Technical Notes), expressed in square kilometers. In the second case, when data refer to cities, this category comprises all land area, inland and internal waters (rivers, lakes, ponds) in the city boundaries, expressed in square kilometers. The city, for the purpose of data collection and presentation in this publication, is defined as administrative city. An administrative city is defined according to legal/political boundaries established in each country for each city. If data for urban agglomeration were received, they were displayed and footnoted. An urban agglomeration comprises the city or town proper and also suburban fringe or thickly settled territory lying outside, but adjacent to, its boundaries. Where data were referring to some other administrative unit (e.g. provinces, metropolitan area, etc.) they were so footnoted.

"Built-up land": This category covers all land which is occupied by houses, roads, mines and quarries and any other facilities, including their auxiliary spaces, deliberately installed for the pursuit of human activities. Included are also certain types of open land (non-built-up land), which are closely related to these activities, such as waste strips, derelict land in built-up areas, junk yards, city parks and gardens, etc.

"Residential": This category relates to land which is mainly covered by residential or mainly residential buildings, irrespective of whether they are actually occupied or temporarily vacant. Included in residential land are attached private gardens and small green areas, which are mainly used by inhabitants of the buildings to which they are attached. Residential areas also comprise parking facilities and small playgrounds, which are essentially reserved for use by the local population. This category includes areas occupied by marginal settlements and one or more storey buildings.

"Industrial": This category encompasses land on which mainly industrial activities (mining, quarrying and manufacturing) are pursued, including all auxiliary grounds, such as private roads, parking, storage grounds, office grounds, etc. Also included is land used by enterprises primarily engaged in construction work.

"Commercial": Land mainly used for commerce, trade and related services, such as shopping centres, banks, commercial garages, repair shops, commercial storage facilities, related office buildings.

"Transportation": This category covers land used for public and private railways, operating on a commercial basis, public roads, land used for high-voltage transmission lines and surface pipelines for the transport of fuels and other products, airports, land used for installations of the telecommunications system, etc. Included also is the land used for transport-related office and other service buildings and installation, such as stations, airport buildings, storage facilities for equipment and repair workshops, space used for sidewalks, grass slopes along railways, windshelter belts along roads, open noise abatement areas around airports as well as any other space needed. Therefore this category includes land under motorways, land under other roads and streets including bus-stations, land under railway including railway stations, land under airports and related facilities, land under harbour and related storage facilities, land under high-voltage transmission lines and under surface pipelines for the transport of fuel and other products, and any other land related to transportation facilities not stated above (e.g. subway network).

"Recreation": This category relates to land used for purposes of recreation, e.g., sportsfields, gymnasia, major playgrounds, major public parks and green areas, public beaches and swimming pools, camping sites, areas mainly occupied by major facilities for tourism, secondary residences, vacation houses, etc.

"Other built-up areas": This category refers to (a) land used for public service and facilities, i.e. land used for public administration at the national, provincial or local level, public power stations and water works, schools, hospitals, churches and other social and cultural facilities; (b) land of mixed use, i.e. land to which no single main use can be identified; (c) land use for the disposal of municipal waste; (d) land used for the disposal of industrial and commercial wastes, including junk yards, and (e) any other land related to built-up areas.

"Agricultural land": This category refers to the major classes of land use in agricultural holdings and includes (a) arable land; (b) land under permanent crops; (c) land under permanent pastures and meadows; (d) rough grazing; (e) land under farm buildings' yards and their annexes; (f) all other agricultural land.

"Forest and woodland": This category includes all the land with a "forest cover", i.e., with trees whose crown cover, actually or potentially, more than 20 per cent of the area. Included are all plantations used for forestry purposes, forest road, forests in national parks. Excluded are isolated groups of trees smaller than 0.5 ha, city parks and gardens, and areas not meeting the conditions of forest.

"Inland waters": This category refers to all waters which are above the highwater mark along the coasts, and, in estuaries, on the landward side of the line of the mean tidal level. This category comprises (a) rivers, torrents, brooks, streams, etc; (b) inland sea (freshwater or saline), lakes, ponds; (c) artificial water impoundment; (d) coastal lagoons and coastal land-locked water bodies.

"Other": This category refers to all the land area not classified above. It may refer to open wetlands (bogs, fens, marshes, wet tundra), heathland (dry tundra, mountainous grassland).

Table 14

Table 14 presents data on conventional dwellings constructed annually for country or area, urban-rural areas and cities.

A "conventional dwelling" is a room or suite of rooms (for the definition of "room" see Technical Notes for Table 16) and its accessories in a permanent building or structurally separated part thereof, which by the way it has been built, rebuilt or converted, is intended for habitation by one household and is not, at the time of enumeration, used wholly for other purposes. It should have a separate access to a street (direct or via garden or grounds) or to a common space within the building (staircase, passage, gallery and so on). Examples of conventional dwellings are houses, flats, suits or rooms, apartments, etc. A permanent building is understood to be a structure that may be expected to maintain its stability for 10 years or more (for more details on dwellings and living quarters see Technical Notes for Table 6 and Table 7).

In general, data presented in Table 14 refer to conventional dwellings whose construction has been completed in the reference year shown in the heading of the table. However, in some countries and areas data on construction are based on registering licenses or permits to build a conventional dwelling, and if data referred to permits or licenses they were displayed and explain in footnotes at the end of the table.

This table also presents construction rates. This rate represents the total number of constructed conventional dwellings (or the number of permits issued, as the case may be) per 1,000 mid-year population. It is obtained by dividing the total number of constructed dwellings by the mid-year estimate

of population expressed in thousands (for more details on mid-year population estimates see Technical Notes on Table 1).

The reference years for this table, as set in the *Human Settlements Statistics Questionnaire 1992* used as source of data, covered the period 1987-1991. However, in some cases countries or areas reported construction statistics for years that were different than these mentioned above. In order to maintain the consistency of the table, only data that matched the years in the heading are presented. However, all data collected are displayed in Table 15.

Table 15

Table 15 presents data on conventional dwellings constructed annually by type of building in which dwellings are located and total number of rooms constructed for country or area, urban-rural residence and cities.

A "conventional dwelling" is a room or suite of rooms (for the definition of "room" see Technical Notes for Table 16) and its accessories in a permanent building or structurally separated part thereof, which by the way it has been built, rebuilt or converted, is intended for habitation by one household and is not, at the time of enumeration, used wholly for other purposes. It should have a separate access to a street (direct or via garden or grounds) or to a common space within the building (staircase, passage, gallery and so on). Examples of conventional dwellings are houses, flats, suits or rooms, apartments, etc. (for more details on dwellings and living quarters see Technical Notes for Table 6 and Table 7).

A "building" is any independent free-standing structure comprising one or more rooms (for definition of room see Technical Notes for Table 16) or other spaces, covered by a roof and usually enclosed within external walls which extend from foundation to the roof. However, in tropical areas, a building may consists of a roof with supports only, that is without constructed walls. A building may consists of one or more dwellings.

"Residential building" refers to a building for which the major part (more than 50 per cent of its gross floor area) is built for dwelling purposes, i.e. for habitation of households.

"Non-residential building" refers to a building where the majority of floor space area is not intended for dwelling but for other purposes such as commercial or industrial or for the provision of services (for example factories, office buildings, government buildings, garages, warehouses, barns and so forth). This category also covers "buildings for persons living in institutions" such as hospital buildings, prisons, military establishments and so forth.

"One- or two-dwelling building" comprises detached, semi-detached row and terraced buildings, with one or two dwellings on one or more floors.

"Multi-dwelling building" includes all residential buildings other than one or two-dwelling building as defined above.

As mentioned in Technical Notes for Table 14 (see above), this table presents all data for five or less years as reported by country or area.

Table 16

Table 16 presents data on occupied housing units by number of rooms, number and percentage, total number of rooms, average size of occupied housing units and average number of persons per room for country and area, urban-rural areas and cities.

A "housing unit" is a separate and independent place of abode intended for habitation by one household or a unit not intended for habitation but actually occupied as a living quarters by a household at the time of the census. Thus it may be an occupied or vacant dwelling, an occupied mobile or improvised housing unit or any other place occupied as living quarters by a household at the time of the enumeration. This category includes housing of various levels of permanency and acceptability and thus requires further classification as presented in details in Technical Notes for Table 7. In general, housing units may be "conventional dwellings" and "unconventional dwellings".

Table 16 presents data on occupied housing units. "Occupancy" refers to whether the dwelling was occupied or vacant at the time of enumeration. In general, a conventional dwelling is considered vacant if indicated by "for rent" or "for sale" signs posted on the dwelling. On the other hand, an unconventional dwelling has to be occupied in order to be enumerated as a housing unit, meaning that there cannot be "vacant unconventional dwellings".

It has to be borne in mind that vacant units intended for seasonal occupancy may represent a substantial proportion of the housing inventory in resort areas and in areas where large numbers of seasonal workers are employed. Also, whether living quarters whose occupants are temporarily absent or temporarily present should be treated as occupied or vacant has to be considered in relation whether a de jure or de facto enumeration has been carried out (for details on de jure and de facto enumeration see Technical Notes for Table 2).

A "room" is defined as a space in a housing unit or other living quarters enclosed by walls reaching from the floor to the ceiling or roof covering, or at least to a height of 2 meters, of a size large enough to hold a bed for an adult, that is, at least 4 square meters. The total number of rooms, therefore, includes bedrooms, dining-rooms, living rooms, studies, habitable attics, servants' rooms, kitchens, rooms used for professional or business purposes and other separate spaces used or intended for dwelling purposes, so long as they meet the criteria of walls and floor space. Passageways, verandas, lobbies, bath-rooms, and toilet rooms are not expected to be counted as rooms, even if they meet the criteria. Exceptions to this are footnoted at the end of Table 16.

This table presents data on occupied housing units by number of rooms. The classification is as follows: one-room units, two-room units, three-room units, four-room units, five or more-room units and unknown. In addition, percentage distribution of these categories has also been provided.

The category "Total number of rooms for all units" is self-explanatory. When the information for this category was not reported, but data on the number of housing units using the above-mentioned classification were available, the total number of rooms, as an approximation, was computed by the United Nations. Each such case has been footnoted and explained at the end of Table 16.

The "Average size of occupied housing units" refers to the average number of rooms per housing unit. This rate was obtained by dividing the total number of rooms by the total number of housing units as presented in this table.

The "Average number of persons per room" is self-explanatory and was obtained by dividing the

total number of population in occupied housing unit by the total number of rooms as reported by countries or areas. However, all footnotes referring to the calculation of number of rooms by United Nations, as presented above, apply to this rate as well. Also, if the total number of occupants, i.e. population occupying housing units, was not available, and the figure for total population was used to compute this rate, it was so footnoted.

Table 17

Table 17 presents the number of households in occupied housing units by tenure for country and area, urban-rural areas and cities.

The concept of "household" is based on the arrangements made by persons, individually or in groups, for providing themselves with food or other essentials for living. A household may be either (a) a one-person household, that is, a person who makes provision for his or her own food or other essentials for living without combining with any other person to form part of a multiperson household or (b) a multiperson household, that is, a group of two or more persons living together who make common provision for food or other essentials for living. The persons in the group may pool their incomes and have a common budget to a greater or lesser extent; they may be related or unrelated persons or a combination of both (for more details see Technical Notes for Table 6).

"Tenure" refers to the arrangement under which the household occupies its housing unit. "Owner occupant" is a member of household occupying a housing unit who owns that unit, i.e. has a legal title on the housing unit. This category includes those who pay loan on a housing unit or whose housing unit is under mortgage. "Tenant" or "renter" is defined as one occupying a housing unit which is not the property of a tenant, and who pays (in money or kind) for using the unit as a living quarters for his or her household. Those rented housing units may be "government owned" or "privately owned". The category "government owned" refers to units owned by the public sector (central government, local government, public corporations, etc.). "Privately owned" refers to units owned by households or one or more member of the household, private corporations, co-operatives, housing associations, etc.).

Table 18

Table 18 presents data on occupied housing units by water supply system and toilet installation for country and area, urban-rural areas and cities.

A "housing unit" is a separate and independent place of abode intended for habitation by one household or a unit not intended for habitation but actually occupied as a living quarters by a household at the time of the census. Thus it may be an occupied or vacant dwelling, an occupied mobile or improvised housing unit or any other place occupied as living quarters by a household at the time of the enumeration. This category includes housing of various levels of permanency and acceptability and thus requires further classification as presented in details in Technical Notes for Table 7. In general, housing units may be "conventional dwellings" and "unconventional dwellings".

Table 18 presents data on occupied housing units. "Occupancy" refers to whether the dwelling was occupied or vacant at the time of enumeration. In general, a conventional dwelling is considered vacant if indicated by "for rent" or "for sale" signs posted on the dwelling. On the other hand, an unconventional dwelling has to be occupied in order to be enumerated as a housing unit, meaning that there cannot be "vacant unconventional dwellings".

"Water supply system" refers to whether a housing unit had or did not have a piped-water

installation, i.e. whether or not water has been laid on to the housing unit by pipes from a community-wide system or an individual installation, such as a pressure tank, pump, etc. This category has been classified into the following sub-categories: "With piped water inside the unit", "With piped water outside the unit" and "Without piped water". "Piped water inside the housing unit" refers to a unit having a tap inside the unit, disregarding where the tap is actually located and how many taps are installed. "Piped water outside the housing unit" refers to the existence of a tap providing piped water for use of occupants of the housing unit that is located outside the housing unit proper but within a range of 100 meters from the front door of the unit. "Without piped water" refers to units without a tap either within the housing unit or beyond the range of 100 meters from the front door of the unit.

A "toilet" may be defined an installation for the disposal of human excreta. This category comprises three sub-category. "Flush toilet" is an installation connected with piped water, as piped water is described above, arranged for humans to discharge their wastes and from which wastes are flushed by water. If the installation does not have a connection to piped water, than it refers to "Other toilet". If no installation is available for the use of occupants of the housing unit, that refers to "Without toilet of any kind".

The actual location of toilet installation as described above, i.e. whether it is located within the unit or in near vicinity does not affect the classification described above, as long as it was used by the occupants of the unit. Also, this classification has not been affected by the fact that the installation was used exclusively by the occupants of the unit or shared with occupants of other units.

Table 18 also displays percentage distribution of housing units by water supply system and toilet facilities, respectively.

Table 19

Table 19 presents data on occupied housing units by type of lighting and cooking facilities for country and area, urban-rural areas and cities.

A "housing unit" is a separate and independent place of abode intended for habitation by one household or a unit not intended for habitation but actually occupied as a living quarters by a household at the time of the census. Thus it may be an occupied or vacant dwelling, an occupied mobile or improvised housing unit or any other place occupied as living quarters by a household at the time of the enumeration. This category includes housing of various levels of permanency and acceptability and thus requires further classification as presented in details in Technical Notes for Table 7. In general, housing units may be "conventional dwellings" and "unconventional dwellings".

Table 19 presents data on occupied housing units. "Occupancy" refers to whether the dwelling was occupied or vacant at the time of enumeration. In general, a conventional dwelling is considered vacant if indicated by "for rent" or "for sale" signs posted on the dwelling. On the other hand, an unconventional dwelling has to be occupied in order to be enumerated as a housing unit, meaning that there cannot be "vacant unconventional dwellings".

"Lighting" refers to the predominant source of light in the occupied housing unit. Two basic sub-categories refer to "Electricity" meaning that the lighting of the unit has been provided by bulbs or other lighting devices powered by electricity and "Oil lamp", that is all kind of lighting devices powered by oil or gas.

In general, data displayed in this table refer to the predominant way of lighting in the unit. If more

than one type of lighting was used by occupants only the predominant was enumerated. However, in some cases each type of lighting was reported, which inflated the total number of units. These cases were footnoted and explained at the end of this table.

"Cooking facilities" refer to whether the housing unit was equipped with a kitchen or whether some other space was set aside for cooking such as a kitchenette or whether there was not a special space within the unit set aside for cooking. Therefore, the sub-categories refer to units "with kitchen", "with other space for cooking" and "without kitchen or other space for cooking".

A "kitchen" is a room, as room is defined in Technical Notes for Table 16, equipped for the preparation of principal meals and is intended primarily for that purpose. If such a room equipped with basic cooking facilities (e.g. any type of stove, kitchen sink, etc.) is also used for some other purposes (e.g. sleeping, as a workshop, etc) it still should be enumerated as a kitchen.

"Other space reserved for cooking" falls short of the attributes of a "room", although equipped for the preparation of the principal meals and intended primarily for that purpose such as a kitchenette.

"Without kitchen or other space for cooking" is self-explanatory.

Table 19 also displays percentage distribution of housing units by type of lighting and by type of cooking facilities.

Table 20

Table 20 presents data on occupied housing units by type of fuel used for cooking facilities for country and area, urban-rural areas and cities.

A "housing unit" is a separate and independent place of abode intended for habitation by one household or a unit not intended for habitation but actually occupied as a living quarters by a household at the time of the census. Thus it may be an occupied or vacant dwelling, an occupied mobile or improvised housing unit or any other place occupied as living quarters by a household at the time of the enumeration. This category includes housing of various levels of permanency and acceptability and thus requires further classification as presented in details in Technical Notes for Table 7. In general, housing units may be "conventional dwellings" and "unconventional dwellings".

Table 20 presents data on occupied housing units. "Occupancy" refers to whether the dwelling was occupied or vacant at the time of enumeration. In general, a conventional dwelling is considered vacant if indicated by "for rent" or "for sale" signs posted on the dwelling. On the other hand, an unconventional dwelling has to be occupied in order to be enumerated as a housing unit, meaning that there cannot be "vacant unconventional dwellings".

"Fuel used for cooking" refers to the most frequently used fuel in the preparation of principal meals. It may be "electricity", "gas", "coal", "wood" or some other fuel. In general, data displayed in this table refer to the predominant type of fuel used for cooking the principal meals in the unit. If more than one type of fuel was used by occupants only the predominant was enumerated. However, in some cases each type of fuel was reported, which inflated the total number of units. These cases were footnoted and explained at the end of this table.

Table 20 also displays percentage distribution of housing units by type of fuel used for cooking.

Table 21

Table 21 presents data on reported crimes by type of criminal offences and reported crime rates per 1,000 population for country and area, urban-rural areas and cities.

"Criminal offence" is any act defined as such in the national Penal or Criminal code. One of the basic principles of criminal law is that no one can be prosecuted or sentenced for an act which is not defined as a criminal offence in the law (*nulla poena, nullum crimen sine lege*). For that reason this category refers to exact and strict definition in the national law.

"Life and limb" refers to criminal offences against life and limb, such as murders, non-negligent manslaughters, body injuries, etc. "Criminal offences against sexual integrity" refer to sexual offences, such as rapes, attempted rapes, forcible rapes, sexual abuses of all kinds, etc. "Property" refers to all criminal offences against property, disregarding if the victim is an individual, household or institution, and this category comprises burglaries, larceny-thefts, motor-vehicle thefts, shop-lifting, pick-pocketing, petty larcenies, etc. "Economic refers" to criminal offences against country's economic establishment, such as bribes, forgeries, frauds, "white collar crimes", etc. "Public traffic" refers to criminal offences against the public traffic, e.g., imperilment of the public traffic with aggravated consequences, etc. "Drugs related" refers to all drug-related criminal offences, e.g., proliferation of narcotics, enabling and stimulating consumption of drugs, etc. The category "Other" refers to all other criminal offences not stated above.

"Reported crimes "refer to all criminal offences reported to the police or any other competent authority, disregarding who reported that crime has occurred.

"Crime rate" refers to the number of reported crimes per 1,000 population, and is obtained by dividing the total number of crimes by the total number of population expressed in thousands.

Table 22

Table 22 presents data on sentenced perpetrators of criminal offences by type of criminal offences for country and area, urban-rural areas and cities.

"Criminal offence" is any act defined as such in the national Penal or Criminal code. One of the basic principles of criminal law is that no one can be prosecuted or sentenced for an act which is not defined as a criminal offence in the law (*nulla poena, nullum crimen sine lege*). For that reason this category refers to exact and strict definition in the national law.

"Life and limb" refers to criminal offences against life and limb, such as murders, non-negligent manslaughters, body injuries, etc. "Criminal offences against sexual integrity" refer to sexual offences, such as rapes, attempted rapes, forcible rapes, sexual abuses of all kinds, etc. "Property" refers to all criminal offences against property, disregarding if the victim is an individual, household or institution, and this category comprises burglaries, larceny-thefts, motor-vehicle thefts, shop-lifting, pick-pocketing, petty larcenies, etc. "Economic refers" to criminal offences against country's economic establishment, such as bribes, forgeries, frauds, "white collar crimes", etc. "Public traffic" refers to criminal offences against the public traffic, e.g., imperilment of the public traffic with aggravated consequences, etc. "Drugs related" refers to all drug-related criminal offences, e.g., proliferation of narcotics, enabling and stimulating consumption of drugs, etc. The category "Other" refers to all other criminal offences not stated above.

"Sentenced perpetrators of criminal offences" refer to all persons who were prosecuted and found guilty for criminal offence, disregarding the type of punishment imposed (prison, fine, capital punishment, etc).

"Juveniles", in general, refer to sentenced perpetrators of criminal offences under 18 years. However, if the national definition differed, it was so footnoted at the end of this table. "Adults" in general, refer to sentenced perpetrators of criminal offences of 18 years and above.

Table 23

Table 23 presents data on the number of road vehicles for cities.

"Road vehicles" refer to vehicles whose characteristics meet traffic regulations for using roads. A "passenger car" is a road motor vehicle, intended for the transport of passengers and seating not more than nine persons (including the driver). A "bus" is a passenger road vehicle, seating more than nine persons (including the driver). This category includes trolleybus, i.e. bus connected to electric conductors and is not rail-borne and tramcars, i.e. a bus connected to electric conductors and is rail-borne. A "motorcycle" is a two-wheeled road motor vehicle, with or without side-car, or a three-wheeled road motor vehicle which is fitted with an internal combustion engine having a cylinder capacity not exceeding 50 cm^3. "Good's vehicles and others" refers to trucks and other road motor vehicles intended for transportation of goods as well as other road motor vehicles not listed above (i.e., trucks for special purposes, agricultural vehicles, etc.).

Table 24

Table 24 presents data on the number of hospital establishments and physicians and rate per 1,000 population and crude birth rate, crude death rate and infant mortality rate for cities.

"Hospital establishments" refers to all types of establishments (hospitals, clinics, etc.) intended to provide medical help and treatment of humans.

"Physicians" refers to all graduates of medical faculty, including dentists, but excluding veterinarians, who actually work in any medical field (practice, teaching, research, etc.).

"Rate of hospital establishments per 1,000 population" refers to the number of such establishments per every 1,000 population. The rate is obtained by dividing the number of hospital establishments by the total number of population in the city or urban agglomeration expressed in thousands.

"Rate of physicians per 1,000 population" refers to the number of physicians per every 1,000 population. This rate is obtained by dividing the number of physicians by the number of total population in the city or urban agglomeration expressed in thousands.

"Crude birth rate" refers to the total number of live-births per 1,000 mid-year population of the specific year. Live birth is the complete expulsion or extraction from its mother a product of conception, irrespective of the duration of pregnancy, which, after separation breathes or shows any other evidence of life such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached; each product of such a birth is considered live-born regardless of gestational age.

A basic problem affecting international comparability of vital statistics is deviation from standard

definitions of vital events. An example of this can be seen in the case of live births and foetal deaths. In some countries or areas, an infant must survive for at least 24 hours before it can be inscribed in the life-birth register. Infants who die before the expiration of the 24-hour period are classified as late foetal deaths and, barring special tabulation procedures, they would not be counted either as live births or deaths. Similarly, in several other countries or areas, those infants who are born alive but who die before registration of their birth are also considered as late foetal deaths.

"Crude death rate" refers to the total number of deaths per 1,000 mid-year population of the specific year. Death is the permanent disappearance of all evidence of life at any time after live birth has taken place (postnatal cessation of vital functions without capability of resuscitation). This definition therefore excludes foetal deaths.

"Infant mortality rate" refers to the annual number of deaths of infants under one year of age per 1,000 live births in the specific year.

Table 25

Table 25 presents data the number on telephone lines, TV sets/receivers, circulation of daily newspapers, cinemas and public parks and rates per 1,000 population for cities.

"Telephone lines" refers to the total number of telephone lines in the city or urban agglomeration. This category does not necessarily reflect the total number of telephone receivers, since more than one such receiver can be connected to one telephone line. Also, it does not necessarily refer to the total number of user telephone numbers since many establishments may have switchboards connecting several numbers and connected to essentially one telephone line. Whenever the definition of telephone line for a specific city or urban agglomeration was provided, it was displayed in the notes at the end of this table. The "rate of telephone lines per 1,000 population" is obtained by dividing the total number of telephone lines by the total number of population in the city or urban agglomeration expressed in thousands.

"TV set/receiver" refers essentially to an apparatus for receiving and displaying television broadcasts, disregarding whether the broadcast was displayed in monochrome (black and white) or in colors. In some countries and areas all television users are subject to mandatory subscription and in that case this category refers to the number of subscribers to television services and such cases are footnoted at the end of this table. The "rate of TV sets/receivers per 1,000 population" is obtained by dividing the total number of TV sets/receivers by the total number of population in the city or urban agglomeration expressed in thousands.

"Circulation of daily newspapers" refers to the average number of published daily newspapers per day in the city or urban agglomeration. Daily newspaper is a paper published each day of the year (with some exceptions for official holidays) and contains news, articles of opinion, features and advertising. The "rate of daily newspapers per 1,000 population" is obtained by dividing the total number of daily newspapers published daily by the total number of population in the city or urban agglomeration expressed in thousands. However, it has to be noted that in several cities or urban agglomeration this rate took high values since the public that the newspaper is aiming to is not restricted to the city or urban agglomeration where the newspaper has been published.

"Cinemas" refers to fixed cinemas and mobile units whose main purpose is the presentation of movies. A fixed cinema refers to a building (as building is defined in Technical Notes for Table 15) adapted and equipped for presentation of movies, whereas a mobile cinema refers to the equipment for

presentation of movies (screen, movie projector, folding chairs, etc.) that can be transported from one location to other. The "rate of cinemas per 1,000 population" is obtained by dividing the total number of cinemas by the total number of population in the city or urban agglomeration expressed in thousands.

"Public parks" refers to the green-surface areas in the city or urban agglomeration where motor-vehicle traffic is usually forbidden and whose main purpose is recreational. In most cities or urban agglomeration these areas are subject to local regulations and public maintenance.

Table 26

Table 26 presents data on the consumption of water in thousands m^3 and liters per capita per day, consumption of electricity in thousand KWH, total, in households, KWH per day per capita and percentage of household consumption in total consumption and number of schools by type for cities.

"Consumption of water" refers to the total consumption of water in the city or urban agglomeration. The source of data are most usually records of the company providing water to city residents. This consumption of water is expressed in m^3. "Liters per capita per day" refers to an average quantity of water expressed in liters consumed per one inhabitant every day. This rate has been obtained by dividing the total consumption of water in the city or urban agglomeration by the total number of population of the city or urban agglomeration expressed in thousands and further divided by the average number of days in a year (365).

"Total consumption of electricity" refers to the total consumption of electricity in the city or urban agglomeration expressed in thousand KWH. The source of data are most usually records of the company providing electricity to city residents. "Household consumption of electricity" refers to the amount of electricity consumed in households of the city or urban agglomeration expressed in thousand KWH. "KWH per day per capita" refers to the average amount of electricity expressed in KWH consumed by one inhabitant every day. This rate has been obtained by dividing the total consumption of electricity (as defined above) expressed in KWH by the total number of population of the city or urban agglomeration expressed in thousands and further divided by the average number of days in a year (365). Another derived indicator in this table, namely "Percentage of household consumption in the total consumption of electricity" displays the share of household consumption in total consumption of electricity in the city or urban agglomeration.

A "school" is any regular, accredited educational institution, public or private, for systematic instruction at any level of education. "Primary schools" are intended for providing the first level education, and that level usually begins at age five, six or seven and lasts for about five or six years. However, in certain countries or areas the duration may greatly differ from that, e.g. what is called "basic" education, which may last more than six years. "Secondary" schools provide instruction based upon at least four years of previous education or a first level. Such schools may be called high schools, middle schools, lyceums, gymnasiums, etc. and other courses of study whose completion is a minimum condition for admission to university. "Universities and other institutions" are institutions which provide regular education at the third level leading normally to degrees and diplomas. This category includes traditional universities, equivalent degree-training institutions and distant-learning university institutions.

Table 27

Table 27 presents percentage of population residing in urban areas 1980-2025 for country or area.

The source of data for this table is the United Nations Population Division's publication *World Urbanization Prospects - The 1994 Revision* [15] . The method used for projecting city populations is presented in detail in *Patterns of Urban and Rural Population Growth* [16] and also in *Estimates and Projections of Urban, Rural and City Populations, 1950-2025: The 1980 Assessment* [17].

In preparing a global accounting of urban and rural growth, one is beset by problems of data and definition. Unlike mortality and fertility studies, the criteria for identifying the phenomenon under study are not obvious nor are they necessarily constant from country to country. Furthermore, evidence on levels and trends in urbanization does not typically accumulate continuously. Instead, estimates of urban and rural growth must rely heavily on information from widely spaced population censuses.

In this approach, the practice is continued of presenting estimates based on urban areas designated by the country under review (for definition of urban areas of a country or area, see Section (c) of these Technical Notes), rather than imposing a uniform set of criteria . Partial justification for this practice is that national statistical offices are in the best position to distinguish between urban and rural-type areas in their own country. For example, an urban designation typically implies a predominance of non-agricultural activities. Such a criterion may not need to be explicit in developed countries, where large agglomerations will almost certainly be non-agricultural. But in certain developing countries this may not be the case, and an additional explicit criterion of economic activity may have to be introduced. An additional justification is that the size and nature of administrative units, which would necessarily form the building blocks of redefined urban areas, vary considerably from country to country, so that true comparability could never be achieved.

Since much of the interest in urban and rural growth relates to changes in population size over time, it was believed necessary to adjust national figures whenever a change in national urban definition occurred (for historical overview of changes in national definitions of "urban" see Section 2(c) of these Technical Notes). Such an adjustment avoids the erratic dips and peaks in urban and rural growth that may be produced by definitional change. These irregularities become even more troublesome when recent growth trends are projected into the future. Therefore, a strenuous attempt was made to adjust all figures to a comparable definition within a particular country. When possible, earlier data were adjusted to the later definition. Occasionally, it was necessary to use a definition that was never nationally adopted in order to maximize comparability over time.

In order to examine efficiently and concisely the levels and trends in urbanization on a regional or global level, it is necessary to have the various country estimates available at the same point in time. These time points would correspond to the mid years of 1980, 1985 ...2025. But the dates at which countries conduct censuses or make population estimates vary widely. The method for processing the census results into the desired uniform sequence of dates is relatively simple. When a desired date for estimation was bounded by two censuses in a particular country, the nearest census on either side of the estimation date was identified and the calculated intercensal difference between the urban and rural growth rates was assumed to have remained constant during the intercensal period. The urban proportion of the desired date was derived through this assumption. When the desired estimation date was not bounded by two censuses or other concrete estimates, the two nearest observations were identified and the measured intercensal urban-rural growth difference between them was applied

[15] World Urbanization Prospects - The 1994 Revision, United Nations Publication Sales No. E.95.XIII.12, New York, 1995

[16] Patterns of Urban and Rural Population Growth, United Nations Publication No. E.79.XIII.9, New York, 1980

[17] Estimates and Projections of Urban, Rural and City Populations, 1950-2025: The 1980 Assessment, United Nations Publication ST/ESA/SER.R/45, New York, 1982

forward or backward in time as required. One advantage of working with urban-rural growth difference is that it shows considerable stability over a wide range of conditions. A second advantage is that it can be computed directly from the proportions urban that are recorder in two censuses, rather than from absolute numbers. Hence, it is relatively insensitive to changes in the completeness of census enumeration.

The core of the method used to project urban population has been termed the "United Nations method". Basically, this method involves extrapolating into the future the most recently observed urban-rural growth difference. This procedure results in a logistic time path of the proportion urban which has a peak velocity (annual absolute gain in proportion urban) at a proportion 0.5 and has a maximum urban proportion, eventually to be reached by all countries or areas, of 1.000.

It was considered desirable to modify the procedure, since the overwhelmingly important source of difference between urban and rural growth rates is net rural-urban migration. As the urban proportion increases, it therefore becomes more and more difficult to maintain a particular urban-rural growth difference because the pool of potential migrants to urban areas declines as a fraction of the urban population, while the pool of potential migrants to rural areas increases as a fraction of the rural population. Therefore, it is reasonable to expect the urban-rural difference to decline as the urban proportion rises.

Finally, in the procedure described above, both the estimated and the projected proportions urban are applied to United Nations estimates and projections of total national population.

The definitions of urban areas as applied in tables 27, 28, 29 and 30 in some cases differed from those presented in section 2(c) of these Technical Notes. Following are the definitions for countries or areas relevant for population estimates and projections as displayed in the above mentioned tables:

American Samoa: Places with 2,500 or more inhabitants and urbanized areas.
Bahrain: Communes or villages with 2,500 or more inhabitants.
Benin: Localities with 10,000 or more inhabitants.
Cambodia: Municipalities of Phnom Penh, Bokor and Kep, and 13 urban centres.
Cayman Islands: Entire population.
Chad: Ten urban centres.
East Timor: Dili.
Eritrea: Localities with 2,000 or more inhabitants.
Fiji: Places with a population of 1,000 or more.
Italy: Communes with 10,000 or more inhabitants.
Jordan: Localities with 10,000 or more inhabitants and each subdistrict centre irrespective of size of population.
Kiribati: Tarawa.
Kuwait: Agglomerations of 10,000 or more inhabitants.
Lao People's Democratic Republic: Sum of five largest towns: Vientiane, Luang Prabang, Savannakhet, Kammouan and Pakse.
Lesotho: The district headquarters and other settlements of rapid population growth with facilities that tend to encourage people to engage in more activities that are non-agricultural in nature, as nuclei.
Marshall Islands: The entire population of Majuro atoll and Ebeye on Kwajalein atoll.
Micronesia (Federated State of): Localities with 1,000 or more inhabitants.
Monaco: City of Monaco.
Mozambique: Conselho of Maputo and Beira.
Nauru: Nauru.

Netherlands Antilles: Population of urban agglomeration of Willemstad and Philipsburg and Kralendijk.
Niger: Urban centres (27 towns).
Nigeria: Towns with 20,000 or more inhabitants whose occupations are not mainly agrarian.
Niue: Alofi.
Northern Mariana Islands: Places with a population of 1,000 or more.
Oman: Two main towns, Muscat and Matrah.
Palau: Koror.
Pitcairn: No urban population.
Qatar: Not available.
St. Pierre and Miquelon: St. Pierre.
Sao Tome and Principe: São Tomé and Pantufo.
Saudi Arabia: Cities with 5,000 or more inhabitants.
Sierra Leone: Towns with 2,000 or more inhabitants.
Singapore: City of Singapore.
Slovakia: Large towns, usually with 5,000 or more inhabitants, having a density of more than 100 persons per hectare of built-up area, three or more living-quarters in at least 15 per cent of the houses, piped water and a sewerage system in the major part of the town, at least five physicians and a pharmacy, a nine-year secondary school, a hotel of at least 20 beds, a network of trade and distributive services which serve more than one town, job opportunities for the population of the surrounding area, the terminal for a omnibus system and not more than 10 per cent of the total population active in agriculture; small towns usually with 2,000 or more inhabitants, having a density of more than 75 persons per hectare of built-up area, three or more living-quarters in at least 10 per cent of the houses, piped water and a sewerage system for a least part of the town at least two physicians and a pharmacy, other urban characteristics to a lesser degree and not more than 15 per cent of the total population active in agriculture; and agglomerated communities having the characteristics of small towns in regard to size, population density, housing, water-supply and sewerage, and the percentage of the population active in agriculture, but lacking such town characteristics as educational facilities, cultural institutions, health services and trade and distributive services, because those facilities and services are supplied by a town in the vicinity.
Somalia: Towns with 5,000 or more inhabitants.
Spain: Municipalities with 10,000 or more inhabitants.
Turks and Caicos Islands: Grand Turk.
Tuvalu: Funafuti.

Table 28

Table 28 presents urban population, number of urban agglomerations and percentage of urban population by the size of urban agglomeration by major area and region, 1980 - 2015.

The source of data for this table is United Nations Population Division's publication *World Urbanization Prospects - The 1994 Revision* [18]. The method used for projecting city populations is presented in detail in *Patterns of Urban and Rural Population Growth* [19] and also in *Estimates and Projections of Urban, Rural and City Populations, 1950-2025: The 1980 Assessment* [20].

[18] World Urbanization Prospects - The 1994 Revision, United Nations Publication Sales No. E.95.XIII.12, New York, 1995
[19] Patterns of Urban and Rural Population Growth, United Nations Publication No. E.79.XIII.9, New York, 1980
[20] Estimates and Projections of Urban, Rural and City Populations, 1950-2025: The 1980 Assessment, United Nations Publication ST/ESA/SER.R/45, New York, 1982

The projections of the proportion of urban population residing in urban agglomerations by the size of the agglomeration must be interpreted with great caution. As data in this table indicate, the number of cities in a particular size category changes from one projection period to the next; this is due to the fact that if cities grow sufficiently, they can leave one size category and enter a larger one. Thus, these data do not refer directly to the growth of population in cities but rather to population growth in size classes. This means that during periods of national population growth and urbanization, the largest size class expands not only from population growth in cities that were previously allocated to that class, but also from cities newly entering the class. The situation in the other categories is even more confounded because in addition to cities that have graduated into a particular class, other cities simultaneously leave the size class. The population in the smaller size classes are not projected far into the future, for there is no way that decisions can be made on a global level as to which cities might reach 100,000 population during the projection period. This lack of information not only affects the smallest size class, but also has implications for the next larger classes, because, in the long haul, the graduation of cities in the smallest category becomes one of the sources of growth in the categories immediately following the smallest one. Long-term projections therefore would seriously underestimate population growth in these categories.

The designations "more developed" and "less developed" regions used in this table are intended for statistical convenience and do not necessarily express a judgement about the stage reached by a particular country or area in the development process.

The 48 "least developed countries, classified as such by the United Nations General Assembly in December 1994, are: Afghanistan, Angola, Bangladesh, Benin, Bhutan, Burkina Faso, Burundi, Cambodia, Cape Verde, Central African Republic, Chad, Comoros, Djibouti, Equatorial Guinea, Eritrea, Ethiopia, Gambia, Guinea, Guinea-Bissau, Haiti, Kiribati, Lao People's Democratic Republic, Lesotho, Liberia, Madagascar, Malawi, Maldives, Mali, Mauritania, Mozambique, Myanmar, Nepal, Niger, Rwanda, Samoa, Sao Tome and Principe, Sierra Leone, Solomon Islands, Somalia, Sudan, Togo, Tuvalu, Uganda, United Republic of Tanzania, Vanuatu, Yemen, Zaire and Zambia. However, Angola and Eritrea, which were newly classified as least developed in December 1994, are not counted as such in this report because all statistical processing was completed prior to that date. Botswana, which has been so classified prior to December 1994, is included in the group covered by this table.

Table 29

Table 29 presents data on population (in thousands) of urban agglomerations comprising 750,000 or more inhabitants in 1990 for country or area, 1980-2015.

The source of data for this table is the United Nations Population Division's publication *World Urbanization Prospects - The 1994 Revision*[21] . The method used for projecting city populations is presented in detail in *Patterns of Urban and Rural Population Growth*[22] and also in *Estimates and Projections of Urban, Rural and City Populations, 1950-2025: The 1980 Assessment* [23].

For more details on estimates and projections of population in urban agglomerations and the distribution of urban agglomerations by size see Technical Notes for Table 11 and Table 28.

Table 30

Table 30 presents the percentage of total population residing in urban agglomerations with 750,000 or more inhabitants in 1990 for country or area, 1980-2015.

The source of data for this table is the United Nations Population Division's publication *World Urbanization Prospects - The 1994 Revision*[24] . The method used for projecting city populations is presented in detail in *Patterns of Urban and Rural Population Growth*[25] and also in *Estimates and Projections of Urban, Rural and City Populations, 1950-2025: The 1980 Assessment* [26].

For more details on estimates and projections of population in urban agglomerations and the distribution of urban agglomerations by size see Technical Notes for Table 11 and Table 28.

C. NOTES ON THE FIGURES

The present *Compendium* presents 30 figures consisting of graphical presentation of statistical data. Each of these figures precedes each of 30 statistical tables. The purpose of these figures is to present numerical information in a more comprehensive, graphical form.

In general, each figure consists of 6 graphs displaying data for one country/area or city/urban agglomeration in one of the six continents. The criteria for selecting the country/area or city/urban agglomeration were, as a rule, (a) the largest number of units for a specific topic, and (b) the most complete information available. The first criterion refers to the country/area or city/urban agglomeration that had the highest occurrence for a specific topic (e.g. the largest number of inhabitants, the largest number of housing units and so forth). The second refers to the completeness of information, that is, if for the country or area with the largest number of units data on all the categories for a specific topic were not available, than the next country or area was selected and so forth.

As mentioned above, the majority of figures consist of six graphs, although, depending of the specific topic, the design of the figure was altered in order to provide better overview of the specific topic. In addition, specific notes and explanations are appended to each of the figures.

GENERAL NOTES

Unless otherwise indicated, figures refer to de facto (present-in-area) population for present territory; surface area estimates include inland waters. For method of evaluation and limitation of data, see Technical Notes.

The date of the census is displayed in following format: dd/mm/yy.

All figures with "x" are provisional data or estimates prepared by the Population Division of the United Nations.

NOTES

* Unofficial figures.

1 Population per square kilometre of surface area in 1992. Figures are merely the quotients of population divided by surface area and are not to be considered either as reflecting density in the urban sense or as indicating the supporting power of a territory's land and resources.

2 For explanation of code, please see Technical Notes.

3 De jure population.

4 Including the enclave of Cabinda.

5 Comprising Chagos Archipelago (formerly dependency of Mauritius).

6 Census of Chago Archipelago taken 30 June 1960 gave total population of 747 persons.

7 Estimate for de jure African population based on results of a sample survey covering 5 per cent of the population in 549 rural villages and 10 per cent of the population in 10 urban communes and a complete enumeration of the population of Fort-Archambault, Doba, Moundou, Koumra, Bongor and Abeche. Including estimates of 100,000 for Fort-Lamy enumerated in 1962, and 630, 000 for other areas not covered by the survey.

8 Including an estimated figure of 50,740 for the island of Mayotte, not covered by the census.

9 Estimate not in accord with the latest census and/or the latest estimate.

10 Rate not computed because of apparent lack of comparability between estimates shown for 1985 and 1992.

11 Comprising Bioko (which includes Pagalu) and Rio Muni (which includes Corisco and Elobeys).

12 Mid-year estimates have been adjusted for under-enumeration, estimated as follows:

	Percentage adjustment	Adjusted census total
Australia	1.8	...
Bangladesh	3.1	89 949 000
Brunei Darussalam	1.06	...
Guatemala	13.7	...
Guinea	...	...
Korea, Republic of	1.9	...
Mozambique	3.8	...
Netherlands Antilles	2.0	...
Peru	...	...
Saint Lucia	7.24	...
Sierra Leone	10.0	3 002 426
Uruguay	2.6	...

13 Including an estimate of 224,095 for nomad population.

14 Comprising the islands of Agalega and St. Brandon.

15 Excluding Bophuthatswana, Ciskei, Transkei and Venda.

16 Comprising the Northern Region (former Saguia el Hamra and Southern Region (former Rio de Oro).

17 De jure population, but excluding persons residing in institutions.

18 Including Carriacou and other dependencies in the Grenadines.

19 Including dependencies: Marie-Galante, la Désirade, les Saintes, Petite-Terre, St. Barthélemy and French part of St. Martin.

20 Comprising Bonaire, Curaçao, Saba, St. Eustatius and Dutch part of St. Martin.

21 Including armed forces in the area.

22 Including Bequia and other islands in the Grenadines.

23 De jure population, but excluding civilian citizens absent from country for extended period of time. Census figures also exclude armed forces overseas.

24 Excluding Indian jungle population.

25 Mid-year estimates for 24 October.

26 Excluding nomadic Indian tribes.

27 Excluding dependencies, of which South Georgia (area 3,755 km²) had an estimated population of 499 in 1964 (494 males, 5 females). The other dependencies namely, the South Sandwich group (surface area 337 km²) and a number of smaller islands, are presumed to be uninhabited.

28 A dispute exists between the governments of Argentina and United Kingdom of Great Britain and Northern Ireland concerning sovereignty over the Falkland Islands (Malvinas).

29 Excluding nomad population.

30 Excluding transients afloat.

31 Excluding foreign diplomatic personnel and their dependants.

32 This total population of China, as given in the communiqué of the State Statistical Bureau releasing the major figures of the census, includes a population of 6,130,000 for Hong Kong and Macau.

33 Comprising Hong Kong island, Kowloon and the New (leased) Territories.

34 Land area only. Total including ocean area within administrative boundaries is 2,916 km².

35 Including data for the Indian-held part of Jammu and Kashmir, the final status of which has not yet been determined.

36 Figures provided by Indonesia including East Timor, shown separately.

37 Including data for East Jerusalem and Israeli residents in certain other territories under occupation by Israeli military forces since June 1967.

38 Comprising Hokkaido, Honshu, Shikoku, Kyushu. Ecluding diplomatic personnel outside the country and foreign military and civilian personnel and their dependants stationed in the area.

39 Including military and diplomatic personnel and their families abroad, numbering 933 at 1961 census, but excluding military and diplomatic personnel and their families in the country, numbering 389 at 1961 census. Also including registered Palestinian refugees number 654,092 and 722,687 at 30 June 1963 and 31 May 1967, respectively.

40 Excluding data for Jordanian territory under occupation since June 1967 by Israeli military forces.

41 Excluding alien armed forces, civilian aliens employed by armed forces, foreign diplomatic personnel and their dependants and Korean diplomatic personnel and their dependants outside the country.

42 Excluding Palestinian refugees in camps.

43 Based on results of sample survey.

44 Comprising Macau City and islands of Taipa and Coloane.

45 Excluding data for Jammu and Kashmir, the final status of which has not yet been determined, Jungaradh, Manavadar, Gilgit and Baltistan.

46 Former mandated territory administered by United Kingdom until 1948.

47 Excluding United Kingdom armed forces, numbering 2,507.

48 Comprising that part of Palestine under Egyptian administration following the Armistice of 1949 until June 1967, when it was occupied by Israeli military forces.

49 Excluding transients afloat and non-locally domiciled military and civilian services personnel and their dependants and visitors, numbering 5,553; 5,187 and 8,895 respectively at 1980 census.

50 Including Palestinian refugees numbering 193,000 on 1 July 1977.

51 Comprising 7 sheikdoms of Abu Dhabi, Dubai, Sharjah, Ajaman, Umm al Qaiwain, Ras Khaimah and Fujairah, and the area lying within the modified Riyadh line as announced in October 1955.

52 Excluding surface area of frontier rivers.

53 Including dependencies: Alderey, Brechou, Herm, Jethou, Lithou and Sark Island.

54 Excluding Faeroe Islands and Greenland.

55 Excluding Overseas Departments, namely French Guiana, Guadeloupe, Martinique and Réunion, shown separately.

56 De jure population, but excluding diplomatic personnel outside the country and including foreign diplomatic personnel not living in embassies or consulates.

57 Excluding military personnel stationed outside the country who do not have a personal residence in France.

58 All data shown pertaining to Germany prior to 3 October 1990 are indicated separately for the Federal Republic of Germany and the former German Democratic Republic based on their respective territories at the time indicated.

59 Excluding armed forces.

60 Including armed forces stationed outside the country, but excluding alien armed forces stationed in the area.

61 Including armed forces stationed outside the country, but including alien armed forces stationed in the area.

62 Surface area is 0.44 km².

63 Including Gozo and Comino Islands and civilian nationals temporarily outside the country.

64 Surface area is 1.49 km².

65 Excluding civilian aliens within the country, but including civilian nationals temporarily outside the country.

66 Including the Azores and Madeira Islands.

67 Including the Balearic and Canary Islands, and Alhucemas, Ceuta, Chafarinas, Melilla and Penon de Vélez de la Gomera.

68 Inhabited only during the winter season. Census data are for total population while estimates refer to Norwegian population only. Included also in de jure population of Norway.

69 Excluding Channel Islands and Isle of Man, shown separately.

70 Excluding Niue, shown separately, which is part of Cook Islands, but because of remoteness is administered separately.

71 Comprising Austral, Gambier, Marquesas, Rapa, Society and Tuamotu

Islands.

72 Including Christmas, Fanning, Ocean and Washington Islands.

73 Including the islands Huon, Chestrefield, Loyalty, Walpole and Belep Archipelago.

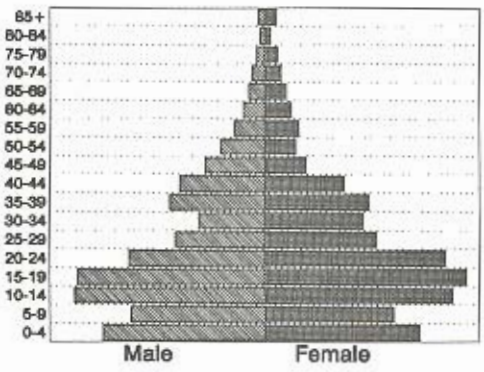

74 Including Campbell and Kermadec Islands (population 20 in 1961, surface area 148 km^2) as well as Antipodes, Auckland, Bounty, Snares, Solander and Three Kings island, all of which are uninhabited. Excluding diplomatic personnel and armed forces outside the country, the latter numbering 1,936 at 1966 census; also excluding alien armed forces within the country.

75 Comprising eastern part of New Guinea, the Bismarck Archipelago, Bougainville and Buka of Solomon Islands group and about 600 smaller islands.

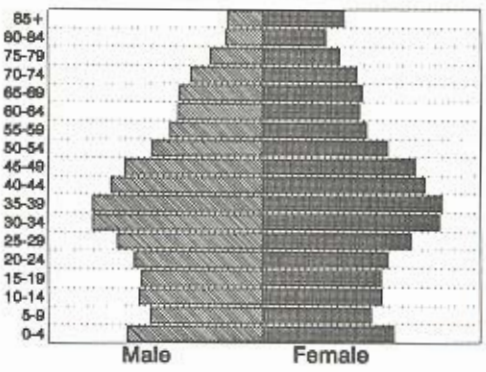

76 Comprising the Solomon islands group (except Bougainville and Buka which are included with Papua New Guinea shown separately), Ontong, Java, Rennel and Santa Cruz Islands.

Figure 2. Population by sex and age

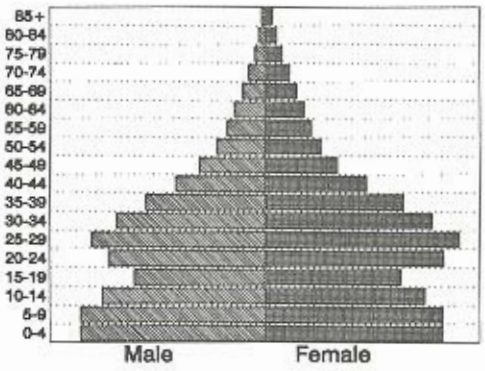

Addis Ababa, 1984

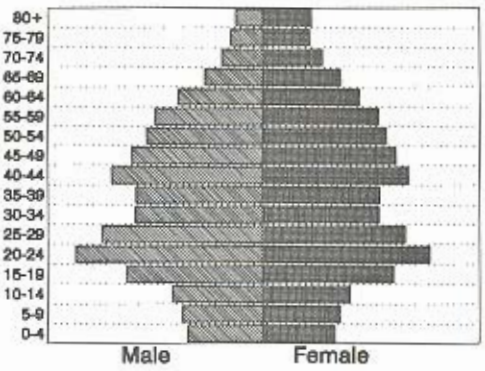

New York, 1990

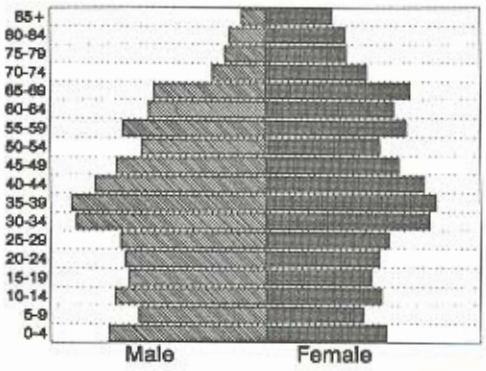

Bogota, 1985

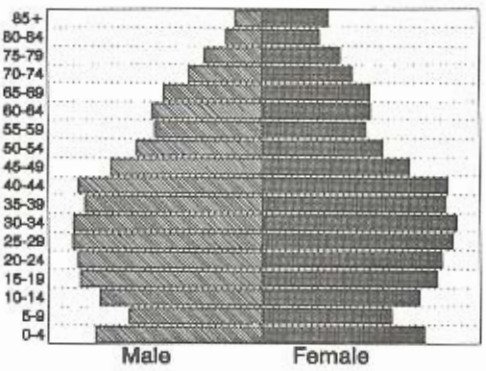

Tokyo, 1990

Moscow, 1989

Sydney, 1986

Age pyramids for the most populous city in each region are presented from data shown in Table 2.

2. Population by age and sex: country or area, urban-rural areas, cities

(See notes at end of table.)

NOTES

1 Provisional data.

2 Data have been adjusted for underenumeration at latest census.

3 Data refer to urban agglomeration (includes Teshie & Nungua)

ACCRA CITY

AGE GROUP	TOTAL	MALE	FEMALE
ALL AGES	867459	423814	443645
Under 1 Year	24180	12224	11956
1-4	110673	55611	55062
5-9	135753	66567	69186
10-14	120378	56305	64073
15-24	203096	93192	109904
25-44	264327	130934	133393
45-64	88590	49466	39124
65 +	22198	9932	12266

4 Data refer to urban agglomeration (includes Old Tafo and New Tafo).

5 Data refer to urban agglomeration (includes Effiakuma).

6 De jure population.

7 Data are displayed as received by the UN. However, the sum of categories differs from the total.

8 Excluding Bophuthatswana, Ciskei, Transkei and Venda. Data have not been adjusted for underenumeration.

9 Because of rounding, totals are not in all cases the sum of parts.

10 Age classification based on year of birth rather than on completed years of age.

11 Data refer to 16 Political Delegations from the Federal District and 27 town municipalities from the State of Mexico.

12 Data refer to the City of Guadalajara and 3 town municipalities of Jalisco.

13 Data refer to the City of Monterrey and to 8 municipalities of Nuevo Leon.

14 Data refer to the whole territory and to Belongers (citizens of Turks and Caicos Islands) only.

15 De jure population, but excluding civilian citizens absent from country for extended period of time.

16 Excluding armed forces overseas.

17 Data refer to the City Metropolitan Statistical Area (MSA).

18 Including armed forces stationed in the area.

19 Excluding Indian jungle population.

20 Projections provided by "Departamento Administrativo Nacional de Estadistica (DANE)".

21 Excluding nomadic Indian tribes.

22 Excluding nomads.

23 Covering only the civilian population of 30 provinces, municipalities and autonomous regions. Excluding Jinmen and Mazhu Islands.

24 Data refer to Government controlled area only.

25 Including 26,106 transients and 9,131 Vietnamese refugees.

26 Including data for the Indian-held part of Jammu and Kashmir, the final status of which has not yet been determined.

27 Data corrected by UN.

28 Including data for East Jerusalem and Israeli residents in certain other territories under occupation by Israeli military forces since June 1967.

29 Including East Jerusalem.

30 Excluding diplomatic personnel outside the country, and foreign military and civilian personnel and their dependants stationed in the area.

31 Excluding allien armed forces, civilian alliens employed by armed forces, and foreign diplomatic personnel and their dependants and Korean diplomatic personnel and their dependants stationed outside the country.

32 Excluding 1,183,005 persons from areas restricted by security reasons.

33 Excluding Jammu and Kashmir, the final status of which had not yet been determined. Also excluded are Junagardh, Manavadar, Gilgit and Baltistan.

34 Including Palestinian refugees.

35 Totals slightly differ from the sum of categories because of rounding.

36 Data refer to commune of Plovdiv.

37 De jure population but excluding diplomatic personnel outside the country and including foreign diplomatic personnel not living in embassies or consulates.

38 All data shown pertaining to Germany prior to 3 October 1990 are indicated separately for the Federal Republic of Germany and the former German Democratic Republic based on their respective territories at the time indicated. See explanatory notes on data pertaining to Germany in Technical Notes.

39 Excluding persons on the Central Register of Population (containing persons belonging to the Netherlands population but having no fixed municipality of residence).

40 Excluding civilian aliens within the country, and including civilian nationals temporarily outside the country.

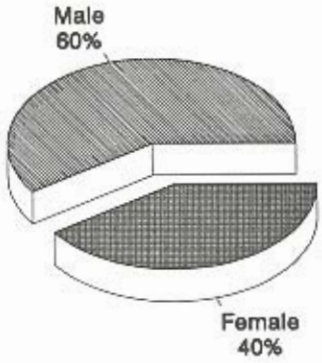

41 Based on a 3 per cent samples of census returns.

42 Excluding diplomatic personnel and armed forces stationed outside the country, the latter numbering 1,936 at 1966 census; also excluding alien armed forces within the country.

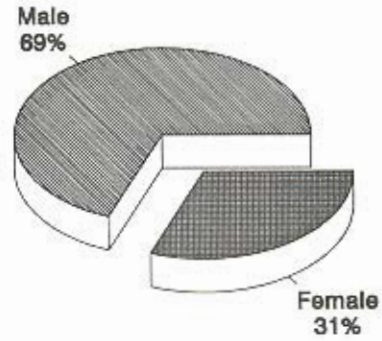

43 For indigenous population only.

Figure 3. Economically active population by sex

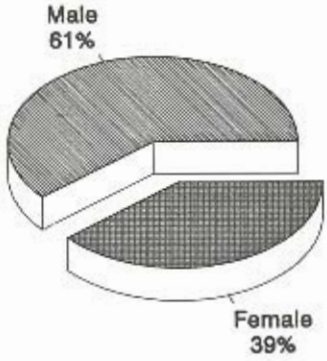

Cape Town, 1985

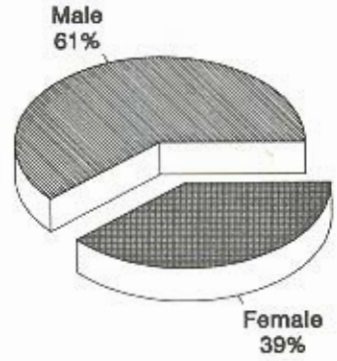

Ciudad de Mexico, 1990

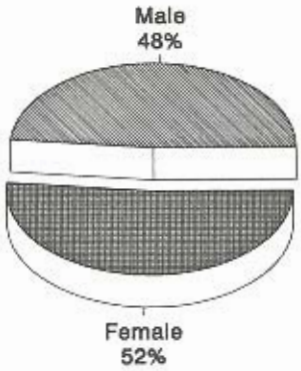

Lima, 1991

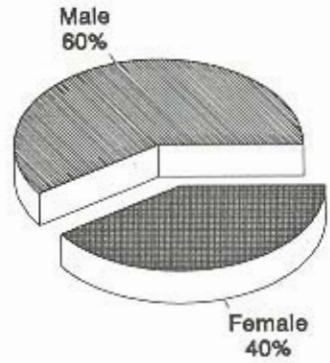

Tokyo, 1985

Moscow, 1989

Sydney, 1986

Information for the city with the highest number of economically active population by region is presented from data shown in Table 3.

3. Economically active population by sex and industry: country or area, urban-rural areas, cities

(See notes at end of table.)

	Economically active population

GENERAL NOTES

Economically active may be limited to persons above a minimum age. The following notes apply for a specific situation:

[a] Data refer to the population aged 10+.
[b] Data refer to the total population (all ages).
[c] Data refer to the population aged 6+.
[d] Data refer to the population aged 12+.
[e] Data refer to the population aged 15+.
[f] Data refer to the population aged 8+.
[g] Data refer to the population aged 11+.
[h] Data refer to the population aged 16+.

NOTES

1 De jure population.

2 Data refer to Egyptian nationals only.

3 Because of rounding, totals are not in all cases the sum of the parts.

4 Data are displayed as received by the UN. However, the sum of categories differs from the total.

5 Excluding Bophuthatswana, Ciskei, Transkei and Venda. Data have not been adjusted for underenumeration.

6 Data refer to both mining and energy.

7 The sum of categories differs from the total because of rounding.

8 Estimates too small to be reliable.

9 Data exclude adjustment for underenumeration, estimated at 13.7 per cent.

10 Data refer to employed population only.

11 Gas industry is listed under the category "Mining and Quarrying".

12 Data refer to financing, insurance and real estate agencies only.

13 Public Administration, Defense, Community, Social, Professional, Technical, Personnel and Maintenance Services.

14 Data refer to the whole territory and to Belonger population (citizens of Turks and Caicos islands) only.

15 Excluding nomadic Indian tribes.

16 Category "not classifiable" includes newly employed workers.

17 Data exclude adjustment for underenumeration, estimated at 4.1 per cent. Also excluded is Indian jungle population.

18 Figures refer to the working population aged 15 years and over. (i.e. excluding the unemployed from the economically active population)

19 Covering only the civilian population of 29 provinces, municipalities and autonomous regions.

20 Data refer to the Government controlled area only and to persons working in the city, not to the residents of the city.

21 Data refer to the working population.

22 Including data for the Indian-held part of Jammu and Kashmir, the final status of which has not yet been determined.

23 Including financing, insurance, real estate and business services.

24 Based on results of sample survey.

25 Including data for East Jerusalem and Israeli residents in certain other territories under occupation by Israeli military forces since June 1967. Data exclude adjustment for underenumeration, estimated at 1.5 per cent.

26 Including East Jerusalem.

27 Exclude diplomat personnel outside country and foreign military and civilian personnel and their dependants stationed in the area.

28 Excluding alien armed forces, civilian aliens employed by armed forces, foreign diplomatic personnel and their dependants and Korean diplomatic personnel and their dependants outside the country.

29 Totals slightly differ from the sum of categories because of rounding.

30 Excluding 1,183,005 persons from areas restricted by security reasons.

31 Excluding data for Jammu and Kashmir, the final status of which has not yet been determined, Junagardh, Manadavar, Gilgit and Baltistan.

32 Excluding transients afloat and non-locally domiciled military and civilian services personnel and their dependants and visitors.

33 Data refer to employed persons aged 15 years and over residing in Singapore.
Figures refer to preliminary data grossed up from the 10% sample data and may not add up due to rounding.
Singapore is a city state.

34 Data exclude adjustment for underenumeration, estimated at 3.2 per cent.

35 Data refer to the following three categories:
- Mining and quarrying,
- Manufacturing,
- Electricity, gas and water.

36 Data refer to commune of Plovdiv.

37 De jure population, but excluding diplomatic personnel outside the country and including foreign diplomatic personnel not living in embassies or consulates.

38 Data refer to unemployed and military contingent.

39 Excluding families of military personnel, visitors and transients.

40 Data refer to the following three categories:
- Finance, insurance, real estates and business services,
- Community, social and personal services,
- Category not classifiable.

41 All data refer to persons at work only.

42 Included mining, electricity, gas, construction, transport, storage, and communication.

43 Included community, social and personal services.

44 Data refer to: Agriculture, hunting, forestry and fishing, Mining and quarrying, Manufacturing, Electricity, gas and water, Construction and Recycling iron and steel, and photographic and cinematographic laboratories.

45 Data refer to: Wholesale/retail trades, restaurants and hotels, Transport, Storage and Communication, and Dispensing Chemist and repair of consumer goods.

46 Data refer to: Financing, insurance, real estates and business services, Community, Social and personal services, and Renting of motorcars and renting of consumer goods.

47 Excluding civilian aliens within country, and including civilian nationals temporarily outside country.

48 Data include economically active population in mining and quarrying, manufacturing, electricity, gas and water and sea-fishing, but exclude water-works and sewage system.

49 Excluding hotels.

50 Excluding urban transport.

51 Data include financing, insurance, real estate, business services, community, social and personal services, hotels, urban transport, water-works and sewage system.

52 Included are data for storage.

53 Excluding storage.

54 Data refer to broader urban area and also to active population working on the territory of communes being a part of these cities independently of its place of residence.

55 Including armed forces stationed in the area.

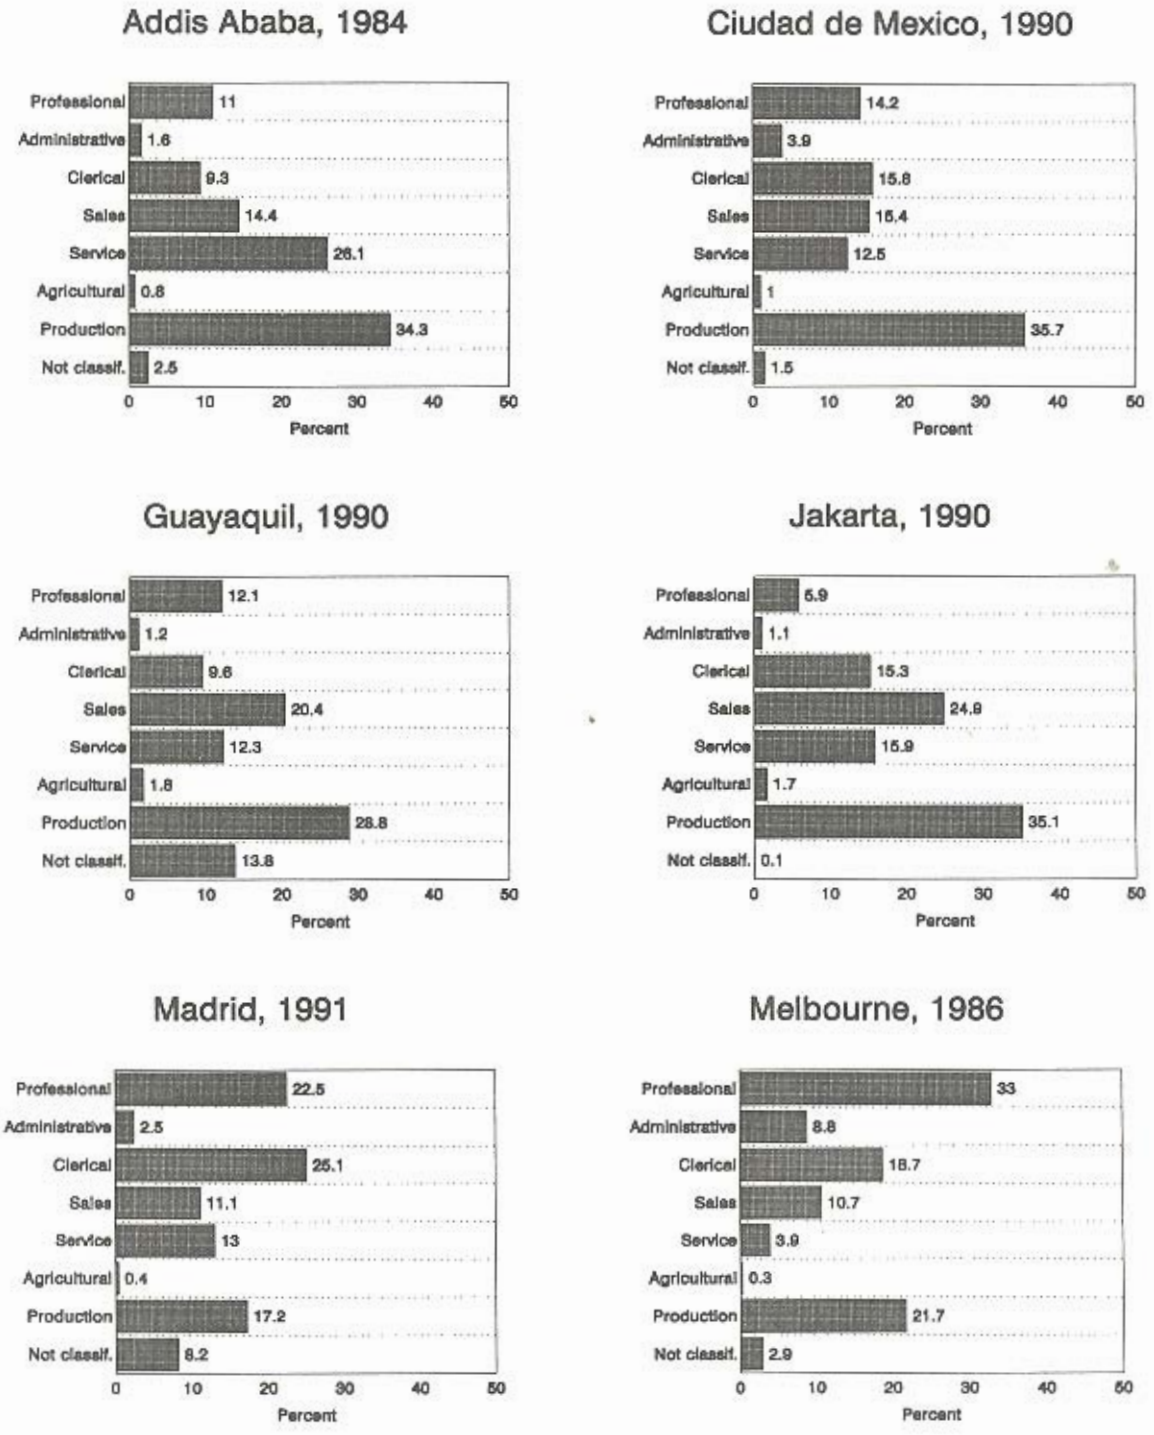

56 Data refer to the whole American Samoa.

57 Excluding diplomatic personnel and armed forces stationed outside the country, the latter numbering 1,936 at 1966 census; also excluding alien armed forces within the country.

58 Included are all unemployed persons and gainfully employed persons who did not specify an industry.

59 All figures have been randomly rounded to base 3.

Figure 4. Economically active population by occupation

Information for the city with the highest or second highest number of economically active population by region is presented from data shown in Table 4.

4. Economically active population by sex and occupation: country or area, urban-rural areas, cities

(See notes at end of table.)

	Economically active population

GENERAL NOTES

See Table 3.

NOTES

1 Because of rounding, totals are not in all cases the sum of the parts.

2 Excluding Bophuthatswana, Ciskei, Transkei and Venda. Also, data have not been adjusted for underenumeration.

3 Data are displayed as received by the UN. However, the sum of categories differs from the total.

4 Clerical and related workers, including Sales workers.

5 Data refer to the whole island.

6 De jure population.

7 Totals differ slightly from the sum of categories because of rounding.

8 Estimates too small to be reliable.

9 Data refer to both employed population and people who are unemployed and looking for work.

10 Data refer to employed population only.

11 Data refer to the whole territory and to Belonger (citizens of Turks and Caicos Islands) population only.

12 Excluding armed forces overseas and civilian citizens absent from country for an extended period of time.

13 Excluding nomadic Indian tribes.

14 Category "not classifiable" includes newly employed workers.

15 Data exclude adjustment for underenumeration, estimated at 6.99 per cent. Also excluded is Indian jungle population.

16 The figures refer to the working population aged 15 years and over. (i.e. excluding the unemployed from the economically active population).

17 Data refer to both Sales workers and Service workers.

18 Data refer to the working population.

19 Data refer to professionals and associate professionals.

20 Included are both service and shop sales workers.

21 Data refer to craft and related workers.

22 Data include the two following categories:

	Total	Male	Female
Elementary occupations	503832	280434	130897
Armed forces and occupations not classifiable	7541	7069	472

23 Including data for the Indian-held part of Jammu and Kashmir, the final status of which has not yet been determined. All figures are based on a 5 per cent sample of census returns.

24 Data refer to main workers, excluding unemployed persons.

25 Based on results of sample survey.

26 Including data for East Jerusalem and Israeli residents in certain other territories under occupation by Israeli military forces since June 1967. Data exclude adjustment for underenumeration, estimated at 1.5 per cent.

27 Including East Jerusalem.

28 Excluding diplomatic personnel outside country and foreign military and civilian personnel and their dependants stationed in the area.

29 Excluding alien armed forces, civilian aliens employed by armed forces, foreign diplomatic personnel and their dependants and Korean diplomatic personnel and their dependants outside the country.

30 Excluding 1,183,005 persons from areas restricted by security reasons.

31 Excluding data for Jammu and Kashmir, the final status of which has not yet been determined, Junagardh, Manavadar, Gilgit and Baltistan.

32 Excluding transients afloat and non-locally domiciled military and civilian services personnel and their dependants and visitors.

33 Data for Administrative and managerial workers include clerical and related workers.

34 De jure population, but excluding diplomatic personnel outside the country and including foreign diplomatic personnel not living in embassies or consulates.

35 Data refer to unemployed and military contingent.

36 Excluding families of military personnel, visitors and transients.

37 Data refer to the following three categories:
- Production and related workers, transport equipment operators
- Labourers
- Not classifiable

38 Data refer to all persons at work, unemployed (other than first jobseekers) and retired.

39 The category "Sales workers" refers to commerce, insurance and finance workers.

40 Excluding civilian aliens within country, and including civilian nationals temporarily outside country.

41 Data refer to both sales and service workers.

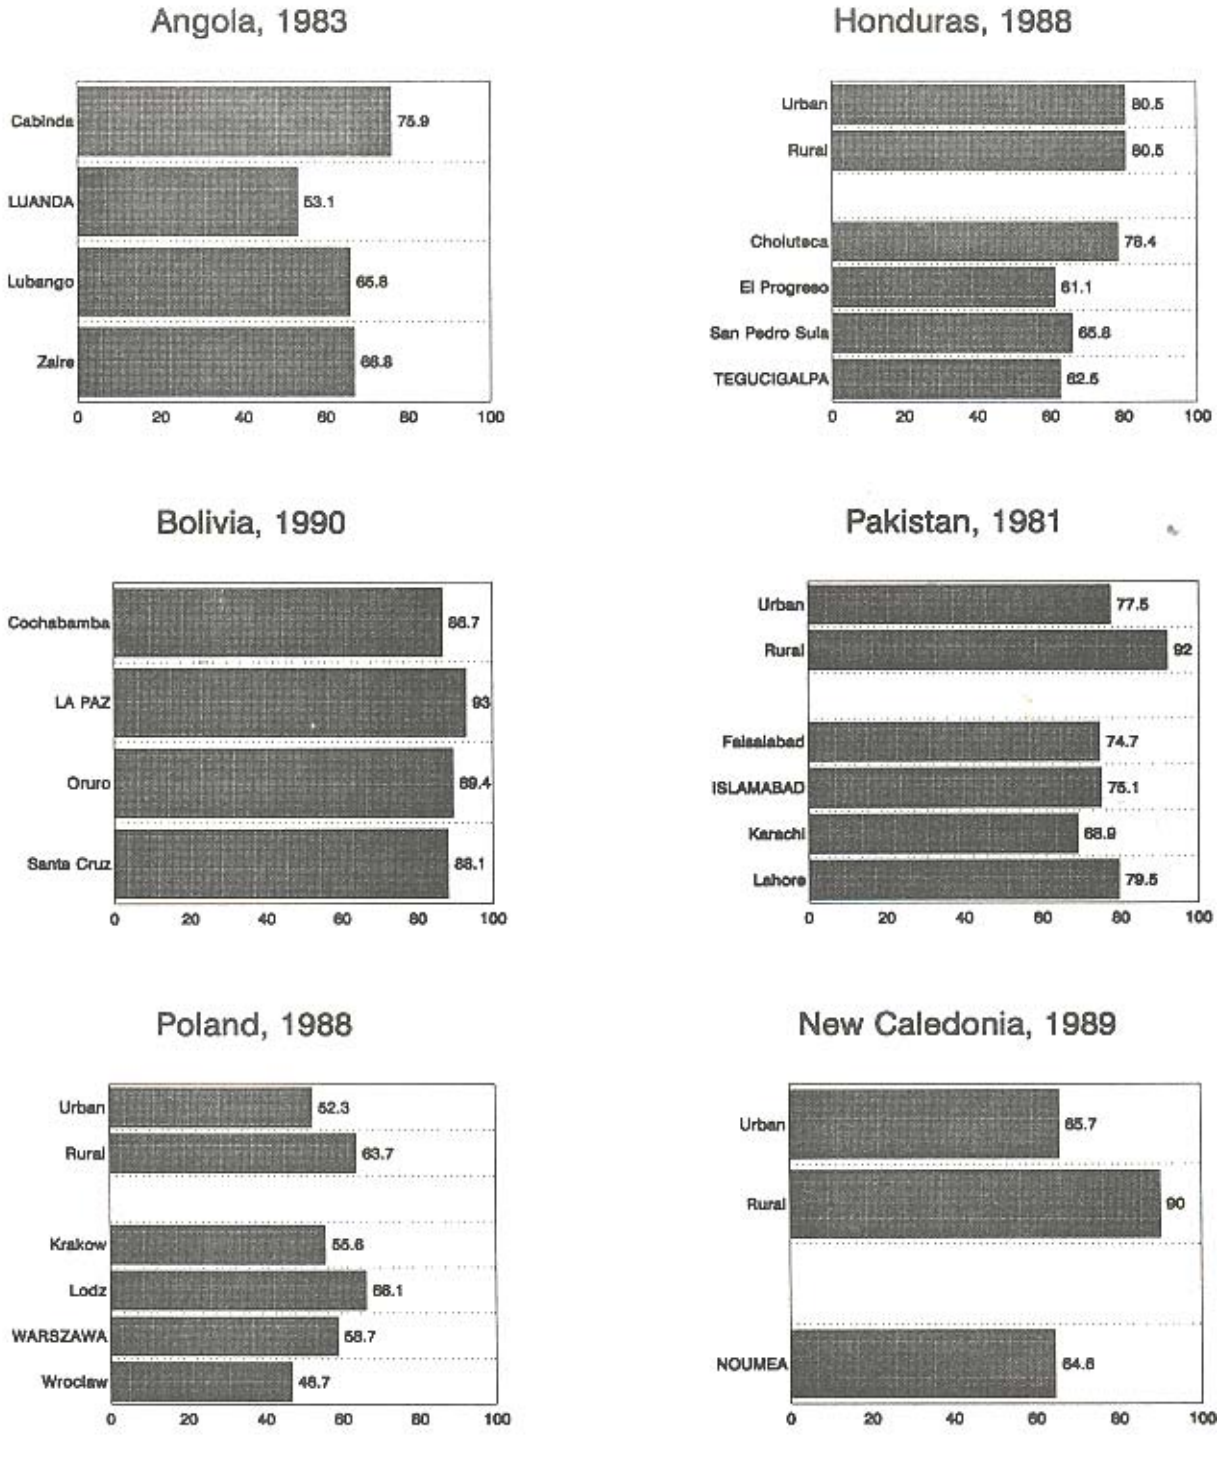

42 Including armed forces stationed in the area.

43 Data refer to the whole American Samoa.

44 Excluding diplomatic personnel and armed forces stationed outside country, the latter numbering 1,936 at 1966 census; also excluding alien armed forces within the country.

45 The difference between the sum of categories and the total refers to armed forces and unemployed. All figures have been randomly rounded to base 3.

Figure 5. Population resident since birth as percent of total resident population

Information for countries by region is presented from data shown in Table 5.

5. Resident population by sex and duration of residence: country or area, urban-rural areas, cities

(See notes at end of table.)

NOTES

1 Category includes 337 males and 338 females with unknown duration of residence.

2 Data refer to those residents who were present in Hong Kong on the Census reference date of 15 March 1991. They do not include transients, Vietnamese migrants and residents who were temporarily away from Hong Kong on that date.

3 Figures exclude Assam and some areas where 1981 Census could not be conducted. All figures are based on the processing of 20% sample schedules in bigger states with population of 10 million and above and 100% schedules in the remaining smaller states and union territories. Figures on duration of residence less than five years and five years or more are based on migrants according to place of last residence.

4 Including the Indian-held part of Jammu and Kashmir, the final status of which has not yet been determined.

5 Including data for East Jerusalem and Israeli residents in certain other territories under occupation by Israeli military forces since June 1967.

6 The sub-categories under "Not resident since birth" are: "Less than 4 years" and "4 years or more" instead of "Less than 5 years" and "5 years or more".

7 Including East Jerusalem.

8 Boundaries for classifying residents and not-residents are provinces.

9 Excluding Jammu and Kashmir, the final status of which has not yet been determined. Also excluded are Jungardh, Manavadar, Gilgit and Baltistan.

10 Singapore is a city state, so separate data on urban and rural areas are not available.
Figures on population and households refer to Singapore residents only. (Citizens and permanent residents).

11 Duration and place of residence are not stated.

12 Data refer to the territory prior to 3 October 1990, i.e. to Federal Republic of Germany. Note: In Germany the distinction between urban and rural areas is not of great importance. Therefore, Urban refers to "Kreisfreie Stadte", that is not attached to administrative districts (Landkreise). Rural refers "Landkreise", that is an administrative district.

13 Including 33,400 persons without information on densely/sparsely populated areas (male 17,900, female 15,500).

14 Data refer to less than ten years.

15 Data refer to ten years or more.

16 Category refers to resident population with unknown duration of residence.

17 Data refer to population residing in the commune of their birth.

18 Data refer to population residing in the commune other than the one of their birth.

19 Data refer to the former Socialist Federative Republic of Yugoslavia.

20 Total population are persons whose place of permanent residence is on the territory of SFR of Yugoslavia regardless whether they were during the critical moment of the census, in the country or abroad.

21 In the 1981 census, the following typology: URBAN and OTHER SETTLEMENTS was applied. Urban settlements are those which are, by corresponding legal act or agreement of competent socio-political community valid on 31.01.1981, established as urban settlements. Under RURAL are shown data for other settlements.

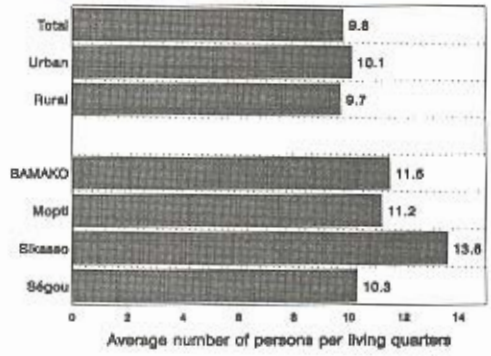

22 Data refer to broader urban area. As data for settlements level are not available, aggregated data for the level of communes which are not a part of mentioned cities are given. Data are those for population who permanently reside in the commune they were born in, that is those for persons who permanently reside outside the commune they were born in.

23 Data refer to the population that spent less than five years at the present address.

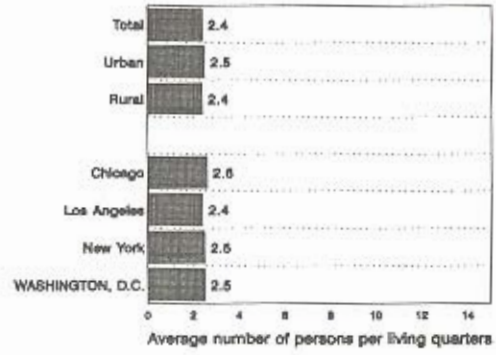

24 Data refer to the population that spent five years or more at the present address.

Figure 6. Average number of persons per living quarters

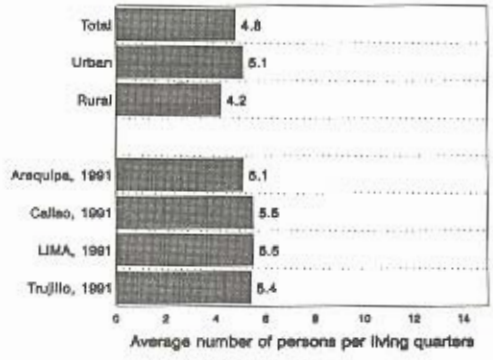

Mali, 1987

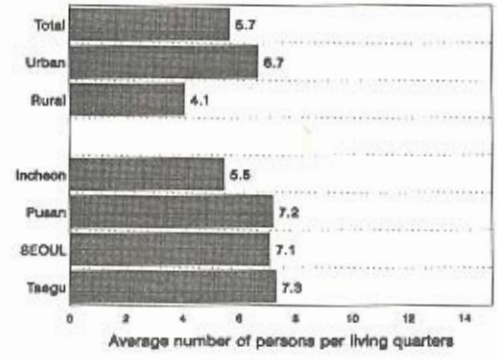

United States of America, 1990

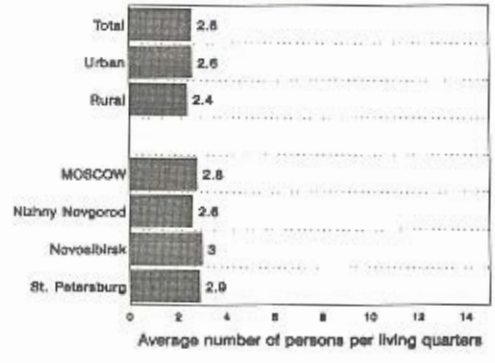

Peru, 1990

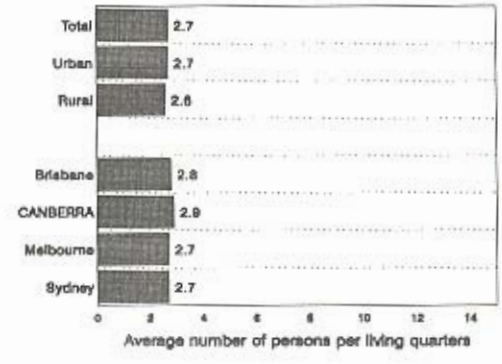

Korea, Republic of, 1990

Russian Federation, 1989

Australia, 1986

Information for a country with the largest number of living quarters by region is presented from data shown in Table 6.

6. Population, number of households, number of living quarters, average size of households, average number of households and persons in living quarters: country or area, urban-rural areas, cities

(See notes at end of table.)

GENERAL NOTES

All figures with "a" are provisional data.

NOTES

1 Source: Population and Housing Census 1987. Total population in households and institutions.

2 Data refer to dwelling units.

3 Data computed by UN.

4 Data refer to occupied housing units only. Data on vacant units are included in the figure for Total at country level.

5 Including 235 living quarters occupied by "visitors" on Census Day.

6 Data refer to Belongers (citizens of the Turks and Caicos Islands) only.

7 Data refer to the Metropolitan Statistical Area (MSA).

8 Figures are for the entire island of St. Thomas.

9 Data refer to the Government controlled area only.

10 Figures exclude Assam and some areas where 1981 Census could not be conducted. Including the Indian-held part of Jammu and Kashmir, the final status of which has not yet been determined.

11 Including data for East Jerusalem and Israeli residents in certain other territories under occupation by Israeli military forces since June 1967.

12 Not including households in qibbuzim.

13 Excluding Jordanian territory under occupation since June 1967 by Israeli military forces.

14 Data are preliminary.

15 Excluding Jammu and Kashmir, the final status of which has not yet been determined. Also excluded are Junagardh, Manavadar, Gilgit and Baltistan.

16 Figures on population and households refer to Singapore Residents only (citizens and permanent residents). Figures on housing and households are preliminary data grossed up from the 10% sample data. Singapore is a city state. Therefore separate data on urban and rural areas are not available.

17 Data include estates.

18 Data are displayed as received by the UN. However, the sum of urban and rural differs from the total.

19 Data exclude special enumeration groups.

20 URBAN areas: communities with more than 5000 inhabitants.

21 RURAL areas: communities with less than 5000 inhabitants.

22 Data refer to the territory prior to 3 October 1990, i.e. to Federal Republic of Germany.

23 Data on population refer to residents only.

24 In Germany the distinction between urban and rural areas is not of great importance. Therefore, "Urban" refers to "Kreisfreie Stadte"-that is a town not attached to administrative districts (Landkreise). Rural refers to "Landkreise", that is an administrative district.

25 Includes travelling people and homeless persons living rough on Census night.

26 Including 15,566 private households/livings quarters with no information on densely/sparsely populated areas (33,400 persons).

27 Data refer to population living in private households.

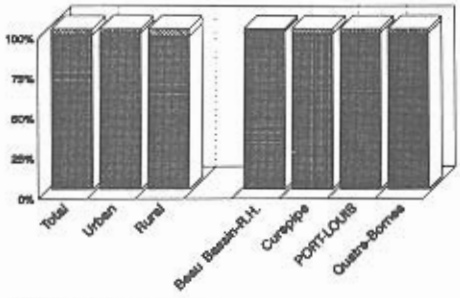

28 The 1991 population and Housing Census of Spain defined "rural areas" as entities up to 2,000 inhabitants, "intermediate areas" as entities from 2,001-10,000 inhabitants and "urban areas" as entities over 10,001 inhabitants. Here, "Rural" covers both rural and intermediate areas.

29 Urban area refers to non-administrative centres which are regarded as urban in character and have a population of 1,000 or greater.

30 Rural area refers to area not specifically designated as "Urban" - includes rural centres (population 300-999), administrative county or district territory not included in an urban area and inland waters, coastal inlets and harbours, oceanic waters and islands, which are outside urban areas.

NOTES

1 Data refer to transit.

2 Data refer to outdoor sleepers.

3 Source: Population and Housing Census 1987. Total population in households and institutions.

4 Data refer to dwelling units.

5 Data computed by UN.

6 Data refer to occupied housing units only. Data on vacant units are included in the figure for Total at country level.

7 Lodging and rooming houses refer to commercial establishments which may originally have been a private dwelling, having furnished rooms for rent, and identified by a sign or by a census representative speaking with a person in charge, a resident, a neighbor, etc., or which is occupied on Census Day by at least 10 persons unrelated to the person designated as Person 1.

8 Included are work and military camps.

9 Data refer to Hutterite Colonies.

10 Including 235 living quarters occupied by "visitors" on Census Day.

11 Included are non-residential units.

12 Included are caves and other natural shelters.

13 Included are 26 commercial units and 56 residents.

14 Included are 94 commercial units and 214 residents.

15 Included are 972 commercial units and 1954 residents.

16 Included are 105 commercial units and 283 residents.

17 Data refer to occupied housing units whether or not people were present or absent.

18 Data refer to housing units whether or not people were present or absent.

19 Category includes type not stated.

20 Data refer to a detached house, apartment in an apartment building, rooms in buildings for renting rooms and whose occupants share the facilities, servant's quarters usually built on the roof of a house and mobile units.

21 Data refer to Belongers (citizens of the Turks and Caicos Islands) only.

22 Data refer to the Metropolitan Statistical Area (MSA).

23 Figures are for the entire island of St. Thomas.

24 Data refer to residential collective living quarters and pensions.

25 Data refer to private dwellings.

26 Data refer to one-family houses, apartments in apartment buildings and rented rooms whose occupants share one or more facilities.

27 Data refer to the Government controlled area only.

28 Data refer to temporary housing.

29 Data refer to institutions and quarters.

30 Figures exclude Assam and some areas where 1981 Census could not be conducted. Including the Indian-held part of Jammu and Kashmir, the final status of which has not yet been determined.

31 Data on population in "Unconventional dwellings" include homeless people.

32 Including data for East Jerusalem and Israeli residents in certain other territories under occupation by Israeli military forces since June 1967.

33 Not including households in qibbuzim.

34 Excluding Jordanian territory under occupation since June 1967 by Israeli military forces.

35 Data are preliminary.

36 Data refer to foreigners.

37 Included are secondary housing units, supplementary housing units and other units.

38 Data refer to households living in fishing boats.

39 Excluding Jammu and Kashmir, the final status of which has not yet been determined. Also excluded are Junagardh, Manavadar, Gilgit and Baltistan.

40 Figures on population and households refer to Singapore Residents only (citizens and permanent residents).
Figures on housing and households are preliminary data grossed up from the 10% sample data.
Singapore is a city state. Therefore separate data on urban and rural areas are not available.

41 Living quarters other than housing units.

42 Data include estates.

43 Data include camps.

44 Including dwellings under construction.

45 Data are displayed as received by the UN. However, the sum of urban and rural differs from the total.

46 Data refer to urban population excluding special enumeration groups.

47 Data refer to rural population excluding special enumeration groups.

48 Estimates.

49 URBAN areas: communities with more than 5000 inhabitants.

50 RURAL areas: communities with less than 5000 inhabitants.

51 Data refer to the commune of Plovdiv.

52 Data are displayed as received by the UN. However, the sum of individual categories differs from the total.

53 Data refer to the territory prior to 3 October 1990, i.e. to Federal Republic of Germany.

54 In Germany the distinction between urban and rural areas is not of great importance. Therefore, "Urban" refers to "Kreisfreie Stadte"-that is a town not attached to administrative districts (Landkreise). Rural refers to "Landkreise", that is an administrative district.

55 Data on population refer to residents only.

56 Data refer to special housing units arrangements for students, elderly and some other special population groups.

57 Includes travelling people and homeless persons living rough on Census night.

58 The category 'Unconventional dwellings' here refers to Temporary Private Household, that is a private household occupying a caravan mobile home or other temporary dwelling.

59 Including 15,566 private households/livings quarters with no information on densely/sparsely populated areas (33,400 persons).

60 Data refer to private households.

61 Data refer to population living in private households.

62 Data refer to population aged 67 years and over living in joint households.

63 The 1991 population and Housing Census of Spain defined "rural areas" as entities up to 2,000 inhabitants, "intermediate areas" as entities from 2,001-10,000 inhabitants and "urban areas" as entities over 10,001 inhabitants. Here, "Rural" covers both rural and intermediate areas.

64 The difference between the total number of conventional dwellings and the sum of occupied and vacant conventional dwellings refers to temporary occupied housing units.

65 Data refer to occupants of marginal living quarters living in private or collective households.

66 Data refer to members of collective households.

67 Data refer to apartments shared by two or more tenants/households.

68 Data refer to the number of hotel suites.

69 Data refer to the former Socialist Federative Republic of Yugoslavia.

70 Households (dwellings) and living quarters are synonymous by definition in the New Zealand Census of Population and Dwellings. Conventional dwelling is a permanent dwelling occupied by a private household.

71 Unconventional dwelling is a private dwelling that is temporary or mobile (such as a tent, caravan, campervan or boat) and occupied on census night.

72 Data refer to population living in 2,481 conventional dwellings of unspecified type.

73 Urban area refers to non-administrative centres which are regarded as urban in character and have a population of 1,000 or greater.

74 Data refer to the population living in 1,833 conventional dwellings of unspecified type.

75 Rural area refers to area not specifically designated as "Urban" - includes rural centres (population 300-999), administrative county or district territory not included in an urban area and inland waters, coastal inlets and harbours, oceanic waters and islands, which are outside urban areas.

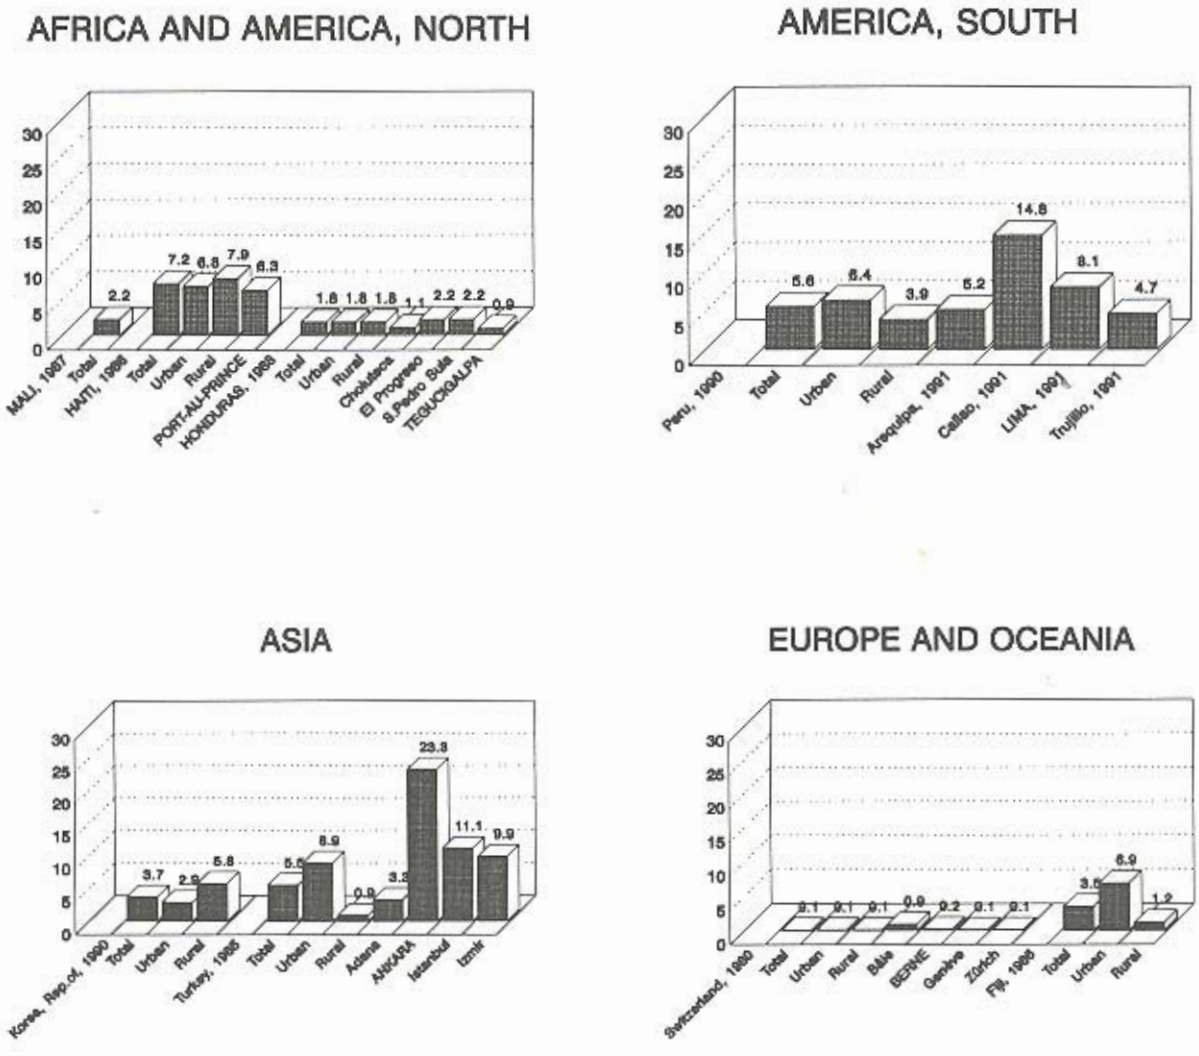

76 Data refer to the population living in 651 conventional dwellings of unspecified type.

77 Data refer to population living in 99 conventional dwellings of unspecified type.

78 Data refer to population living in 15 conventional dwellings of unspecified type.

79 Data refer to population living in 6 conventional dwellings of unspecified type.

Figure 8. Squatter households as percentage of total number of households

Information for countries or areas on squatter settlements by region is presented from data shown in Table 8.

8. Homeless population by sex, number of homeless households and number of squatter households: country or area, urban-rural areas, cities

(See notes at end of table.)

GENERAL NOTES

Percentages displayed in this table are the number of population attending school in each age-sex group per 100 total population in the same age sex-group, excluding population of unknown school attendance.

Altough in general data refer to the population age 5-24 in some cases that age interval differed as shown in the first column.

* Data are provisional.

NOTES

1 De jure population.

2 Excluding Mayotte.

3 For African population only.

4 School is compulsory up to 16 years, therefore the question on attendance is not asked to those under 14 years.

5 De jure population, excluding persons residing in institutions. Also, because of rounding, totals are not in all cases the sum of parts. Figures are based on a 20 per cent sample of census returns.

6 Excluding transients and residents of the former Canal Zone.

7 Data refer to the entire island of St. Thomas.

8 The total population for 10-14 year old is LESS than the reported figure for 10-14 year old students attending school in Charlotte Amalie since students from the island of St. John attend school in Charlotte Amalie beginning with the 9th grade; some students from St. John may also attend schools in Charlotte Amalie PRIOR to the 9th grade.

9 De jure population, but excluding civilian citizens absent from country for extended period of time. Also excluding armed forces overseas.

10 Data have not been adjusted for underenumeration, estimated at 2.6 per cent. Figures are based on a 14 percent sample of census returns.

11 Excluding Indian jungle population.

12 Including the Indian-held part of Jammu and Kashmir, the final status of which has not yet been determined.

13 Excluding diplomatic personnel outside the country, and foreign military and civilian personnel and their dependants stationed in the area.

14 De jure population, excluding diplomatic personnel outside the country, and foreign military and civilian personnel and their dependants stationed in the area.

15 Excluding Jammu and Kashmir, the final status of which has not yet been determined. Also excluded are Junagardh, Manavadar, Gilgit and Baltistan.

16 De jure population. Figures are based on a 10 per cent of census returns.

17 Attending School corresponds to Literate population according to age groups.

18 De jure population. Figures are based on national registers.

19 De jure population but excluding diplomatic personnel outside the country and including foreign diplomatic personnel not living in embassies or consulates.

20 Data refer to the territory prior to 3 October 1990, i.e. to Federal Republic of Germany.

21 Data on school attendance refer to population aged 15 years and over. Education in primary school is obligatory in Poland (for children aged 7-15 years).

22 Excluding civilian aliens within the country, and including civilian nationals temporarily outside the country.

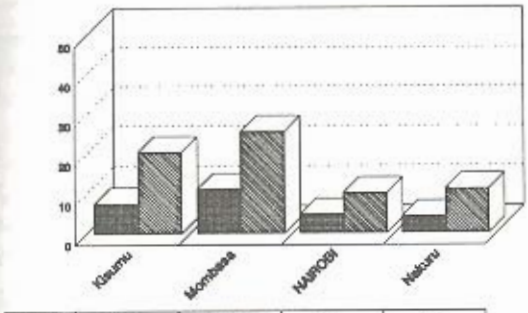

23 Data exclude adjustment for underenumeration, estimated at 1.9 per cent.

24 De jure population. Because of rounding, totals are not in all cases the sum of parts. Excluding diplomatic personnel and armed forces outside the country, the latter numbering 1,936 at 1966 census; also excluding alien armed forces within the country.

25 Education on Norfolk Island is provided free of charge by the Norfolk Island Government and is compulsory for children between the ages of 6 and 15 years. For further education eg. University degrees and apprentichips students must go to mainland institutions in either Australia or New Zealand.

GENERAL NOTES

Literacy is defined as ability to both read and to write; hence unless otherwise specified, semi-literates (persons able to read but not to write) are included with illiterate population. Percentages are the illiterate population 15 years of age and over per 100 total population of corresponding sex-age group, excluding population of unknown literacy.

NOTES

* Provisional data.

1 De jure population.

2 For Egyptian nationals only.

3 Excluding unemployed population.

4 Data refer to the population aged 10 years and over.

5 For Senegalese nationals only.

6 Data presented in percentage. Average figures, calculated by UN.

7 Data refer to the population aged 14 years and over.

8 Data are taken from the 1981 Population Census and refer to population aged 10 years and over, excluded are the disabled persons. They are expressed in percentage.

9 Excluding tourist and the former Canal Zone.

10 Excluding nomadic Indian tribes.

11 Data have not been adjusted for underenumeration, estimated at 2.6%.

12 Covering only the civilian population of 30 provinces, municipalities and autonomous regions. Excluding Jinmen and Mazhu islands.

13 Data refer to the Government controlled area only.

14 Data displayed in percentage.

15 Including data for the Indian-held part of Jammu and Kashmir, the final status of which has not yet been determined. Excluding Assam.

16 Data refer to the population aged 7 years and over.

17 Excluding Jammu and Kashmir, the final status of which has not yet been determined. Also excluded are Jungardh, Manavadar, Gilgit and Baltistan.

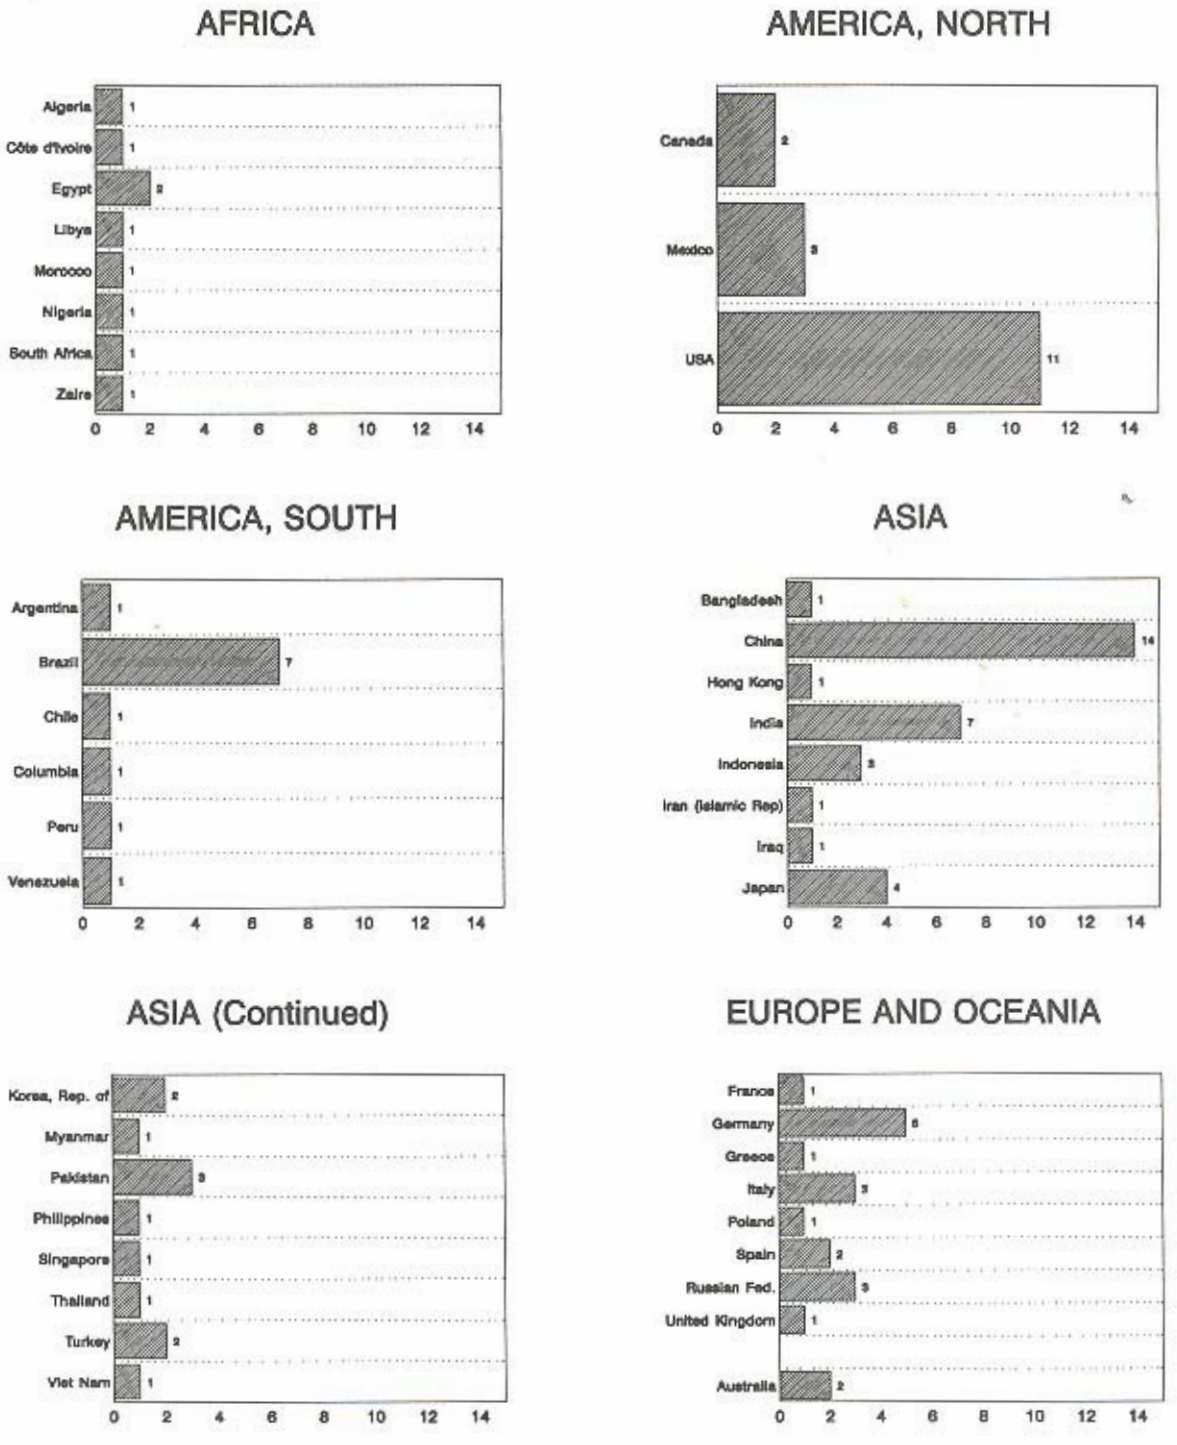

18 Based on a 10 per cent sample of census returns.

19 Data refer to the population aged 6 years and over.

20 For Maltese population only.

21 Data on "Illiterate population" refer to persons 10 years and more.

Figure 11. One hundred world's largest urban agglomerations by country or area

Figure 12. Land use, 1992

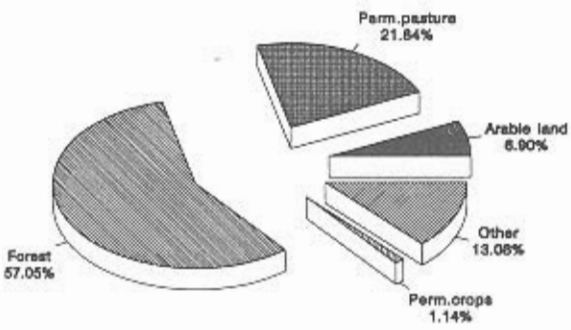

Sudan

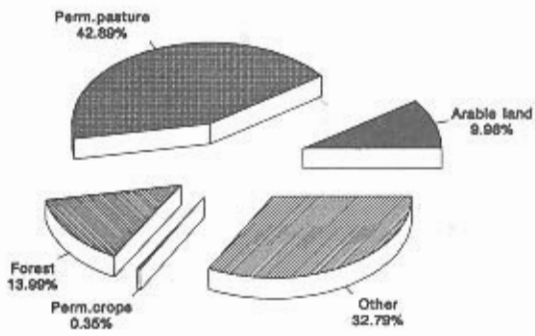

Canada

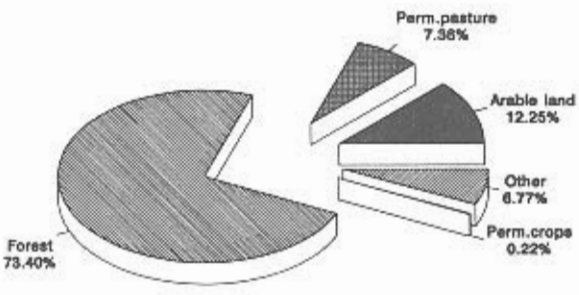

Brazil

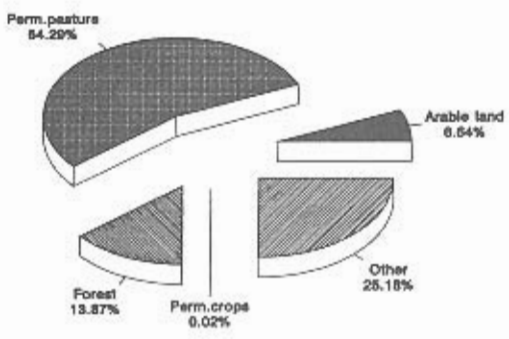

China

Russian Federation

Australia

Information for a country with the largest surface area by region is presented from data shown in Table 12.

12. Land use in thousands hectares, 1987 and 1992: world, region, country or area

(See notes at end of table.)

GENERAL NOTES

Data with "x" are FAO estimates.
Data with "*" are unofficial figures.

Figure 13. Built-up areas in cities by land use

Information for cities with the largest built-up area by region is presented from data shown in Table 13. Data for cities in South America and Oceania were not available.

13. Urban land use: urban areas, cities (square kilometers)

(See notes at end of table.)

	Urban land area by use

NOTES

1 Agricultural land.

2 Data include "Transportation".

3 Data refer to Education, Finance, Services and Basic Activities.

4 Data refer to undeveloped land.

5 Built-up land area is the total land area for Residential, Industrial, Commercial, Transportation, Recreation (Open Space) and other.

6 Data refer to Green Area.

7 Built-up land includes new industrial sites.

8 Agricultural land (Farm Holding Area) refers to licensed farms excluding land occupied by pure rubber and coconut plantations.

9 Inland waters include open spaces, public gardens, cemeteries, non-built up area in military establishments, quarries, rubber and coconut plantations.

10 Other refers to marsh and tidal waste.

11 Data refer to the territory prior to 3 October 1990, i.e. to Federal Republic of Germany.

12 Areas of settlement and traffic comprises building areas, free areas, operation areas (without dismantling land), recreation areas, traffic areas and cemeteries.

13 Areas serving agriculture, farming of meadow-land and willow (pasture) land, horticulture or viticulture (wine-growing), including marshy county and moorland.

14 Areas covered with trees and bushes and mainly used for forestry.

15 Areas covered permanently or partially with water, no matter if the water flows off or stands in natural or artificial beds.

16 Including forests and inland waters on the built-up territory.

17 Category refers to forest and woodland and inland waters.

18 Including secondary residences and vacation houses.

19 Data include commercial land.

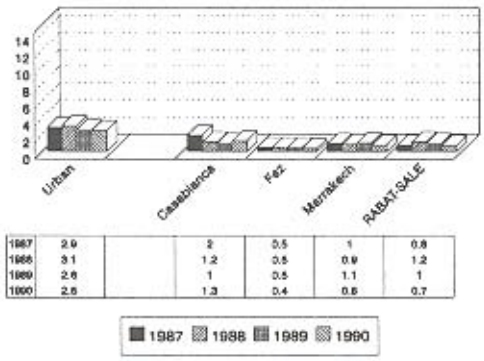

20 Mainly open land without, or with insignificant, vegetation cover.

21 Data refer to the area of the National Park.

22 Data refer to residential, industrial and commercial land.

NOTES

1 Data refer to issued construction licenses.

2 Data refer to the Metropolitan Statistical Area (MSA).

3 Data refer to the Government controlled area only.

4 Figures projected on the basis of 1971 and 1981 Census data.

5 Including the Indian-held part of Jammu and Kashmir, the final status of which has not yet been determined.

6 "Total dwellings constructed" includes also residential buildings with unknown number of dwellings.

7 Including data for East Jerusalem and Israeli residents in certain other territories under occupation by Israeli military forces since June 1967.

8 Including East Jerusalem.

9 Excluding Jammu and Kashmir, the final status of which has not yet been determined. Also excluded are Junagardh, Manavadar, Gilgit and Baltistan.

10 Source: Statistical Abstract 1991.

11 Preliminary data for 1991.

12 Data refer to the territory prior to 3 October 1990, i.e. to Federal Republic of Germany.

13 Data refer to urban areas together with Budapest.

14 Annual Housing Statistics Bulletin 1991 - Department for Environment.

15 Data refer to authorized dwellings constructed.

16 Data are provisional.

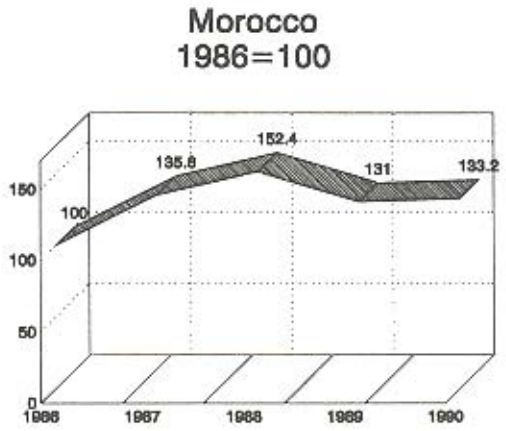

17 Data on the number of constructed dwellings are estimated by UN. Estimates are based on the average number of dwellings in newly build buildings in the period 1986-1990. Data on buildings are taken from the Census of Buildings 1990.

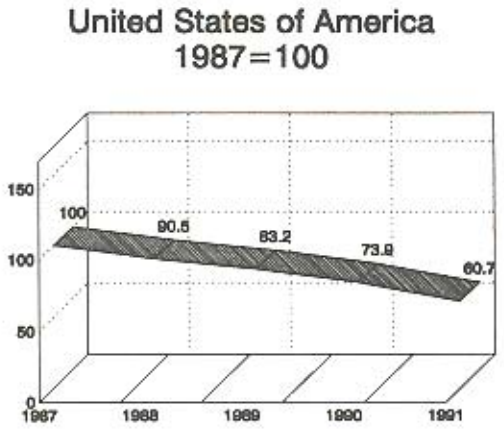

18 Data for 1989 refer to the first quarter of 1989.

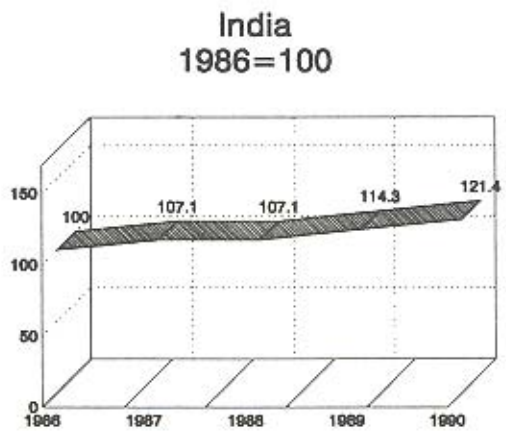

19 Estimates for 1989 calculated by UN based on the dwellings constructed in the first quarter of 1989.

20 Total includes nonresidential buildings.

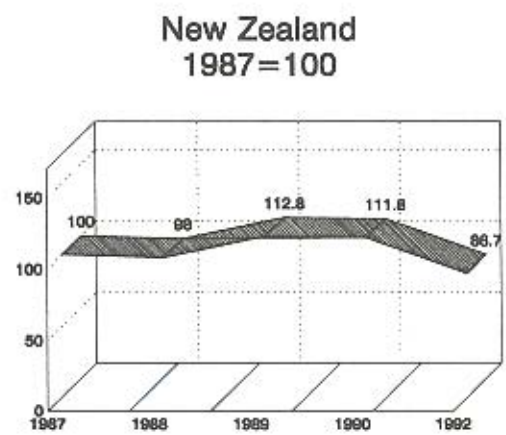

Figure 15. Index of total number of constructed urban dwellings

Information for a country with the largest number of dwellings constructed in urban areas of the country by region is presented from data shown in Table 15. The base indexes were computed on the basis of the year as stated in the subtitle for each graph. Data on constructed dwellings in urban areas of South America were not available.

15. Number of dwellings constructed by type of building in which dwellings are located and total number of constructed rooms: country or area, urban-rural areas, cities

(See notes at end of table.)

	Type of building					Total rooms constructed
	Total dwellings constructed	Residential		Non-residential	Unknown	
		With one or two dwellings	With more than two dwellings

NOTES

1 Data refer to issued construction licenses.

2 Data refer to the Metropolitan Statistical Area (MSA).

3 Data refer to the Government controlled area only.

4 Including the Indian-held part of Jammu and Kashmir, the final status of which has not yet been determined.

5 Figures projected on the basis of 1971 and 1981 Census data.

6 Including data for East Jerusalem and Israeli residents in certain other territories under occupation by Israeli military forces since June 1967.

7 "Total dwellings constructed" includes also residential buildings with unknown number of dwellings.

8 Including East Jerusalem.

9 Excluding Jammu and Kashmir, the final status of which has not yet been determined. Also excluded are Junagaradh, Manavadar, Gilgit and Baltistan.

10 URBAN areas: communities with more than 5000 inhabitants.

11 RURAL areas: communities with less than 5000 inhabitants.

12 Preliminary data for 1991.

13 Data refer to the territory prior to 3 October 1990, i.e. to Federal Republic of Germany. In Germany the distinction between urban and rural areas is not of great importance. Therefore, "Urban" refers to "Kreisfreie Stadte"- that is a town not attached to administrative districts (Landkreise). Rural refers to "Landkreise", that is an administrative district.

14 Only dwellings built in new buildings.

15 Data refer to urban areas together with Budapest.

16 Data refer to authorized dwellings constructed.

17 Data refer to individual buildings.

18 Data are provisional.

19 Data on the number of constructed dwellings are estimated by UN. Estimates are based on the average number of dwellings in newly build buildings in the period 1986-1990. Data on buildings are taken from the Census of Buildings 1990.

20 Data for 1989 refer to the first quarter of 1989.

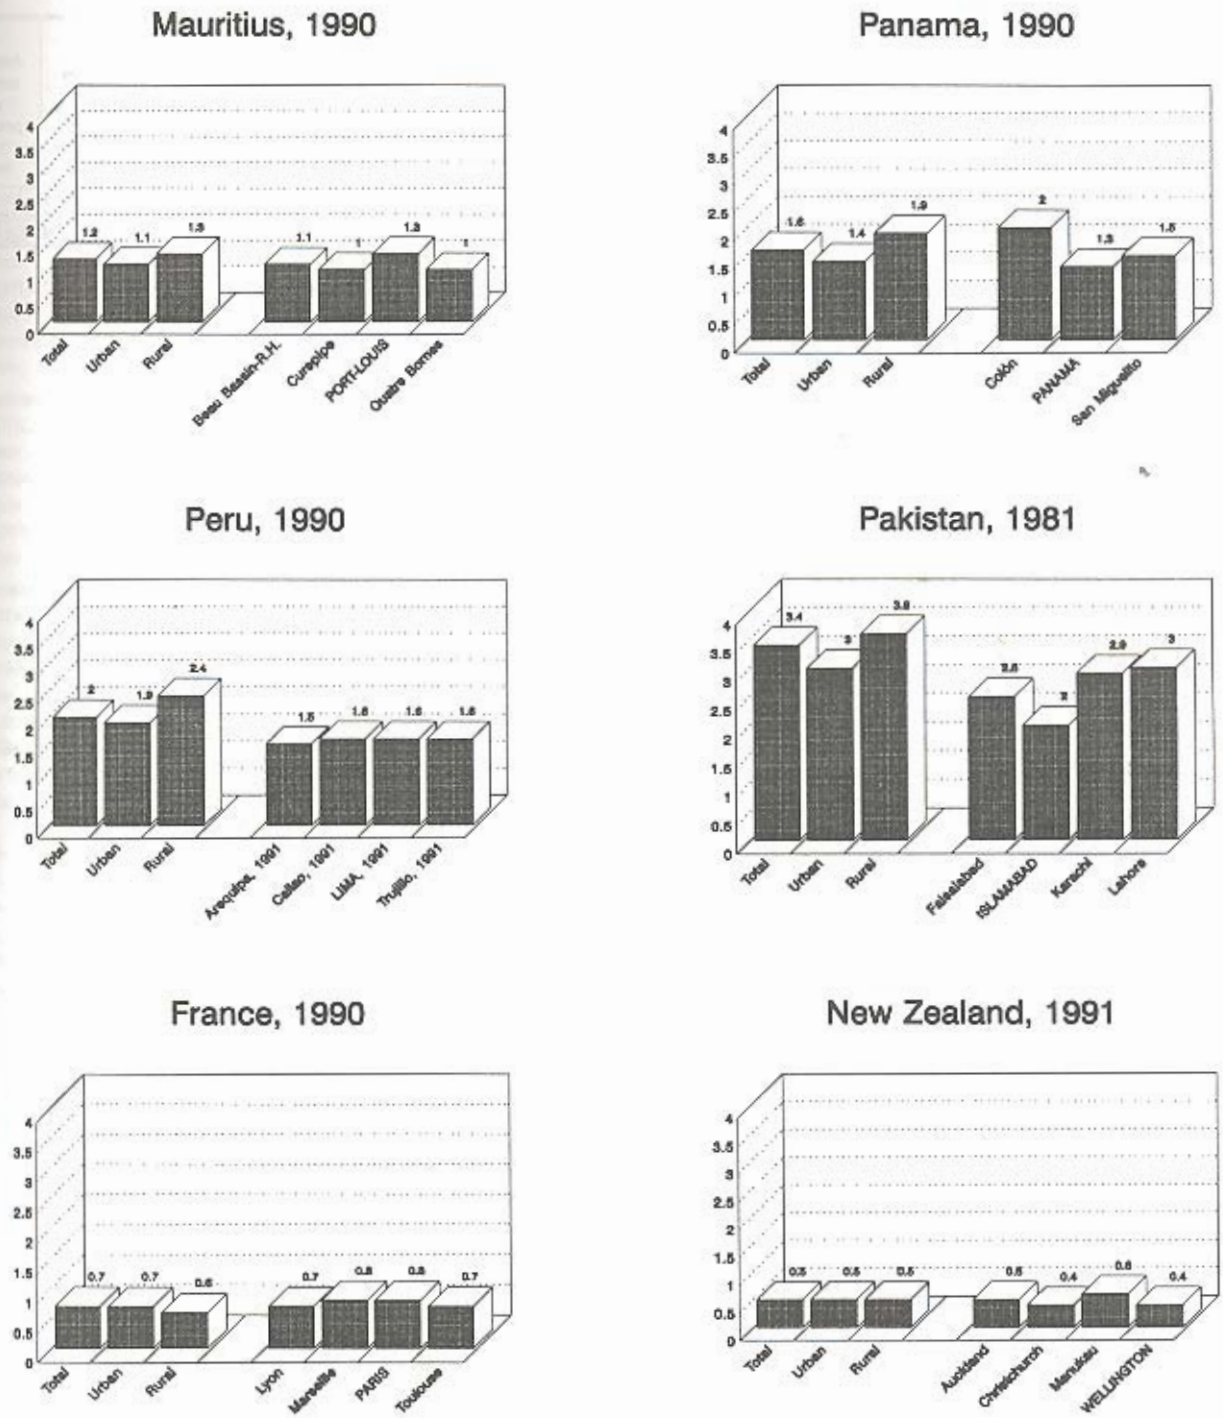

21 Data refer to the number of building permits issued authorising the construction of dwelling.

22 Urban area refers to non-administrative centres which are regarded urban in character and have a population of 1,000 or greater.

23 Rural area refers to the area not specifically designated as "urban" - includes rural centres (population 300-999), administrative county or district territory not included in an urban area and inland waters, coastal inlets and harbours, oceanic waters and islands, which are outside urban areas.

24 Total includes nonresidential buildings.

Figure 16. Average number of persons per room in occupied housing units

Information for a country with the largest number of occupied housing units by region is presented from data shown in Table 16.

16. Occupied housing units by number of rooms per housing unit, number and percentage, total number of rooms, average size of housing unit and average number of persons per room: country or area, urban-rural areas, cities

(See notes at end of table.)

	Total occupied housing units	Occupied housing units by number of rooms						Total number of rooms for all units	Average size (rooms per unit)	Average number of persons per room
		One room units	Two room units	Three room units	Four room units	Five or more room units	Unknown

NOTES

1 Data refer only to units covered by the sample for the National Household Survey 1986.

2 Source: Malawi National Housing Survey 1986 (unweighed sample).

3 Data refer to households in housing units.

4 Excludes housing units occupied by institutional households.

5 Data are presented in percentage

6 Total number or rooms for all units excludes 121 cases where the number of rooms were not reported.

7 Data refer to occupied housing units with permanent residents. Excluded are huts and natural shelters.

8 Data are estimated on the basis of 2.5 % sample.

9 Data refer to the number of occupied housing units with people present at the time of census.

10 Data don't include 11,763 "refugee" housing units which do not meet characteristics of a housing unit, also 136,341 housing units which were not occupied were excluded.

11 Data don't include 76,210 housing units with unknown number of rooms.

12 Data don't include 11,365 housing units with unknown number of rooms.

13 Data refer to Belongers (citizens of the Turks and Caicos Islands) only.

14 Data refer to the Metropolitan Statistical Area (MSA).

15 Figure represents the total number of two-, three- and four-room units, not only three-room units.

16 Figures are for the entire island of St. Thomas.

17 UN estimate.

18 Data as received by the UN. However the sum of the individual categories differs from the total.

19 Data refer to the Government controlled area only.

20 Figures exclude Assam and some areas where 1981 Census could not be conducted. Also, not included are institutional households for which the number of living rooms in occupation of household was not canvassed.

21 Including the Indian-held part of Jammu and Kashmir, the final status of which has not yet been determined.

22 Data include a total of 769,596 households with no exclusive room, of which 149,001 in urban and 620,505 in rural areas.

23 There were 51,135 households having no exclusive room and/or homeless.

24 Excluding institutional and homeless households.

25 Including data for East Jerusalem and Israeli residents in certain other territories under occupation by Israeli military forces since June 1967.

26 Including East Jerusalem.

27 Excluding Jordanian territory under occupation since June 1967 by Israeli military forces.

28 Data refer to occupied conventional, occupied unconventional dwellings and occupied collective living quarters.

29 Excluding Jammu and Kashmir, the final status of which has not yet been determined.

30 Data include also estates.

31 Data refer to housing units with four or more bedrooms.

32 Data refer to housing units without any bedroom.

33 Difference between the sum of categories and total refers to tents, huts, caves, etc.

34 Data refer to apartments.

35 Data refer to four and more room units.

36 Data refer to units without any room.

37 URBAN areas: communities with more than 5000 inhabitants.

38 RURAL areas: communities with less than 5000 inhabitants.

39 Data refer to commune of Plovdiv.

40 Data refer to the territory prior to 3 October 1990, i.e. to Federal Republic of Germany.

41 In Germany the distinction between urban and rural areas is not of great importance. Therefore, "Urban" refers to "Kreisfreie Stadte"-that is a town not attached to administrative districts (Landkreise). Rural refers to "Landkreise", that is an administrative district.

42 Estimated data.

43 Data refer to permanent households in permanent housing units.

44 Data refer to housing units with three or more rooms.

45 Including 15,566 housing units (dwellings) with no information on densely/sparsely populated areas.

46 Data refer to conventional dwellings only.

47 Including conventional dwellings with unknown number of rooms.

48 The definition of a "room" does not cover kitchen even if it suits the definition of a room.

49 Data refer to principal residences only. According to census definitions principal residence refer to the housing unit occupied by one or more persons for most of the year. Secondary residence is a housing unit occupied seasonally and is not considered to be a usual residence. Room is defined as bedroom, living room, dining room, reception, study room, play room, servant's quarters and kitchen.

50 Data exclude kitchens.

51 Individual dwellings in rural areas are not classified by number of rooms.

52 Data refer to occupied and vacant dwellings.

53 Data refer to units with number of bedrooms.

54 Data include units without bedroom, being 28 units for Canberra, 153 units for Melbourne, 292 units for Sydney and 46 units for Brisbane.

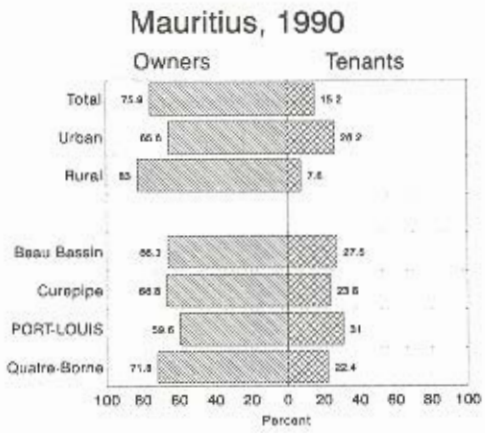

55 "Occupied housing units" refer to conventional dwellings only (excluding unconventional dwellings) and "Households in housing units" equates to "Occupied housing units".

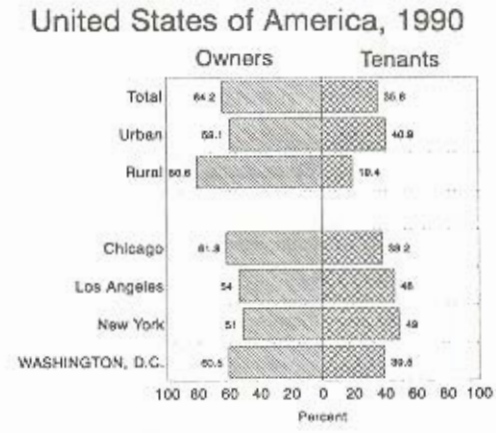

56 Data refer to both one-room and two-room units.

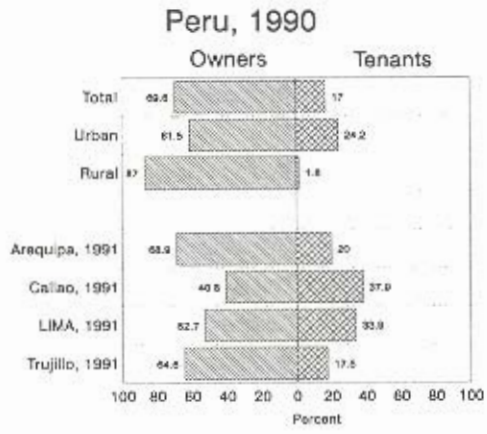

57 Urban area refers to non-administrative centres which are regarded urban in character and have a population of 1,000 or greater.

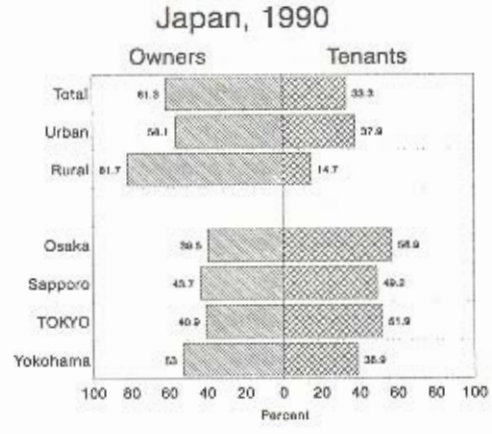

58 Rural area refers to area not specifically designated as "Urban" - includes rural centres (population 300-999), administrative county or district territory not included in an urban area and inland waters, coastal inlets and harbours, oceanic waters and islands, which are outside urban areas.

Figure 17. Percentage of households by tenure

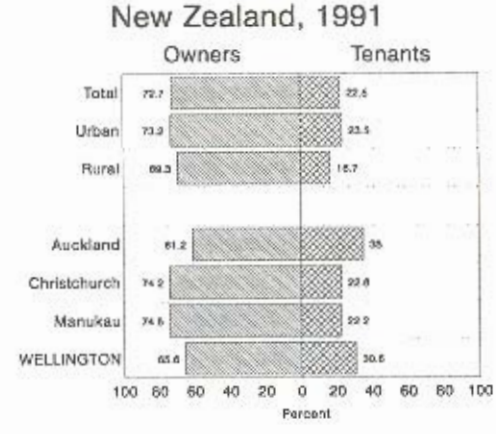

Information for a country with the largest number of households by region is presented from data shown in Table 17.

17. Number of households in occupied housing units by tenure: country or area, urban-rural areas, cities

(See notes at end of table.)

NOTES

1 Data refer to "rent free" and "not stated" categories.

2 Data refer to housing units.

3 Data are presented in percentage.

4 Data refer to households occupying a housing unit free of charge.

5 "Other" includes "not reported".

6 Data include 929 households occupying housing units free of rent and 70 households with status not stated.

7 Data are estimated on the basis of 2.5 % sample.

8 Data refer to the Metropolitan Statistical Area (MSA).

9 Data refer to households paying their housing in service.

10 Data refer to the Government controlled area only.

11 Data refer to domestic households only.

12 Including the Indian-held part of Jammu and Kashmir, the final status of which has not yet been determined.

13 The total of owner occupant and tenant households does not tally with the total number of households as the figures have been estimated by inflating the sample values by five.

14 Data are displayed as received by the UN. However, the sum of individual categories differs from the total.

15 Including data for East Jerusalem and Israeli residents in certain other territories under occupation by Israeli military forces since June 1967.

16 Excluding Jordanian territory under occupation since June 1967 by Israeli military forces.

17 Figures on population and households refer to Singapore residents only (citizens and permanent residents). Figures on housing and households are preliminary data grossed up from the 10% sample data.

18 Data refer to rented housing units.

19 Data include households whose tenure is unknown.

20 URBAN areas: communities with more than 5000 inhabitants.

21 RURAL areas: communities with less than 5000 inhabitants.

22 The category 'Other' covers two categories, as follows:

	Total	Urban	Rural
Households that are owners and renters at the same time	30842	27893	2949
Other	3146	1692	1434

23 Data refer to the territory prior to 3 October 1990, i.e., to Federal Republic of Germany. In Germany the distinction between urban and rural areas is not of great importance. Therefore, "Urban" refers to "Kreisfreie Stadte"-that is a town not attached to administrative districts (Landkreise). Rural refers to "Landkreise", that is an administrative district.

24 Data refer to households in conventional dwellings.

25 Households living under the title of tenant, co-tenant.

26 Households living under the title of sub-tenant, bed-tenant and without title.

27 Including households in conventional dwellings co-operatives.

28 Data refer to principal residences only. According to census definitions principal residences refer to the housing unit occupied by one or more persons for the most of the year. Secondary residence is a housing unit occupied seasonally and is not considered to be a usual residence.

29 Included are 538,752 principal residences occupied free of charge.

30 Data refer to units occupied free of charge and sub-tenant households.

31 Tenants refer to holders of tenancy rights.

32 Data refer to dwellings occupied by a household whose member is a holder of tenancy rights.

33 Other refers to tenants and subtenants and unknown.

34 Due to different methodology, this portion of a table should be read:

	Total	Urban	Rural
Total number of households in housing units	5187422	4513692	673689
Owner occupant	3587324	3092097	494205
Tenant in government-owned housing units	347188	327096	20088
Tenant in privately-owned housing units, including other rental arrangements	944672	893855	93318
Tenant - type of landlord not stated	42505		
Other/Inadequately described and tenancy not stated	266734	200644	65079

35 Data refer only to principal residences.

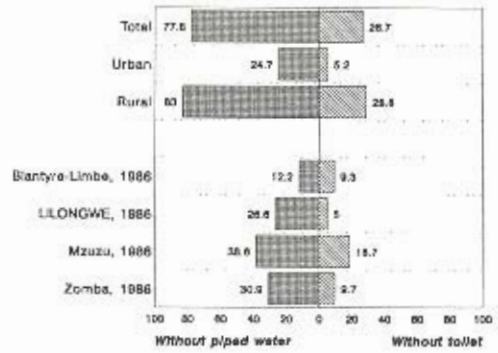

36 "Other" refer to dwellings occupied free of rent and dwellings offered by employer.

37 Tenanted dwellings include those for which no landlord is specified.

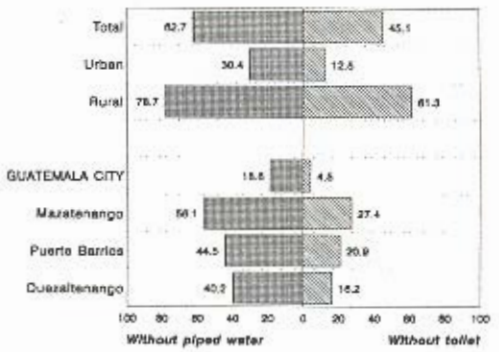

38 Data refer to dwellings occupied rent free and those of unspecified tenure.

Figure 18. Percentage of occupied housing units without piped water and without toilet of any type

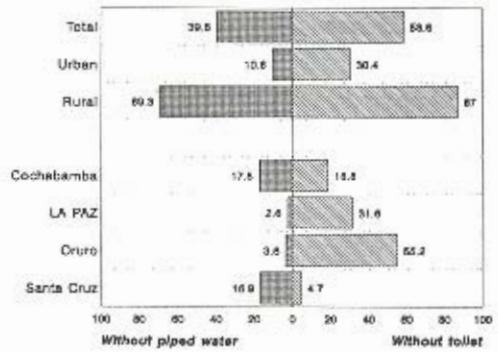

Malawi, 1987

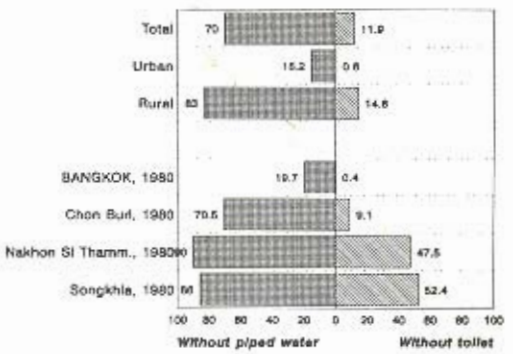

Guatemala, 1981

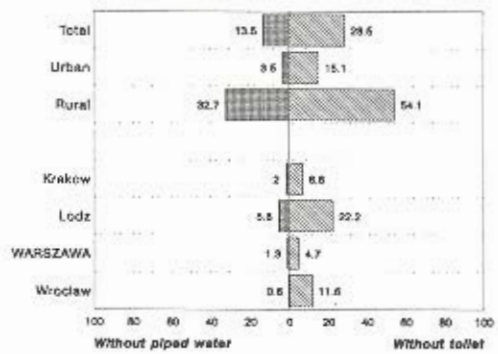

Bolivia, 1988

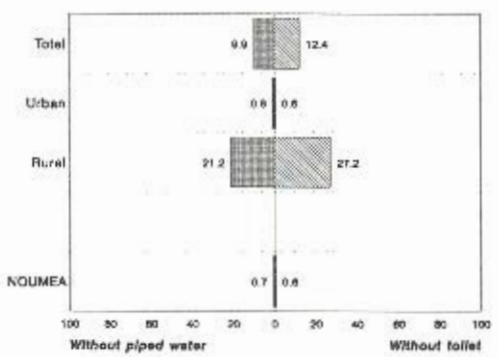

Thailand, 1990

Poland, 1988

New Caledonia, 1989

Information for a country with the largest number of occupied housing units without piped water and without toilet of any type by region is presented from data shown in Table 18.

18. Occupied housing units by water supply system and toilet installation: country or area, urban-rural areas, cities

(See notes at end of table.)

	Total occupied housing units	Water supply system					Toilet installation				
		With piped water			Without piped water	Unknown	With toilet of any type			Without toilet of any type	Unknown
		Total	Inside	Outside			Total	Flush toilet	Other toilet

NOTES

1 Data are from the Population and Housing Census 1987.

2 Source: Malawi National Housing Survey 1986 (unweighed sample)

3 Data refer to households in housing units

4 Data are presented in percentage.

5 Data refer to households having piped water inside unit and households providing water from public taps.

6 Data refer to occupied units with permanent residents. Excluded are huts and natural shelters.

7 Data refer to housing units with piped water outside the units disregarding how far it is.

8 Data are estimated on the basis of 2.5 % sample.

9 All data in this table do not include 11,763 "refugee" housing units which do not meet characteristics of a housing unit, also 136,341 housing units not occupied were excluded.

10 Data include housing units with toilet(74,325) which are unknown whether they have water connections.

11 Data do not include 2,217 "refugee" housing units which do not meet characteristics of a housing unit, also 10,744 housing units not occupied were excluded.

12 Data include housing units with toilet(13,217) which are unknown whether they have water connections.

13 Data as received by the UN. However the sum of the individual categories differs from the total.

14 Data refer to private dwellings.

15 Data for running water only.

16 Data refer to the Government controlled area only.

17 Including the Indian-held part of Jammu and Kashmir, the final status of which has not yet been determined.

18 Figures exclude Assam and some areas where 1981 Census could not be conducted. Also, all figures refer to households, not housing units.

19 For piped water outside housing unit, there is no restriction of distance.

20 Data refer to housing units with septic tank.

21 Data refer to housing units without septic tank.

22 Including data for East Jerusalem and Israeli residents in certain other territories under occupation by Israeli military forces since June 1967.

23 Including East Jerusalem.

24 Excluding Jordanian territory under occupation since June 1967 by Israeli military forces.

25 Data refer to other types of water supply system.

26 Excluding Jammu and Kashmir, the final status of which has not yet been determined.

27 Data refer to buildings.

28 URBAN areas: communities with more than 5000 inhabitants.

29 RURAL areas: communities with less than 5000 inhabitants.

30 Data include housing units without flush toilet.

31 Data refer to the territory prior to 3 October 1990, i.e. to Federal Republic of Germany.

32 In Germany the distinction between urban and rural areas is not of great inportance. Therefore, "Urban" refers to "Kreisfreie Stadte" - that is a town not attached to administrative district (Landkreise). Rural refers to "Landkreise", that is an administrative district.

33 Privately-owned houses in rural areas are excluded.

34 Including 15,565 dwellings (housing units) with no information on densely/sparsely populated areas.

35 Data refer to conventional dwellings only.

36 Including conventional dwellings with unknown equipment.

37 Data refer to both occupied and vacant conventional dwellings.

38 Data refer to principal residences only. According to census definitions, principal residences refer to the housing unit occupied by one or more persons for the most part of the year. Secondary residence is a housing unit occupied seasonally and is not considered a usual residence.

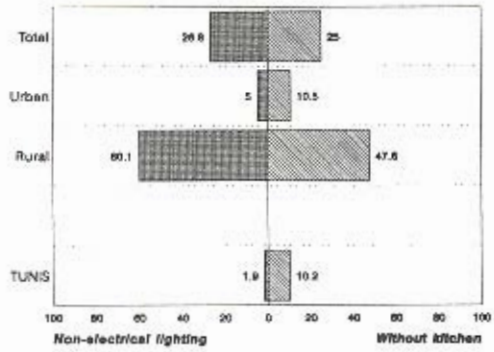

39 Data do not include facilities in privately-owned units in rural areas.

40 Water supply system - Inside housing unit - with connection to the public network.

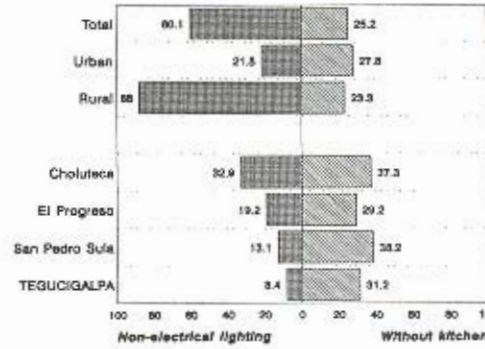

41 Water supply system - Outside housing unit but within 100 meters - with connection to the air compressed water tank.

Figure 19. Percentage of occupied housing units with non-electrical lighting and without kitchen or other space for cooking

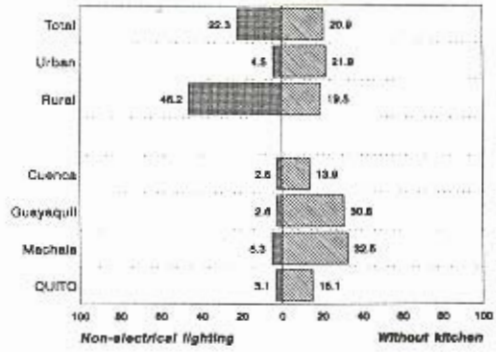

Tunisia, 1989

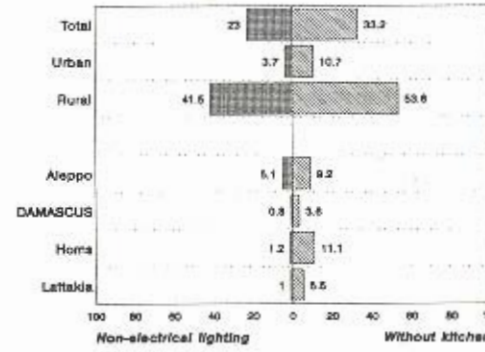

Honduras, 1988

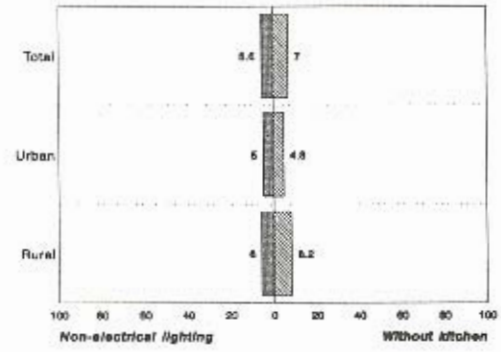

Ecuador, 1990

Syrian Arab Rep., 1981

American Samoa, 1990

Information for a country with the highest percentage of occupied housing units with type of lighting other than electricity and without kitchen or other space reserved for cooking by region is presented from data shown in Table 19. For countries or areas in Europe the percentage of occupied housing units with non-electrical lighting and without kitchen or other space reserved for cooking was negligible and therefore the graphical presentation for these countries or areas is not included.

19. Occupied housing units by type of lighting and cooking facilities: country or area, urban-rural areas, cities

(See notes at end of table.)

NOTES

1 Data as received by the UN. However the sum of the individual categories differs from the total.

2 Data are from the Population and Housing Census 1987.

3 Data refer only to units covered by the sample for the National Housing Survey 1986.

4 Source: Malawi National Housing Survey 1986 (unweighed sample)

5 Data refer to households in housing units.

6 Data may include "Oil lamp".

7 Data include "With kitchen" and "With other space reserved for cooking".

8 Data are presented in percentage.

9 Data refer to occupied units with permanent residents. Excluded are huts and natural shelters.

10 Data refer to gas, oil lamps and other.

11 Data refer to area reserved exclusively for cooking regardless of its size.

12 Data are estimated on the basis of 2.5 % sample.

13 Data exclude 11,763 "refugee" housing units which do not meet characteristics of a housing unit, also 136,341 housing units not occupied were excluded.

14 Data refer to housing units without electricity.

15 Data on cooking facilities refer to 11,895,206 housing units with separate kitchen and also 1,662,846 units that use the kitchen as a bedroom as well.

16 From these data, 2,507,894 housing units have separate kitchens and also 274,798 units use the kitchen as a bedroom

17 Data refer to kerosene.

18 Data refer to indoor kitchen.

19 Data refer to outdoor kitchen.

20 Data refer to private dwellings.

21 Data refer to the Government controlled area only.

22 Including the Indian-held part of Jammu and Kashmir, the final status of which has not yet been determined.

23 Figures exclude Assam and some areas where 1981 Census could not be conducted. Also, all figures refer to households, not housing units.

24 Including data for East Jerusalem and Israeli residents in certain other territories under occupation by Israeli military forces since June 1967.

25 Including East Jerusalem.

26 Excluding Jordanian territory under occupation since June 1967 by Israeli military forces.

27 Excluding Jammu and Kashmir, the final status of which has not yet been determined.

28 Data include 7,767 housing units without any source of lighting.

29 Data include 9,192 housing units without any source of lighting.

30 Data include 1,425 housing units without any source of lighting.

31 Included are housing units with other space reserved for cooking and housing units without kitchen or other space reserved for cooking.

32 Data refer to buildings.

33 URBAN areas: communities with more than 5000 inhabitants.

34 RURAL areas: communities with less than 5000 inhabitants.

35 Data include vacant housing units.

36 Data refer to the territory prior to 3 October 1990, i.e. to Federal Republic of Germany.

37 In Germany the distinction between urban and rural areas is not of great importance. Therefore, "Urban" refers to "Kreisfreie Stadte" - that is a town not attached to administrative district (Landkreiese). Rural refers to "Landkreise", that is an administrative district.

38 Including 15,565 dwellings (housing units) with no information on densely/ sparsely populated areas.

39 Data refer to conventional dwellings only.

40 Data refer to both occupied and vacant conventional dwellings.

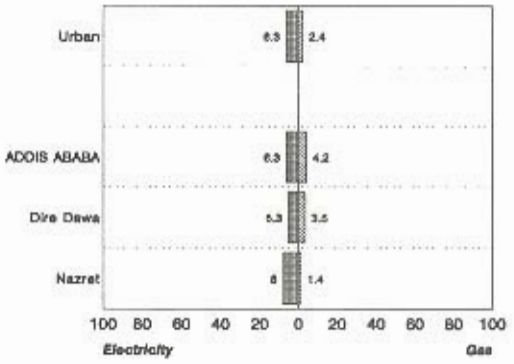

41 Data refer to principal residences only. According to census definitions, principal residences refer to the housing unit occupied by one or more persons for the most part of the year. Secondary residence is a housing unit occupied seasonally and is not considered a usual residence.

42 Data do not include facilities in privately-owned units in rural areas.

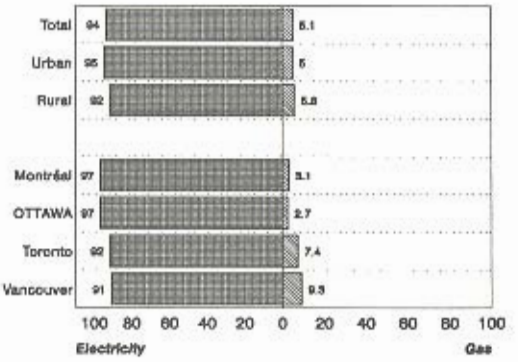

43 Data refer to units without power.

Figure 20. Percentage of housing units using electricity or gas as a cooking fuel

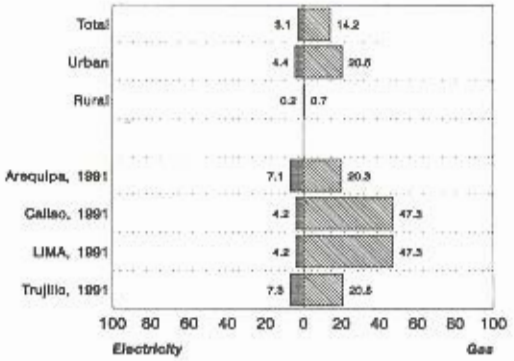

Ethiopia, 1984

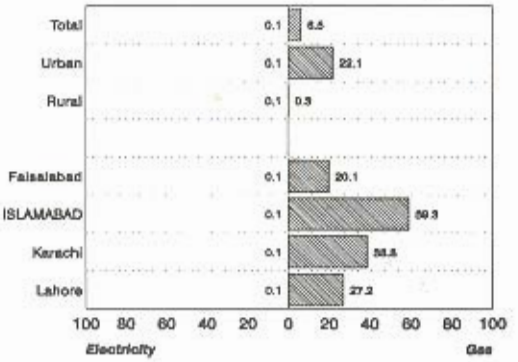

Canada, 1991

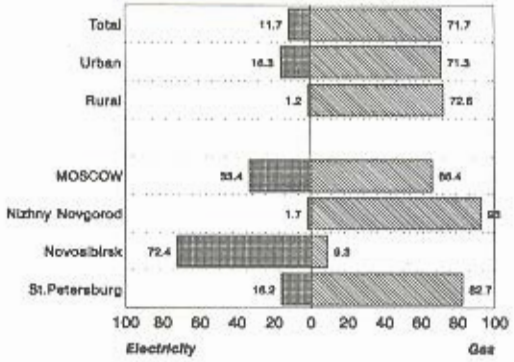

Peru, 1990

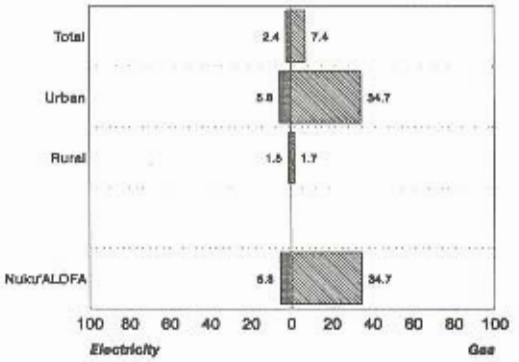

Pakistan, 1981

Russian Federation, 1989

Tonga, 1986

Information for the country with the largest number of housing units by region is presented from data shown in Table 20.

20. Occupied housing units by fuel used for cooking: country or area, urban-rural areas, cities

(See notes at end of table.)

NOTES

1 Data are from the Population and Housing Census 1987.

2 Data refer only to units covered by the sample for the NHS 1986.

3 Source: Malawi National Housing Survey 1986 (unweighed sample)

4 Data refer to households in housing units.

5 Data as received by the UN. However the sum of the individual categories differs from the total

6 Data are presented in percentage.

7 Category Other refers to electric hot plate.

8 Data refer to the following categories: Electricity, Gas and Coal.

9 Data refer to both 'wood' and 'other' as a fuel for cooking.

10 Data refer to oil as a fuel used for cooking.

11 Data refer to occupied units with permanent residents. Excluded are huts and natural shelters.

12 Data refer to both wood and coal.

13 Data refer to alcohol.

14 Data refer to units whose inhabitants do not use any cooking fuel.

15 Units with more than one modality were counted for each modality.

16 Data are estimated on the basis of 2.5 % sample.

17 Data refer to housing units without kitchen.

18 Data exclude 11,763 "refugee" housing units which do not meet characteristics of a housing unit, also 136,341 housing units not occupied were excluded.

19 Data refer to housing units that use petroleum for cooking.

20 Data refer to private dwellings.

21 Data refer to oil or kerosene used as cooking fuel.

22 Data refer to peat used as cooking fuel.

23 Data as received by the UN. However the sum of the individual categories differs from the total. Data could either be expressed in households and/or there could be a double counting of the type of fuel used for cooking!

24 Data refer to the Government controlled area only.

25 Including the Indian-held part of Jammu and Kashmir, the final status of which has not yet been determined.

26 Figures exclude Assam and some areas where 1981 Census could not be conducted. Also, all figures refer to households, not housing units.

27 Including data for East Jerusalem and Israeli residents in certain other territories under occupation by Israeli military forces since June 1967.

28 Including East Jerusalem.

29 Excluding Jordanian territory under occupation since June 1967 by Israeli military forces.

30 Data refer to households, not housing units.

31 Data refer to kerosene as a cooking fuel

32 Data refer to households that do not use any cooking fuel.

33 Excluding Jammu and Kashmir, the final status of which has not yet been determined.

34 Data refer to buildings.

35 URBAN areas: communities with more than 5000 inhabitants.

36 RURAL areas: communities with less than 5000 inhabitants.

37 Data refer to the territory prior to 3 October 1990, i.e. to Federal Republic of Germany.

38 In Germany the distinction between urban and rural areas is not of great importance. Therefore, "Urban" refers to "Kreisfreie Stadte" - that is a town not attached to administrative district (Landkreise). Rural refers to "Landkreise", that is an administrative district.

39 Including 15,565 dwellings (housing units) with no information on densely/sparsely populated areas.

40 Data refer conventional dwellings only.

41 Data refer to both occupied and vacant conventional dwellings.

42 Data refer to principal residences only. According to census definitions, principal residences refer to the housing unit occupied by one or more persons for the most part of the year. Secondary residence is a housing unit occupied seasonally and is not considered a usual residence.

43 Data do not include facilities in privately-owned units in rural areas.

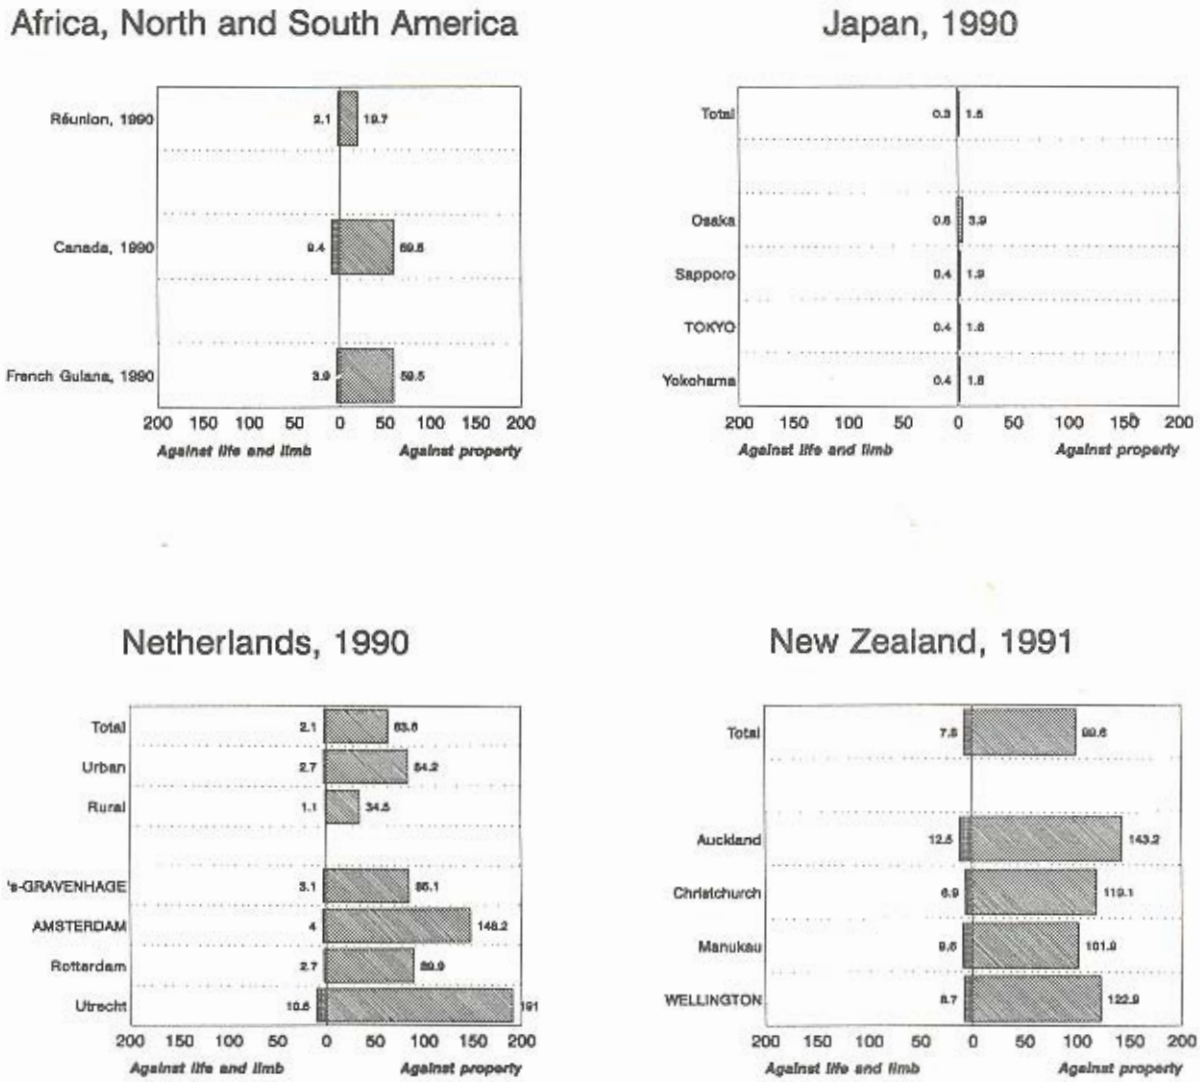

44 Data refer to units without power

45 Data are in percentage and were taken from the sample survey of 2,934 private households as a part of Household Expenditure and Income Survey.

46 Data refer to gas, coal, wood and other ranges.

47 Most homes have alternate sources of energy for cooking.

Figure 21. Rate of reported criminal offences against life and limb and against property per 1000 population

Information for the country with the highest rate of reported crimes against life and limb and gainst property by region is presented from data shown in Table 21. Due to the incompletness of data for countries or areas in Africa, North and South America, available data were presented in one graph.

21. Reported criminal offences by type of criminal offences and rate per 1000 population: country or area, urban-rural areas, cities

(See notes at end of table.)

GENERAL NOTES

All figures with "X" are provisional data.

NOTES

1 Included are "Public traffic" criminal offences.

2 Data refer to the Government controlled area only.

3 Data refer to violent crimes against a person.

4 Data refer to serious narcotic offences.

5 Excluding traffic offences.

6 Including the Indian-held part of Jammu and Kashmir, the final status of which has not yet been determined.

7 Data refer to murder, kidnapping.

8 Data refer to aggravated assault, assault, burglary, theft, robbery, blackmail, swindle, destruction.

9 Data refer to bribery, to receive bribe, money counterfeiting, seals, document and trademark forgery, embezzlement, economic crime and economic violation.

10 The total sum of all the categories exceeds the figures for all reported crimes as 'Death or Injury Resulting from Indecency through Compulsion' and 'Death or Injury Resulting from Rape' are included both in 'Life and limb' and 'Sexual Integrity'. Similarly, 'Death or Injury through Robbery' is included both in 'Life and limb' and 'Property', and 'Rape in the course of Robbery' is included both in 'Sexual Integrity' and 'Property'. The figures for reported crimes may include those crimes occurred in the suburb of respective cities.

11 Data as received by the UN. However, the sum of the individual categories differs from the total.

12 Included are felonies and misdemeanors.

13 Included are drugs and alcohol abuses.

14 Included are criminal offences against "Economy".

15 Data refer to commune of Plovdiv.

16 Life and limb includes assaults.

17 Property does not include assaults.

18 Data include homicides and bodily injuries.

19 For criminal offences of assault and drugs related data refer to the whole of Rhone department.

20 For criminal offences of assault and drugs related data refer to the whole of Bouches-Du-Rhone department.

21 Data include negligent manslaughters.

22 Data refer to province.

23 Comprises also all crimes registered in confinement institutions and by transport police.

24 Data refer to all transport.

25 Data as received by the UN. However, the sum of the urban and rural differs from the total.

26 Data include also crimes against the economy.

27 Data include all types of misdemeanors except traffic ones and data refer to 1990.

28 Data refer to rapes only.

29 Data refer to Stockholm, Gothenburg and Malmo metropolitan areas and to Uppsala community.

30 Data refer to England and Wales and are provisional court data for 1991. These data have been estimated, so they may not add up to the last two digits of the totals.

31 Data refer to The London Metropolitan Police District and are provisional court data for 1991. These data have been estimated, so they may not add up to the last two digits of the totals.

32 Data refer to deaths caused by dangerous driving.

33 Data refer to persons found in possession, selling or growing narcotic substances.

34 Data on reported crimes refer to the Auckland Central Police District and the population covered by this district differs from the population for the city itself. The population figure for the Police District was 292,758.

35 Data on reported crimes refer to the Christchurch Police District and the population covered by this district differs from the population for the city itself. The population figure for the Police District was 232,623.

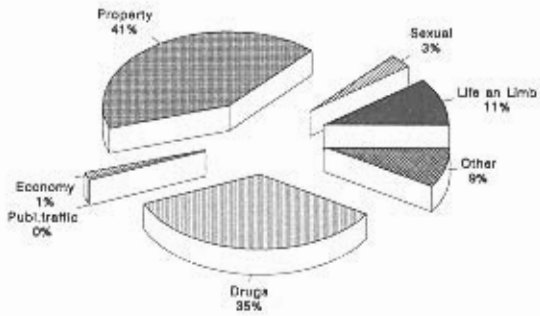

36 Data on reported crimes refer to the Manukau Police District and the population covered by this district differs from the population for the city itself. The population figure for the Police District was 190,767.

37 Data on reported crimes refer to the Wellington Police District and the population covered by this district differs from the population for the city itself. The population figure for the Police District was 135,681.

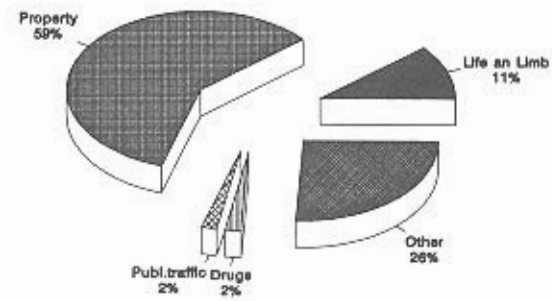

38 A traffic offence e.g. speeding or driving an unregistered vehicle is treated as a criminal offence on Norfolk Island. Assault charges (even if the results of it is a black eye) are criminal offences on Norfolk Island. There have not been any major criminal offences recorded on Norfolk Island during 1991.

Figure 22. Percentage of sentenced perpetrators of criminal offences by type of criminal offence

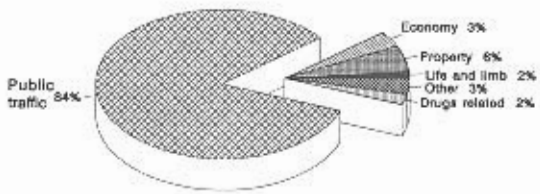

PANAMA CITY, 1991

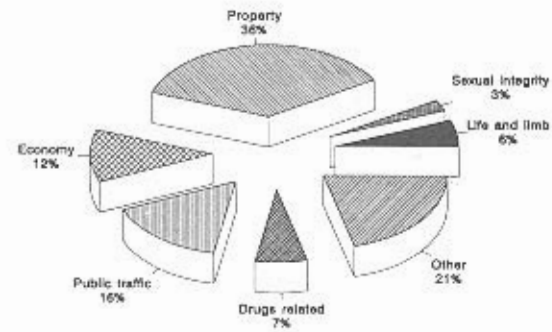

LIMA,1989

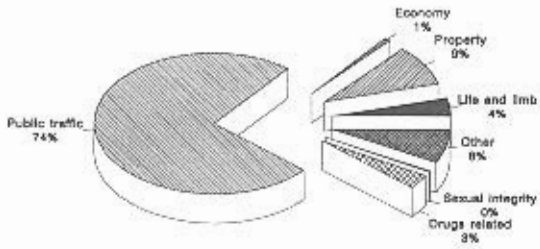

TOKYO, 1990

PARIS, 1990

NEW ZEALAND, 1990

Information for the city with the highest number of sentenced perpetrators of criminal offences by region is presented from data shown in Table 22. For cities in Africa this information was not available, and similarily, for cities in Oceania. However, for the latter, data for New Zealand were included.

22. Sentenced perpetrators of criminal offences by type of criminal offence: country or area, urban-rural areas, cities

(See notes at end of table.)

NOTES

1 Judicial data from the Supreme Court of Justice.

2 Data as received by the UN. However, the sum of individual categories differs from the total.

3 Data refer to the Government controlled area only and included are only serious offences.

4 Adults refer to persons 16 years and over.

5 Juveniles refer to persons under the age of 16.

6 Including the Indian-held part of Jammu and Kashmir, the final status of which has not yet been determined.

7 Adults refer to persons aged 21 and above.

8 Juveniles refer to persons under age 21.

9 Included are criminal offences against "Economy".

10 Adults refer to persons aged 19 and above as of 01/01/1989.

11 Juveniles refer to persons under age 19 as of 01/01/1989.

12 Life and limb includes assaults.

13 Property does not include assaults.

14 Data include negligent manslaughters.

15 Data refer to province.

16 Total includes 45 persons of unknown age.

17 Data include also crimes against the economy.

18 Public traffic misdemeanors can not be further specified and data relate to 1990.

19 Data include all types of misdemeanors except traffic ones and data refer to 1990.

20 Total includes 4 persons of unknown age.

21 Total includes 41 persons of unknown age.

22 Data refer to rapes only.

23 Data refer to the District of Brasov. Approximately 55% of these figures refer to the City of Brasov itself.

24 Data refer to the District of Constanta. Approximately 75% of these figures refer to the City of Constanta itself.

25 Data refer to the District of Temisoara. Approximately 65% of these figures refer to the City of Temisoara itself.

26 Data refer to Stockholm, Gothenburg and Malmo metropolitan areas and to Uppsala community.

27 Data refer to England and Wales and are provisional court data for 1991. These data have been estimated, so they may not add up to the last two digits of the totals.

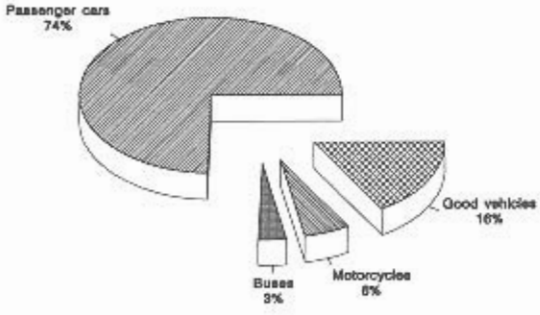

28 Data refer to the categories 'Adults', ages 21 and over and to 'Young Adults' ages 17-20.

29 Juveniles refer to ages 10 and under 17.

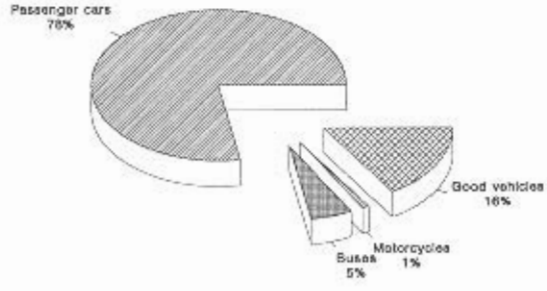

30 Data displayed represent a sum of cases appearing in the District Courts (a person is aged 17 years or more), cases appearing in the Youth Courts (a person is aged 14-16 years) and Trial Courts - adults are defined as persons aged 18 years or more, and juveniles refer to persons aged 17 years or under.

Figure 23. Percentage of road vehicles by type

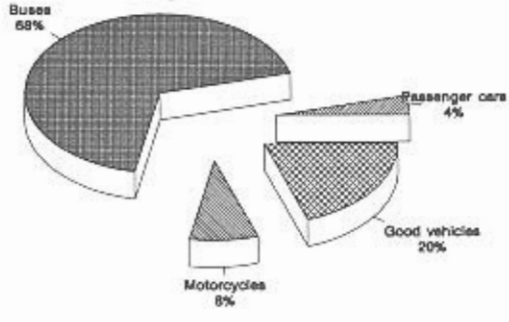

JOHANNESBURG, 1991

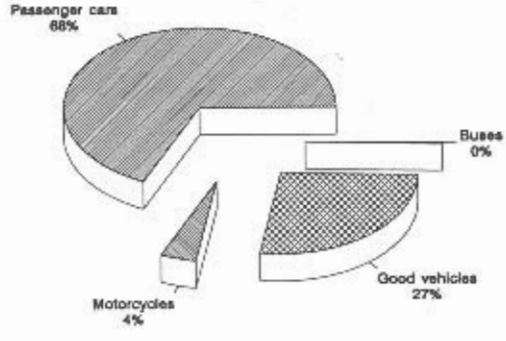

PANAMA CITY, 1991

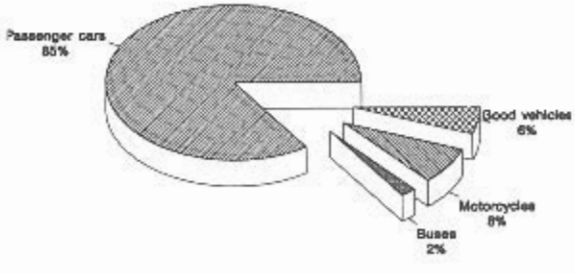

ASUNCION, 1982

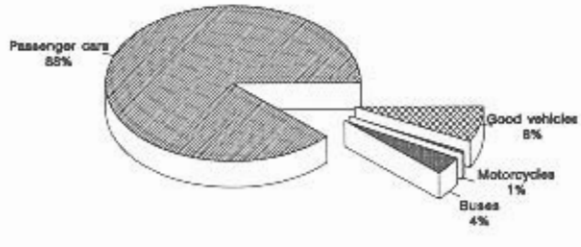

TOKYO, 1991

MOSCOW, 1989

PAGO PAGO, 1990

Information for the city with the highest number of road vehicles by region is presented from data shown in Table 23.

NOTES

1 Data refer to the island of St. Thomas.

2 Data refer to the Government controlled area only.

3 Including taxis and hired vehicles with less than ten seats (school hired car, tourism car and rental car).

4 Including public buses, tourism buses, school buses and rental buses.

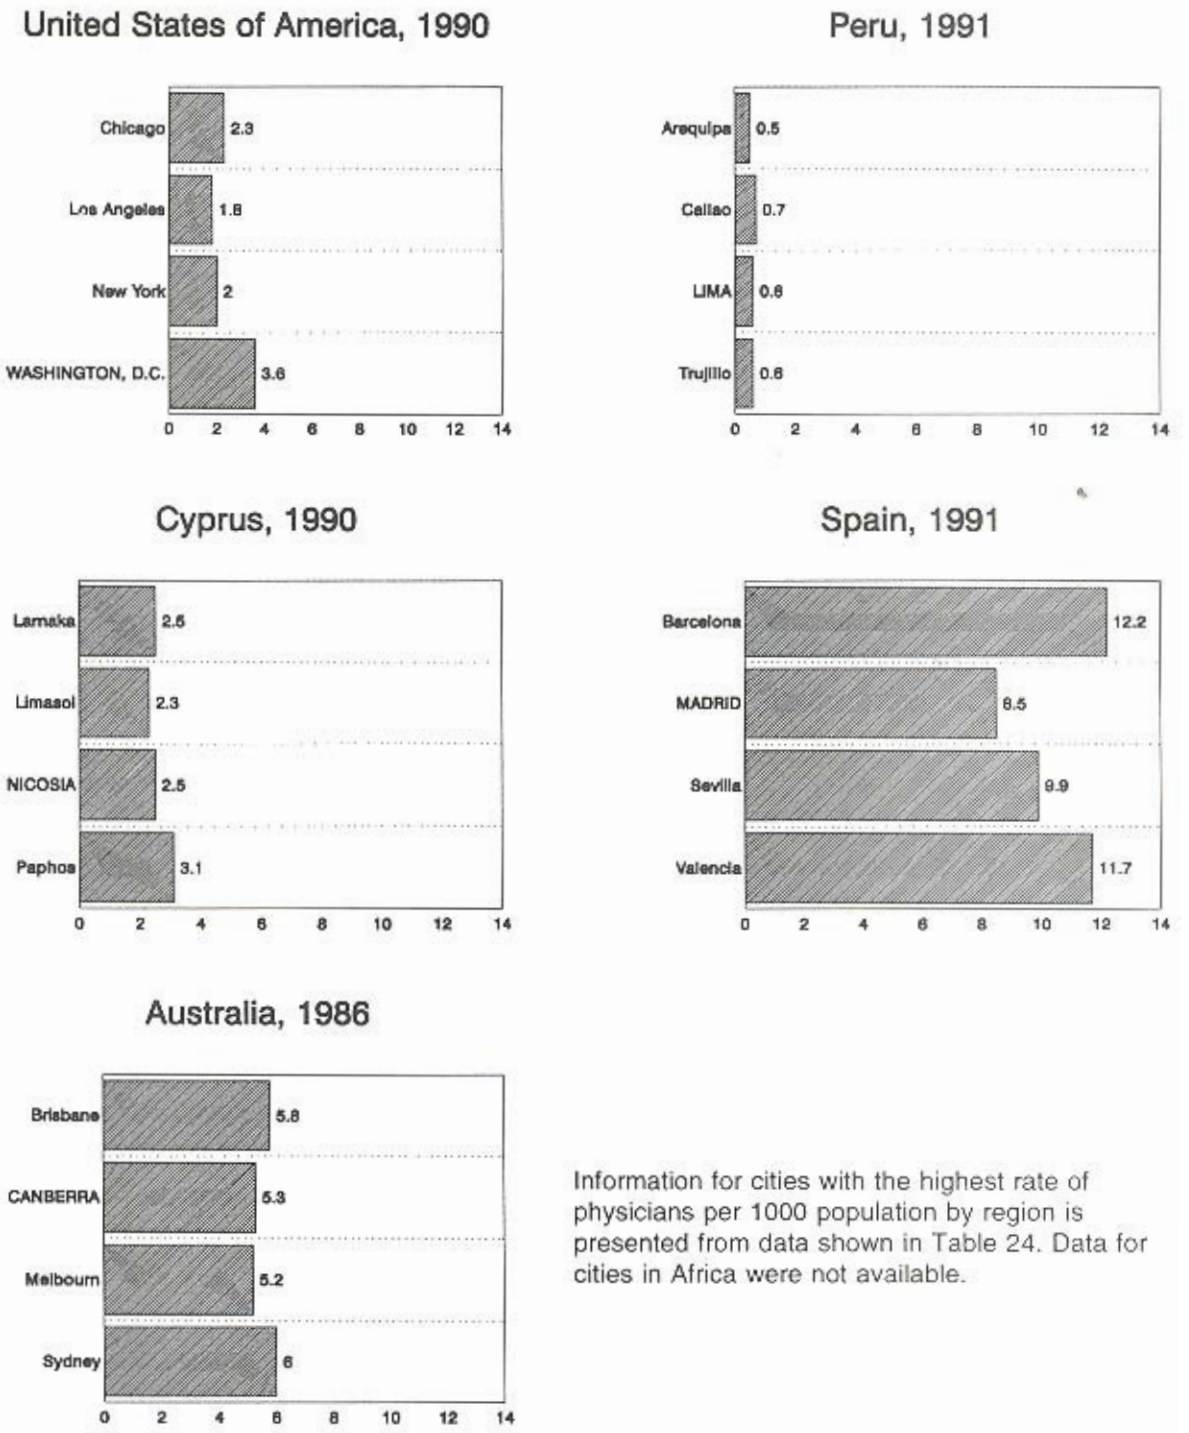

5 Total number of motor vehicles includes 9,358 exempted vehicles.

6 Passenger cars are those which have seating for not more than eight persons (including the driver).

7 Data refer to passenger cars, buses, good vehicles and others.

8 Lorries with platforms and trailers are excluded.

Figure 24. Physicians per 1000 population

Information for cities with the highest rate of physicians per 1000 population by region is presented from data shown in Table 24. Data for cities in Africa were not available.

24. Number of hospital establishments, number of physicians and rate per 1000 population, crude birth rate, crude death rate and infant mortality rate: cities

(See notes at end of table.)

NOTES

1 The figure for the Number of Physicians is for those under the Ministry of Health.

2 Data refer to 1988/1989 and the Black population only. The crude birth rates for the White and the Colored population are 12.20 and 21.30 respectively.

3 Data refer to 1988/1989 and the Black population only. The crude death rates for the White and the Colored population are 10.30 and 7.70 respectively.

4 Data refer to 1986 and the Black population only. The infant mortality rates for the White and the Colored population are 8.80 and 19.30 respectively.

5 Included are hospitals, polyclinics and stomatological clinics.

6 Data refer to public institutions only.

7 Data refer to community hospitals. Excluded are psychiatric hospitals.

8 Data refer to the Metropolitan Statistical Area (MSA).

9 Data refer to 1988.

10 Data refer to 1989.

11 Data refer to the island of St. Thomas.

12 Data refer to the Government controlled area only.

13 Registered on the local list of the Hong Kong Medical Council.

14 Data refer to 1991.

15 Data on refer to 1981.

16 Data refer to 1985.

17 Included are part-time physicians and oriental medical doctors. The number of oriental medical doctors in Incheon in 1990 was 139.

18 Included are part-time physicians and oriental medical doctors. The number of oriental medical doctors in Pusan in 1990 was 464.

19 Included are part-time physicians and oriental medical doctors. The number of oriental medical doctors in Seoul in 1990 was 1874.

20 Included are part-time physicians and oriental medical doctors. The number of oriental medical doctors in Taegu in 1990 was 389.

21 Demographic indicators refer to Singapore residents only (citizen and permanent residents).

22 Data refer to the territory prior to 3 October 1990, i.e. to Federal Republic of Germany.

23 Data refer to hospitals only.

24 Data include Manukau figures.

25 Data on the number of physicians refer to the Health Board Area of Auckland which covers larger area than the city itself and include Manukau figures. The total population covered by the Auckland Health Board Area was 948,375.

26 Data on the number of physicians refer to the Health Board Area of Christchurch which covers larger area than the city itself. The total population covered by the Chirstchurch Health Board Area was 436,290.

27 Data are included in the Auckland figures.

28 Data on the number of physicians refer to the Health Board Area of Wellington which covers larger area than the city itself. The total population covered by the Wellington Health Board Area was 390,612.

29 Including 2 hospitals.

30 Not included are Technical Aid Volunteers.

Figure 25. TV sets/receivers per 1000 population

Information for cities with the highest rate of TV sets/receivers per 1000 population by region is presented from data shown in Table 25. Data for cities in Africa were not available.

25. Telephone lines, TV's and circulation of daily newspapers, number and rates per 1000 population, number of cinemas, number of public parks and area (in square kilometers): cities

(See notes at end of table.)

NOTES

1 The figure for the Number of Cinemas is for those under Ethiopian Film Corporation.
2 Estimate.
3 Data refer to the island of St. Thomas.
4 Data refer to the Government controlled area only.
5 Data refer to 1990.
6 Included are country parks and 1018 gardens which are less than 1 hectare.
7 Data refer to 1992-1993.
8 Data refer to 1992.
9 Data refer to 1988.
10 Number of TV refers to licences issued.
11 Data on "Number of telephone lines" are provisional and refer to 1991.
12 Data refer to commune of Plovdiv.
13 Data refer to 1991.
14 Data refer to 1985.
15 Data refer to the total number of printed newspapers, not their circulation.
16 Data refer to telephone subscribers.
17 Data refer to the number of fixed cinema apparatus.
18 Data refer to 1989.
19 Data refer to the whole American Samoa.
20 Data on "Number of telephone lines" include Manukau figures.
21 Data are included in the Auckland figures.

Figure 26. Consumption of water - liters per capita per day

Information for cities with the highest consumption of water expressed in liters per capita per day by region is presented from data shown in Table 26.

26. Consumption of water (in thousand cubic meters) and liters per capita per day, consumption of electricity (in thousand KWh), total, in households, Kilowatt-hours per day per capita and percentage of household consumption in total consumption, number of schools by type: cities

(See notes at end of table.)

	Water consumption		Consumption of electricity				Schools by type		
	Total (000 m³)	Liters per capita per day	Total (000 KWh)	KWh per capita per day	Household consumption (000 KWh)	Share of household consumption in total consumption (%)	Primary	Secondary	Universities and other institutions

NOTES

1 Data refer to 1990.

2 Data refer to 1991.

3 Data refer to the islands of St. Thomas and St. John.

4 Data refer to the island of St. Thomas.

5 Data refer to the Government controlled area only.

6 Including Technical and vocational training and special education schools.

7 Data refer to 1993.

8 Data refer to 1992.

9 Secondary school is middle school and high school.

10 Including junior college and teacher's college.

11 Including Nonthaburi and Samut Prakan.

12 Including Nonthaburi, Pathum Thani and Samut Prakan.

13 UN-estimate. Original data referred to 260 liters per inhabitant per day.

14 Primary schools: Lower comprehensive schools, special comprehensive school, teacher training schools, other comprehensive schools.

15 Secondary schools: Upper comprehensive schools, private comprehensive schools, senior secondary day and evening schools, other general education institutions, vocational and professional education institutions, other educational institutions within the formal education system.

16 UN-estimate. Original data referred to 321 liters per inhabitant per day.

17 UN-estimate. Original data referred to 327 liters per inhabitant per day.

18 UN-estimate. Original data referred to 320 liters per inhabitant per day.

19 Data refer to household consumption only.

20 Data refer to both primary and secondary schools.

21 UN-estimate. Original data referred to 498 liters per person per day.

22 Data refer to the beginning of September 1991 school year.

23 UN-estimate. Original data referred to 418 liters per person per day.

24 UN-estimate. Original data referred to 440 liters per person per day.

25 UN-estimate. Original data referred to 371 liters per person per day.

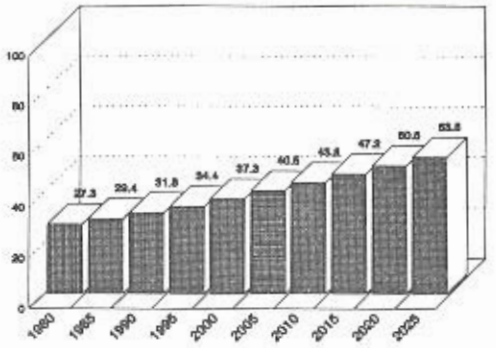

26 Data refer to the whole American Samoa.

27 Data is converted from 1.9 billions of gallons.

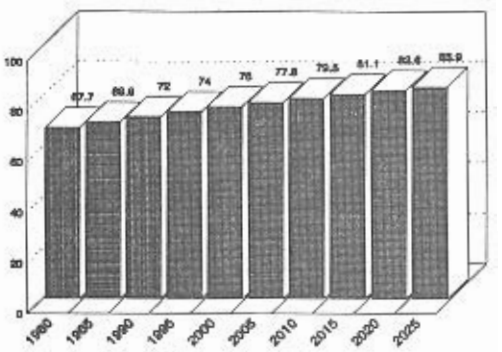

28 Data refer to 4 colleges and 1 Lycee.

Figure 28. Percentage of urban population residing in urban agglomerations by the size of agglomeration and continent, 1980 and 2015

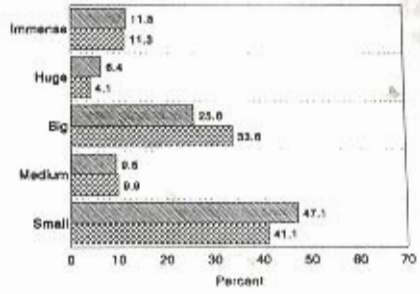

For the purpose of graphical presentation, the attributes reffer to the size of urban agglomerations as follows:
Immense - urban agglomeration with the population of 10 million and over
Huge - urban agglomerations with the population from 5-10 million
Big - urban agglomeration with the population from 1-5 million
Medium - urban agglomeration with the population 500,000-1 million
Small - urban agglomeration with the population under 500,000

Legend: The first horizontal bar under each category refers to 1980, and the second to 2015.

Figure 29. Urban agglomerations with population 750,000 and over in 1990 by country or area

Presented is the number of urban agglomerations with population 750,000 and over in 1990 by country or area and region. Displayed are only countries or areas with two or more urban agglomerations with population 750,000 and over. Detailed data are shown in Table 29. Data for Europe and Oceania are presented in one graph since only one country in Oceania had two or more urban agglomerations of the above-mentioned size.

29. Population (in thousands) of urban agglomerations comprising 750,000 or more inhabitants in 1990 for country or area, 1980-2015

Figure 30. Percentage of total population residing in urban agglomerations with 750,000 or more inhabitants in 1995 by country or area

Percentage of total population residing in urban agglomerations with 750,000 or more inhabitants for 10 countries or areas in each region that had the highest percentage is presented from data shown in Table 30. Only 9 countries or areas in South Amrica had urban agglomerations of the size mentioned above. Similarily, only two countries in Oceania had urban agglomerations of that size and are presented together with countries or areas in Europe.

30. Percentage of total population residing in urban agglomerations with 750,000 or more inhabitants in 1990 for country or area, 1980-2015

	Population residing in urban agglomerations with 750,000 or more inhabitants in 1990 (%)
